Badger game!

you show up,
Alice gets all comfy..
YOu get comfy..
& Alice puts on one of her favorite Videos..

The Larry shows up, drunk, with a Shotgun..
real reall mad..
YOu leave with your privates..,
wallet stays behind..

..

2. For Trade: R8A for SW8

Hi-

I'm using Rory Davis' Palm software to drive my Ten-Tec 321, it was the
only Palm software I could find. What other Palm apps are available?

Thanks
Mike

I see he is already posting under his Alice name on this group. Maybe
he puts on the "wimmins" clothing and then his alter ego takes over???

He'll say that he isn't alice, but a quick search shows "Alice" posting
using the same goofy language Cuhulin uses. He must have forgotten to
change identities before changing his posting styles.....:-)

Source record: 20691

I've owned both of these radios, and both are stellar performers, as far as portable shortwave receivers go. Nowadays, partly due to living circumstances that leave the tabletop receivers in mothballs, the SW77 tends to be my most used receiver. Compared to the '2010, the SW77 has tighter bandwidth filters (w/the '2010, I tended to listen almost exclusively using the narrow bandwidth). While I've never done a side-by-side comparison of the SW77 and '2010, I must say that the selectivity of the SW77 has more than once surprised me (e.g. recently, while here on the east coast of the US, I was able to get a pretty decent fix on Radio Nacional de la Republica Arabe Saharaui on 7460 kHz, despite the strong presence of WWCR on 7465 kHz). It's true that the audio on the SW77 can sound at times a little muffled, as compared to the '2010. Sometimes this can be remedied by offsetting from the desired signal's frequency by a kHz or two. The SW77 is pretty decent on batteries, I've found, and that's been a big plus for me in recent times, as I tend to use this radio out of doors quite a bit. Although I didn't use the '2010 on batteries too terribly often, it does seem that, on the whole, the SW77 is better on batteries. Also, I'd prefer the SW77 on single sideband reception. Overall, in most instances, there's probably not going to be an appreciable difference between the two in terms of performance. FM reception on my SW77, however, is not up to par. I'm not sure what the problem is, but it's a factory defect, and I know that there are a few threads here in this group which go into the problem. While I don't use this unit for FM reception, the problem is such that with certain types of music that I don't listen to (e.g. hip-hop), there can be distortion when there's a heavy beat the music. For listening to talk on FM, it has never given any problem. I mention this issue because I know that I'm not the only one who has had this problem with FM reception on the SW77. My main complaint with the SW77, however, is the chugging that accompanies bandscanning with the tuning wheel. It's bad. While the '2010 also has some chugging to its tuning wheel, I think it's fair to say that the problem is a bit worse on the SW77. For the shortwave broadcast listener, 5 kHz up-down slewing buttons would have been a plus, given this chugging problem. But if you use this unit enough, the fingers become trained to, with an upward motion with the index finger and a downward motion with the middle, tune upward in 5 kHz increments using the tuning wheel/disc. The signal strength meter is much better on the '2010; that of the SW77 tends to grossly overread. Presumably, people can be confused by the controls on either of these two sets, but really it doesn't take much to get the hang of either. For the avid program listener, the memory programming on the SW77 can be a nice plus. Really, though, you can't go wrong with either one of these radios.

3960 KHz LSB Liberty Net.

Sighted, as in found, not as in cited, but even cited may be positive. Cite is a multifaceted word indeed. Definition 3a applies.

Dr. Artaud

http://www.m-w.com/cgi-bin/dictionary?book=Dictionary&va=cited&x=12&y=18

"Etymology: Middle French citer to cite, summon, from Latin citare to put in motion, rouse, summon, from frequentative of ciEre to stir, move -- more at -KINESIS

1 : to call upon officially or authoritatively to appear (as before a court)

2 : to quote by way of example, authority, or proof

3 a : to refer to; especially : to mention formally in commendation or praise b : to name in a citation

4 : to bring forward or call to another's attention especially as an example, proof, or precedent"

Ambassadors for the US are political appointees, meaning for the most part people that the President owes a favor to (or their families or companies). They are NOT career diplomats with extensive knowledge of their host countries. Canada may have higher standards. But most US ambassadors don't know the language of their host countries, much less any of the country's vital stats. Wilkins got an easy assignment-Canadian English is pretty close to American English, except Canadians use British spelling. It may be fun for the Canadians to put Wilkins on the hot seat and laugh at him for being an idiot, but he is the rule rather than the exception. Ambassadors for the US are Pretty Faces, meant to look good and take all the credit for the grunt work of lower level staffers, the people who know everything about the country and advise the guy at the top. This is also common within the US-the politicians are bloviators who posture while the lower level guys keep the country running but get none of the credit. Hell, America even had a president with early stage Alzheimer's serve for eight years, and he was incredibly popular and remains so even after his death. Reagan faced down the Soviet Union and got the economy going again after a decade of stagnation, yet he couldn't remember the names of his cabinet secretaries. As for the seat's current occupant, he has been affected by heavy alcohol and cocaine use, has suffered a number of mini strokes, and wears a defibulator (sp?) in case his heart quits without warning, yet the country still functions. Would you rather have a dictatorship on your border where a fatal heart attack means all out civil war?

While in my local Walgreens to pick up toothpaste, I noticed that they
are selling a very small, analog "world band" radio called a "Lifelong".
They had it behind an unstaffed counter, so I didn't get too close of a
look. Typical low end Chinese item, as is the rest of the electronics
put out under the Lifelong name. Anybody know who makes this particular
radio? Is it a Sangean Travel Pro model?

Just another _dumb_ WebTVer here! :))

Your wish won't happen i'm afraid!
Perhaps even less likely seeing as how the abusive language is tossed equally towards Larry by some here. By that I mean, how can you complain about his attacks when people here attack him also? Just my personal opinion here.

Take it from me, I sent so many of his rants to abuse, I wore out my keyboard!
"We" tried everything to rid our peaceful fun loving group of Larry for the better part of a year without success.

As some have suggested, about the only thing you can do is ignore, kill file, etc., as he won't leave voluntarily from all that I have seen.

I do know of something that may work for you folks but you will have to e-mail me for what I have to offer. I will not post it here for my own reasons. I can only relate my own experience and what happened and you can judge it for yourself.

And for what it's worth, I have had more than a few laughs reading this group and your "love" of said subject!..LOL

Have a good day! :)

uncle arnie <unclearnie@nowhere.at.all> wrote in
news:1177n1vgnjemq1b@corp.supernews.com:

I wonder if he knows how to say Quebec?

Originally pronounced qwa beck, or (long A) Ka Beck, it has now morphed into (short I) Ki beck (as in kite). Amazing how a word can change over 10 years or so.

Anyone worth their muster MUST say (short I) Ki beck, it's infested the American sportscasters as well. I can't even listen to the Canadian news shows, since they also have shed ules (schedules), yet their kids go to school, said as we say it, they don't go to shoe ools.

I once heard that Canadians in general try to be more British than the British, and the Quebecers try to be more French than the French.

Though they desire to remain neutral in world politics, I thought it ironic that they didn't want any missile defense to include Canada as well. This will force the U.S. to protect the northern U.S. borders. I wonder where the debris would land?

It's a shame when China outstrips Canada concerning the Space Program as well. Q.V. http://space.about.com/b/a/118894.htm

"Saskatchewan Town Prepares For Launch of Canadian Rocket
CBC News reports that the da Vinci project aims to send the first Canadian rocket into space, launching from Kindersley, Sask.

The Toronto-based da Vinci team had planned to enter the X Prize contest, a private space race, with a launch from the Kindersley airport on Oct. 2. The launch was put on hold indefinitely, however, because an important part of the spacecraft hadn't arrived."

I like Canada, I just don't like condescending Canadians.

Pete,

Do you think the 1N5767 would be a good choice for replacing the
switching diodes in the front-end bandpass filters of the R8? Also, have
you ever considered a better roofing filter for the R8?

Thanks

Since there is nothing on the RNZ web site I emailed them and got this
response.

I'm not getting them tonight on 15,720.

Maybe they will show up on 11,820 at 04:59 UTC.

Dear Sir

Thank you for your email.

The RNZI transmitter was off air for Maintenance.

Adrian Sainsbury
Tecnical Manager

RNZI

>>> Telamon <Telamon@pacbell.net> 29-Apr-05 6:11 PM >>>
Dear Sirs,

I have been looking for your transmission today without success today
on 15,720 and now 11,820 in the 03:30 to 06:00 time frame. Radio New

Zealand usually puts in a good signal during these times and I suspect that you are off the air.

When do you think the problems will be resolved and New Zealand is back on the air?

Telamon

The later version of the SW8 (starting in 1996) have a much better sync'
detector than either the R8 or R8A.

It wouldn't hurt to power it up for a few hours at least once a year to
keep the electrolytic capacitors conditioned for use.

24. PopCom Editor comes to Feeding Hills, MA - May 6th

Newsgroup: rec.radio.shortwave
Date: 2005-05-01 04:06:24 UTC
From: "Jim, KK1W" <kk1w@charter.net>
Message-ID: <4BYce.26959$Ow2.14229@fe06.lga>
Source record: 20558

From: "Jim, KK1W" <kk1w@charter.net>
Subject: PopCom editor comes to Feeding Hills, MA - May 6, 2005
Date: Tuesday, April 12, 2005 8:11 PM

Harlold Ort - N2RLL comes to the HCRA!

Mark your calendars now for a meeting with Harold Ort - Editor of Popular Communications Magazine. Mr.Ort will be addressing the members and guests of the Hampden County Radio Association in Feeding Hills, MA.

Popular Communications is the premier magazine for all types of radio enthusiasts. With regular monthly columns from SWL to scanners, utility to ham radio PopCom has something for everyone. N2RLL will have the latest and greatest information about radio listening for everyone attending.

The meeting will be at the regular HCRA meeting place in Feeding Hills, MA, the Feeding Hills Congregational Church.

Feeding Hills Congregational Church
21 North Westfield Street
Feeding Hills, MA 01030

Date: May 6, 2005
Time: 7:30 PM

You don't need to be a member of HCRA to come to the meeting. Everyone is always welcome, all you need is an interest in radio communications. I can assure you it will be time well spent.

To celebrate the SWL nature of tonight's meeting the raffle prize will be a Sangean ATS-505P portable shortwave radio. For as little as a $1 donation you could go home with a radio worth over $100!

Because of the expected crowd, our regular club business will be postponed until the June meeting. In addition to Mr.Ort's presentation there will be coffee, donuts and other refreshments available and as usual a fantastic raffle.

If you are close to Feeding Hills, MA it is our genuine hope to see you at the meeting. Visit our web site for additional information, other club events and directions to the meeting.

Why so much money? This was only a 30 dollar receiver in its day. It wasn't bad...I had a couple of them years ago.

This is what a free country is all about. Anyone can run for office,
even legal emigrants once they become citizens, with a few exceptions
such as the office of the president. Pretty exciting stuff when you
think about it. I would not want to subject myself a ruling elite.

Like any service to country serving as a representative is a duty not a
privilege and you are not supposed to use the position to enrich
yourself. The people that do get caught and pay the price.

But there are always exceptions like people that get elected many times
and they start to think they are better than the common man. There are
some that abused their position in the media and government.

The USA is a government by the people, for the people and of the people
not some ruling elite.

It's really heavy, had a lot of DJ type features with the wheel and
stuff. You could slam your fist down next to it, hard enough to make it
bounce, and it just played on. It still works fine, but the display is
barely visible without any lights on...too bad, it looks new.

Well, it had it's faults, one, the tuner was kind of noisy, digital
receivers weren't that great yet. Two, it was a hot runner, even just
sitting there listening to headphones. Three, it had a lot of cold
solder joints on the preamp section that we finally solved by taking it
apart (what an amazing amount of of screws and stuff) and pulling the
preamp out and hitting every joint that didn't look perfect. That fixed
it and it ran fine until 91 or so, when the transformer smoked itself.

Blueberry's a she-dog.

Cattledogs are smart...-damned- smart. I would imagine that their standards
are on the high side as well.

Question: Why was Blueberry licking her anus?

Answer: To get the taste of Cuhulin out of her mouth.

36. Handy Shortwave Chart

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

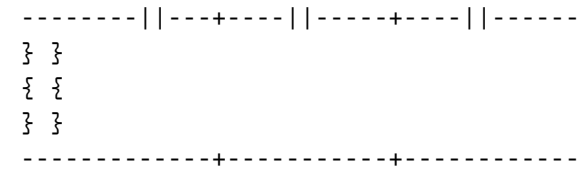
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

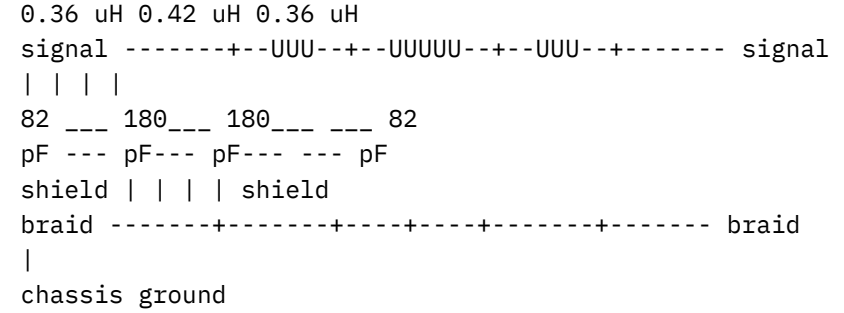
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

If you heard a talk format, there's a good chance it was KDWN here in
Las Vegas. I believe most of the overnight talk is produced locally,
not piped in via satellite.

You obviously have better (newer and more accurate) sources of info than the original poster. Why would he post something that's some nine months old as newsworthy?? Could it be the likelihood that there are no other favorable ratings since to mention? I thought I read a post that placed WLIB down to 24th place or so in some time slot. I doubt if WABC would ever drop so low for any of its time slots unless it's for some extremely insignificant demographic subset.

BTW, what is the Dem/Rep ratio in the WLIB area of the NYC market? Probably around ten to one or so?

52. Bro. Stair's WWCR time

Newsgroup: rec.radio.shortwave
Date: 2005-05-01 14:42:01 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <1179qlof5vaiqe7@corp.supernews.com>
Source record: 20586

Bro. Stair, who says he is NOT decreasing air time overall, is really cutting back on WWCR. He just stated that he *knows* he'll have four hours on 5070 because those are still under contract. They are 2-4 AM and 5-7 AM. He is "not sure" about the other times right now.

If those four hours wind up being all he is on WWCR that will be a tremendous cut back. He has been on about 30 hours per day or more on WWCR. One transmitter was 24/7 plus he was on other transmitters part time. He'll probably know in the next day or two exactly how much WWCR time he has.

He must be adding a lot of air time on transmitters elsewhere.

He *seems* sometimes to know the Anglo-Israel truths taught by Pastor Peters, but then he also *seems* to re-interpret them to apply to whoever professes to know Jesus Christ.

Concerning the New Covenant:

Hebrews 8:8, "☐However, He finds fault with them [showing its inadequacy] when He says, Behold, the days will come, says the Lord, when I will make and ratify a new covenant or agreement with the house of Israel and with the house of Judah."☐

Christ sends out the twelve:

Matthew 10:5 ☐Jesus sent out these twelve, charging them, Go nowhere among the Gentiles and do not go into any town of the Samaritans;☐

6 ☐But go rather to the lost sheep of the house of Israel.☐

7 ☐And as you go, preach, saying, The kingdom of heaven is at hand!

Christ's own mission, revealed in his dealings with the Canaanite woman:

Matthew 15:24 ☐He answered, I was sent only to the lost sheep of the house of Israel.☐

These quotes are from the Amplified Bible.

Other New Testament references to "house of Israel" are:

Acts 2:36, Therefore let the whole house of Israel recognize beyond all doubt and acknowledge ...

Acts 4:10, understood by all of you, and by the whole house of Israel, that in the name and through the power ...

Acts 7:42, forty years in the wilderness (desert), O house of Israel?
[Jer. 19:13.] 43 [No!] You took up the ...

Hebrews 8:10, is the covenant that I will make with the house of Israel
after those days, says the Lord: I will ...

55. Re: DX-394 questions for Pete KE9OA

Newsgroup: rec.radio.shortwave
Date: 2005-05-01 15:04:35 UTC
From: Tom Holden <holden_family@sympatico.ca>
Message-ID: <7e6de.1870$VL3.23337@news20.bellglobal.com>
Source record: 20593
Body handling: HTML body converted to readable text

Hi Pete,

At 10mA, the stock RF bandswitching diodes in the DX-394 for the SW bands is spec'd to have a resistance of about 0.2 ohms, or 1/20 that of the 1N5767 PIN diode, and a capacitance of about 0.6pF with a reverse bias of 13V. The Hitachi HSU277 is described as a Silicon Epitaxial Planar Diode for UHF/VHF tuner Band Switch. I cannot tell from the spec sheets why a PIN diode would be superior in this application. What should I be looking for? Do you think there is much to be gained by replacing them?

BTW, the LW/MW bandswitching diodes are Toshiba 1SS272 Silicon Epitaxial Planar with no spec for the resistance and a capacitance of about 0.8 pF.

73, Tom

P.S. - sorry, I first sent this privately by accident. We'll assume others are interested!

We all pay for other people in this country. So don't be such a martyr.
```

Fundamentalists don't vote as a rule. They don't trust either party.
There needed to be a volatile issue to get them out.

This is the most important question of your life.

The question is: Are you saved?

It is not a question of how good you are,
nor if you are a church member, but are you saved?

Are you sure you will go to Heaven when you die?

The reason some people don't know for sure if they
are going to Heaven when they die is because they
just don't know.

The good news is that you can know for sure that
you are going to Heaven.

The Holy Bible describes Heaven as a beautiful
place with no death, sorrow, sickness or pain.

God tells us in the Holy Bible how simple it is
to be saved so that we can live forever with Him
in Heaven.

"For if you confess with your mouth Jesus is Lord
and believe in your heart that God raised Him from
the dead, you WILL BE SAVED." (Romans 10:9)

Over 2000 years ago God came from Heaven to earth
in the person of Jesus Christ to shed His blood
and die on a cross to pay our sin debt in full.

Jesus Christ was born in Israel supernaturally to
a virgin Jewish woman named Mary and lived a sinless
life for thirty-three years.

At the age of thirty-three Jesus was scourged and
had a crown of thorns pressed onto His head then
Jesus was crucified.

Three days after Jesus died on a cross and was
placed in a grave Jesus rose from the dead as Jesus

said would happen before Jesus died.

If someone tells you that they are going to die and
then three days later come back to life and it
actually happens then this person must be the
real deal.

Jesus Christ is the only person that ever lived a
perfect sinless life.

This is why Jesus is able to cover our sins(misdeeds)
with His own blood because Jesus is sinless.

The Holy Bible says, "In Him(Jesus) we have
redemption through His blood, the forgiveness of
sins..." (Ephesians 1:7)

If you would like God to forgive you of your past,
present and future sins just ask Jesus Christ to be
your Lord and Saviour.

It doesn't matter how old you are or how many bad
things that you have done in your life including
lying and stealing all the way up to murder.

Just pray the prayer below with your mouth and mean
it from your heart and God will hear you and save you.

Dear Jesus Christ, I want to be saved so that I can
have a home in Heaven with You when I die. I agree
with You that I am a sinner. I believe that You love
me and want to save me. I believe that You bled and
died on the cross to pay the penalty for my sins and
that You rose from the dead. Please forgive my sins
and come into my heart and be my Lord and Saviour.
Thanks Lord Jesus Christ for forgiving me and saving
me through Your merciful grace. Amen.

Welcome to the family of God if you just allowed God
to save you.

Now you are a real Christian and you can know for
sure that you will live in Heaven forever when this
life comes to an end.

As a child of God we are to avoid sin(wrongdoing),
but if you do sin the Holy Bible says, "My dear
children, I write this to you so that you will not
sin. But if anybody does sin, we have one who speaks
to the Father in our defense Jesus Christ,
the Righteous One."

Those of you that have not yet decided to place your
trust in the Lord Jesus Christ may never get another

chance to do so because you do not know when you
will die.

Jesus said, "I am the way, the truth and the life:
no one can come to the Father(God)(in Heaven), but
by me." (John 14:6)

This means that if you die without trusting in Jesus
Christ as your Lord and Saviour you will die in your
sins and be forever separated from the love of God in
a place called Hell.

The Holy Bible descibes Hell as a place of eternal
torment, suffering, pain and agony for all those who
have rejected Jesus Christ.

The good news is that you can avoid Hell by allowing
Jesus Christ to save you today. Only then will you
have true peace in your life knowing that no matter
what happens you are on your way to Heaven.

Praise the Lord!
Servant of the Lord Jesus Christ

This is the most important question of your life.

The question is: Are you saved?

It is not a question of how good you are,
nor if you are a church member, but are you saved?

Are you sure you will go to Heaven when you die?

The reason some people don't know for sure if they
are going to Heaven when they die is because they
just don't know.

The good news is that you can know for sure that
you are going to Heaven.

The Holy Bible describes Heaven as a beautiful
place with no death, sorrow, sickness or pain.

God tells us in the Holy Bible how simple it is
to be saved so that we can live forever with Him
in Heaven.

"For if you confess with your mouth Jesus is Lord
and believe in your heart that God raised Him from
the dead, you WILL BE SAVED." (Romans 10:9)

Over 2000 years ago God came from Heaven to earth
in the person of Jesus Christ to shed His blood
and die on a cross to pay our sin debt in full.

Jesus Christ was born in Israel supernaturally to
a virgin Jewish woman named Mary and lived a sinless
life for thirty-three years.

At the age of thirty-three Jesus was scourged and
had a crown of thorns pressed onto His head then

Jesus was crucified.

Three days after Jesus died on a cross and was placed in a grave Jesus rose from the dead as Jesus said would happen before Jesus died.

If someone tells you that they are going to die and then three days later come back to life and it actually happens then this person must be the real deal.

Jesus Christ is the only person that ever lived a perfect sinless life.

This is why Jesus is able to cover our sins(misdeeds) with His own blood because Jesus is sinless.

The Holy Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you would like God to forgive you of your past, present and future sins just ask Jesus Christ to be your Lord and Saviour.

It doesn't matter how old you are or how many bad things that you have done in your life including lying and stealing all the way up to murder.

Just pray the prayer below with your mouth and mean it from your heart and God will hear you and save you.

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven with You when I die. I agree with You that I am a sinner. I believe that You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins and that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thanks Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

Welcome to the family of God if you just allowed God to save you.

Now you are a real Christian and you can know for sure that you will live in Heaven forever when this life comes to an end.

As a child of God we are to avoid sin(wrongdoing), but if you do sin the Holy Bible says, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ,

In article <ld-dnYo7c-6esenfRVn-og@comcast.com>, Brian Denley wrote:
> Trade an R8A for an SW8? What am I missing?

He is a HAM. He used the R8 before he was licensed and since then purchased
a transceiver which works as well as the R8A does for what he needs.

He operates CW and purchased a low power portable transmitter so he can operate
a portable station, probably from batteries. In his opinion an SW8 would make
a good receiver for his portable station.

Since he no longer uses the R8A, an even trade makes a lot of sense to him.
Both parties can communicate directrly so that there are no misunderstandings,
no EBAY fees, etc.

Geoff.

Huh, so Stair got caught up in fleshly sinful pleasure. Peters
preaches some kind of bigoted doctrine. I'm sitting around,
chain-smoking, spinning around the radio dial. You reckon yourself on
top of the situation, rightly dividing the Word of Truth. If you figure
Peters for a fountain of living water, you're way off. I like Stair,
right or wrong, mainly 'cause I can relate to the guy.

Quoting the entire post when you're replying to an automated spammer is a sin as well. But if you snip it in the future and nail three girls named Mary you'll be safe.

Or is that say three Hail Mary's? I get confused. For instance, maybe nailing one girl named Mary three times will get you off the hook as well. <shrug>

I'm interested in your spread sheet, Pete. Can you e-mail it to me?

The specs are as I described. The stock 2-pole filter is the TEW MF45R2 http://www.tew.co.jp/crystal/mcf/e_19.html and the 4-pole (dual cascaded 2-pole) with which I replaced it is the Fox 45F30B http://www.foxonline.com/pdfs/filters.pdf . Much to my surprise and disappointment, the improvement in image rejection looked to be at best 2 S-units (hard to tell with the coarse meter on the DX-394), not the 30-35 dB I was hoping for. Having searched again for the TEW specs, I found that they had been updated since I last searched and now specify the attenuation at 45MHz-910 kHz (44.09MHz) - it's a guaranteed minimum of an amazing 60 dB. The 2-pole Fox equivalent is only 40 dB and the matched pair is guaranteed to be 70 dB minimum. That's only 10 dB better than the stock filter or, coincidentally, about 2 S-units on an accurate scale. There was also some loss of sensitivity - not sure how much but no evidence of gross ripple (just using the S-meter).

I did the substitution with no change in the surrounding LRC's. The filter looks into a 100pF cap (Xc= 35ohms) in series with a 1k that is paralleled with the input impedance of the 1st IF amplifier. So we know the result is going to be under 1k. The source for the filter is a tunable transformer. If the 1st IF amp input impedance was around 1k, then the stock filter would see something close to its desired 560 ohms. Increasing the 1k resistor to 3k3 would raise the load impedance to near 800 ohms, the desired load for the Fox pair.

We have a second amendment that allows us to bear arms. Why did we get this amendment? Answer: to allow us to protect ourselves against the state - the same state that you choose to blindly follow. Personally I believe it is the true role of a patriot to pursue truth and liberty, because those are the principles this country was founded on. As a patriot I abhore and condemn those who lie and commit injustices in the name of this country. I will not blindly follow Mr. Bush over a cliff.

Pete, I looked up the Icom R75 schematic as you suggested and I see that they parallel 2 2SN2171 FET's, pin-to-pin, in the 1st RF stage. However, it's a grounded-gate JFET configuration while the DX-394's 3SK195 is a Dual insulated Gate MOSFET common source (unless I have the source and drain mixed up).

Do you think there would be any reason that it is not feasible to parallel them? There is a 100ohm resistor in series with the primary winding of the output transformer on the drain, and a 100 ohm resistor and transistor for AGC in series with the source. If I cut the 2 100ohm resistors down to 50 ohms, I should get about the same operating point as with one transistor, right?

BTW, the 3SK195 is described as being for TV Tuner, VHF RF Amplifier Applications, FM Tuner Applications and exhibits Superior cross modulation performance, Low reverse transfer capacitance: Crss = 0.015 pF (typ.), and Low noise figure: NF = 1.1dB (typ.)

The R75 uses MA77 silicon epitaxial planar band switching diodes on the outputs of the preselector. These are similar to the DX-394's HSU277's. However, on the input side, it uses 1SV265 silicon epitaxial PIN diodes - from the spec sheet, 2.5ohms @10mA, 0.26pF @13V. Now that's interesting - using the PIN diode on one side only.

Sounds like George Bush speaking. Can't somebody be for some things and
against some things? You have to be 100% for America? So if America lays a
huge turd, one will tell us it doesn't stink because it's an American turd?
America can never do wrong if you are patriotic?

There are plenty
> of things that you can do to show support for your country.

Yeah, you can put one of those made in China yellow ribbons on your made in
Japan car.

Oh no it isn't. I feel strongly about America too. We were the only ones
in our neighborhood to sit outside at twilight and light a candle during the
national recogniton for the 9/11 victims. And I was very much in favor of
finding te bastards that did it to us. But I was also against the Iraq war
when I saw it for a bogus reason to invade a country that had not attacked
us. Does that make me unpatriotic to be skeptical to my countrie's motives?

Hi Michael,

Try this link:

http://web.archive.org/web/20030201130614/wb4huc.home.texas.net/rx320/

The link to the software and the users manual is down the page at this site.
You can also find the programs alone at:

http://wb4huc.home.texas.net/rx320

Because this is a public forum and you put your "beliefs" (i.e. prejudices)
out for all to see in the first post in this thread. If you don't want to
people to "attack" you, you might consider keeping your posts on topic. This
is a shortwave radio forum. If you want to discuss politics there are many
more suitable places to do it.

Recently, I picked up an old tube-type AM/clock Philco radio. I only purchased it because it was in pristine shape, and they were practically giving it away. The clock-face doesn't light up, but it performs otherwise as new. In regards to any dire-straights type scenario, food, shelter, water, and such would be of priority. Any listening device might give useful clues as to the state of things in general. Darren

On 2005-04-15 Roger507@webtv.net said:
Newsgroups: rec.radio.shortwave
I would take my "piece of crap" Radio Shack Multi-Band Self Powered 12-803 anywhere in the world. It operates on just two (2) penlight batteries and receives most Standard AM shortwave radio broadcasts. Keep in mind that the "average" soldier would just listen to the news and music. With the wind-up capabilities to recharge internal batteries the 12-803 as well as the Grundig FR-200 would solve any problems with re-supply that might exist. It is unlikely that any enemy jamming would exist on any common SW frequencys for they would be quickly located by the USAF and eliminated. A soldiers radio has to be simple, tough, and be able to operate in tough situations. I stand by my earlier posts.
Roger
SW Michigan
Army MOS 31U40 (Retired)
I would have to wholeheartedly support those statements, Roger. That Radio Shack 12-803 Self-powered radio is definitely a tough little beast, actually ruggedized for camping and outdoor use. It is the absolute champ among "self-powered" radios in the area of running the longest time with the fewest turns of the power crank that charges its two little NiMH batteries, and that crank is the smoothest turning and quietest of all the dynamo cranks I've seen on several different dynamo-powered models.

Shortwave coverage is limited to six band slices that covers program broadcast frequencies between 49 meters and 16 meters, and the band that includes the weather radio frequencies in the US and Canada might not be of much use in Iraq or Afghanistan. The MW (AM broadcast) coverage and FM coverage are world standard, and the analog tuning means that the user won't need to know or care whether MW stations are spaced 9 KHz or 10KHz apart.

The only drawback to carrying that radio to a place like Iraq would be that, if it does get misplaced, stolen, or blown up, you might have a hard time getting a replacement, since it doesn't seem to be made anymore, by anybody, for any brand line, at least not for sale in North America.

That Grundig FR-200, (AKA Tecsun Green 88) has continuous shortwave coverage from about 2300 to 27,400 KHz, so it has better SW coverage than the 12-803, and it has the same MW and FM coverage. Being a little less chunky in form factor, it might be a little more convenient to pack in the standard army-issue rucksack or Allis pack. If it gets stolen, left somewhere, or shot to hell, it can be easily replaced later. Its biggest weakness as a frontline soldier's radio companion is that it is much less ruggedly constructed than the 12-803, and its dynamo crank is much noisier and you'll hear it through the speaker if you crank as you listen.

One radio that may still be available in this category is the Coleman Outrider, which was sold by Universal Radio, and I think also by Grove Enterprises. It is a little larger and heavier than the 12-803, has a similar form factor design, is ruggedly built, adds solar cell power capability which might be useful in an Iraqi desert. It only uses its built-in rechargeable battery and can be powered from an external wall wart power supply. It only knows the MW (AM broadcast) band, and the standard FM band, and it has no shortwave coverage. That radio is also sold in a slightly slimmer, lighter, and less rugged package as a FreePlay model.

If I were going to the front lines in Iraq or Afghanistan, I don't think I'd want to take along any of the small push-button interfaced, "digitally" tuned receivers with me, and I wouldn't want some of the really cheap analog-tuned models that have those tiny cheap switches and those flimsy sliding volume and tone controls. I also would not want them because they tend to be relative battery hogs. A high thirst for the capacity of six batteries would definitely rule out a radio like that Grundig YB-400PE for my purposes as a receiver for living out in the field on or near the front lines of military action.

I haven't owned a wind-up, or solar powered radio. I'm in no
position to have an opinion on them. If one exists, with "true"
digital tuning, it would probably be worth having. Darren

Well, Darren, there is at least one self-powered / crank-powered radio with digital tuning. That would be the FreePlay Summit, still being sold at Universal Radio, among other places. See it in Universal Radio's catalog pages under the links for "specialty radios".

For small and cheap, I still prefer the analog-tuned models, for extended run time on a set of batteries, or on a battery charge or on a given amount of time turning a crank, if for no other reason.

Actually, the 5 mv/m primary coverage includes all of LA County except the
High Desert (which only one LA station covers well) and most of the OC, all
the way down beyond Irvine. It operates with the highest power permissable,
50,000 watts, during daytime hours. It shares the KTNQ transmitter site, and
has 5/8 wavelenght towers, making for great efficiency.

And you believed them. Delightful.

> They're directional. I'm in Santa Clarita and their signal is wimpy.

Nearly all LA AMs are bad in the Santa Clarita Valley. The fact that nearly
all were originally designed in the 20's and 30's before anyone thought of
living out there is the reason why so few have any signal in that direction.

And so few people live there that the Arbitron diaries placed there are very few proportionally, so it does not really matter.

I know they are directional. In fact, they push the equivalent of nearly 250 kw over most of the LA market. As LA signals go, they are actually one of the best.

How is questioning the motives of the US, and those who put people in the
category of pro-US and anti-US being politically correct?

Once again, what is politically correct? In today's climate, being
politically correct means not questioning the US. As the president has
said, you are either with us or against us.

Overcomer Ministry date/freq/station "Apocalypse" card in 18 days for
English report and US$1.00. Also received computer-generated
"personal message" from Brother Stair.

I am also double-dipping, trying to get WWCR to cough up a QSL too,
since it came over their tx'ers. Wish me luck.

I have a plan in case I start receiving regular requests for
donations: Normally, they send you a first-class prepaid envelope to
send in your donation. What you do is wrap up a couple of Hollywood
blocks or a 70lb. piece of I-Beam, tape their prepaid first-class
postage envelope to the package, and take the whole thing down to the
post office and send it off. Now, mind you, you have to put your
return address on it, so they know who the hint is from..... LOL

I'm not familiar with New York (state) voting policies. Some states have registered Dems/Reps and some, like WI and MI, have open primaries.

If NYC has registered voters by parties, I'd wager that the Dems there far outnumber the Republicans. So what type of system does NY have?

Hey! The LA FMs suck here ,too. I get KCSN in Stereo, that's it.
Hence the affinity for SDARS.

I get KKOH Reno and several SF and 2 Las Vegas real well at night on
the mediumwave. KFI is a shadow of their former selves (but they
scream too much to leave on while asleep anyway).

KFI had a plane fly into its half-wave tower early this year. It is
currently running on a 1/8 wave tower at half power, and probably will be in
the immediate future.

Since you are out of the groundwave coverage of the LA stations, and not in
their skywave areas, it is normal that you not hear them at night. The
market is simply bigger than anyone at the FRC envisioned back in the 20's
when powers were capped at 50 kw. Almost all the FMs in LA are blocked by
terrain in getting to that area. A few have put boosters in the area, but,
again, it is such a small percentage of the LA metro population that most
don't make the effort.

..that was the controversial bit from Air America earlier
last week during the Randi Rhoades show which went
way over the line of professional broadcasting.

story here: http://www.nypost.com/entertainment/23522.htm

As JPL said of the event, whoever let this "bit"
get by their control boards at A.A. should have
been fired. (probably have by now)

Fascists are simply people with advantages who work together to
oppress those without those advantages. It is especially onerous when
captains of industry get chummy with politicians. Like now for
instance.

You'd have to be post-lobotomy not to be able to see it.

I like not being bathed in so much RF.

I can get every FM in Southern California on my Tivoli Model One, just
not all at the same time. San Diego comes in better than Mount
Wilson. No TV whatsoever. Pure bliss.

133. American Christians

Newsgroup: rec.radio.shortwave
Date: 2005-05-02 02:03:23 UTC
From: "&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com>
Message-ID: <Xns9649E05DAFBA0TheDoctorisin@216.168.3.44>
Source record: 20818

My apologies to the Jewish readers of this group, but this is a shortwave related topic.

7490 Khz AM, 0000 UTC
I believe this is their web page: http://www.thebereancall.org/

A quote from the radio show:
"Hopefully in the next few months, we will have judgment day", sounding fully like Ned Flanders, one expecting a full chorus of Kum ba yah to rise in the background.
http://www.markdroberts.com/images/Ned-Lovejoy-t.jpg

Disgustingly bubbly Born Again Christians climaxing in orgasms over the topic of Israel, whilst quoting from the Bible. It never ceases to amaze me that they become fixated on specific passages from the Bible, holding the passage literally as Gospel, yet the choose to ignore any passage that they themselves may be violating. I am sure that God approves of Tele-Evangelists, taking in millions of dollars, spending it on lavish life styles, hair styling, cars, buildings, etc. Yet American Christians still buy into it. The shortwave religious show hosts, I am sure, would do the same if the opportunity arose.

The show is recounting the trauma of Israelis leaving the occupied/contested areas, since they have lived there for 30 years. The show continues with the Biblical assertion of Israel belonging to the Jews. (I yield this point, but how much actually comprises Israel?) Continuing, the show is mentioning terrorists, says that the Israelis would expose themselves, by vacating some of the contested territories, to increased terrorist attacks, that they would need to leave behind, in the cemeteries, those loved ones killed by terrorists, and used the word terrorist ad infinitum in every sentence that they said over the next couple of minutes. Sheesh, the world doesn't have a chance as long as American Christians have such sway in American politics.

If the Middle East conflict is ever to be resolved, there is going to need to be some loss of the land that the Israelis have taken in the 6 Day War. But with American Christians willing to send their Children and the Children of others to the Middle East to be sacrificed in chasing the chimerical WMD, a resolution to these conflicts cannot be expected soon, if at all.

Now they have digressed into an exegesis of Catholicism. Of course, the ritual that Catholics utilize as part of Mass is evil, yet the ritual that Jews utilize as part of their devotion to God is good. Ahem, I see. Was the brain an optional item when God made American Christians?

Catholic Church or Synagogue:
http://www.jewishvirtuallibrary.org/jsource/images/England/westend1.jpg

Catholic Church or Synagogue:
http://www.ivan-herman.net/Photos/Budapest/DSC00226_14082001.JPG

Catholic Church or Synagogue:
http://www.jewishgen.org/Litvak/images/kovnosyn.jpg

Of course, they are all Synagogues, very beautiful. Most that I saw were quite modest, as are most Catholic Churches, particularly the newer ones.

I cannot see how any sentient being can possibly listen to most of the American Christian shortwave broadcasts. Believe me when I say that hundreds of years from now, under the guidance of the United Solar System Agency, that America or the North American continent will need to pay reparations for the rogue shortwave signals that damaged the psyches of innocent children 100 or so light years from here.

Pursuant to the topic of Space and Shortwave, on a show last night, seriously, the host said to look up the following site:

http://www.negrospaceprogram.com/ Watch the movie, it's a satire.

Dr. Artaud

I first heard Randi Rhodes when I was in Boca Raton last summer during the Hurricane season. She was complaining about Jeb Bush prepositioning emergency crews and supplies when "all knew" the Hurricane was going straight North off the West coast.

It wasn't 24 hours later that Charlie started its rampage diagonally across FL from the SW to the NE. Tremendous damage was done an some lives were lost. Driving out of FL right after the storm the roads were filled with responding emergency crews who had been prepositioned and alerted PRIOR to the storm. Jeb's logical response helped to diminish the impact of this storm.

Just this weekend I had the opportunity to listen to Air Amerika, and Randi Rhodes was hosting her program it was fascinating; there is no there, there! I want all Americans to listen to this program it isn't funny, it isn't factual, they can't use real data all their supporting information is based on name calling and asserted conclusions. It is so very bad I find it fascinating. The guests all sounded like retarded "California Girls": Like! Ya Know! Duh! were some of the higher level words used in their discussion. their understanding of economics and the worlds oil market was vacuous absolutely stunning it was so empty of knowledge.

Don't let Air Amerika shut down people need to know what the Democra'ats are like

He is on an island in the South Pacific. "CNMI" means Confederation of
Northern Marianas Islands. He gets a lot of stuff that I can't get in
California, although to be fair much of what he gets is broadcast in the
wee hours CA time. Reception of Asians is generally better on the west
coast of US/Canada and of course on Pacific Islands. As a consolation
prize, you guys have better reception of Africa and the Mideast.

Various things I've read over the years. Bush's alcoholism is well documented, his cocaine use less so. His rectangular "shoulder blade" in the upper middle of his back during the first debate has yet to be explained. It is POSSIBLE that it is the power pack for a wearable defibulator called a LifeVest.

The original Freeplays were pretty tough, although their sensitivity was limited-with all those gears they simply didn't have enough room for the electronics. I have a Freeplay S360, AM/FM only, and it has a clear case and one can see that most of the space is taken up by the spring assembly (the Bayliss Generator) which charges a tiny battery which powers a small circuit board with a four transistor AM circuit and a cheap FM IC. The Bayliss generator design was truly revolutionary in its time and it's a shame that it couldn't have been improved upon, hooked to some real electronics, and made to fulfill the inventor's goal of giving poor people battery free radios. Batteries are so expensive in the rest of the world that Chinese domestic SW radios come with rechargeable batteries that can be charged in the radio. The batteries are of low quality, but it's one solution. Reviving the Bayliss Generator would be another. Somewhere, somehow, somebody will make it practical. But until that time, you're stuck with the FR200, which is made by Tecsun and called (I think) the Green 88 in China. You might have saved some money by buying the Tecsun version from Liypn.

You might want to find out if there a OIRT nation or not because OIRT is waaay diffferent than EBU and ITU fm and am. Shortwave is all we really have in common. (Stolen and absconded with from the net): Not all countries in the world use the same frequency band for FM broadcasts. In the former Soviet Union and eastern European countries, the band from 65 to 73 MHz is also used. These transmitters are extremely useful for West European observers. Note that only the former Soviet Union countries will keep using this band. From the year 2000 on, all other East European countries will probably have stopped transmissions in the 65-73 MHz band. Japan also uses another frequency band (76-90 MHz), which can be useful for observers in the neighborhood.

oh it gets better now the am is different too....AS I recall its 260kHz to 1467 kHz so i know many nations are changeing to EBU and ITU frequencies but important to remeber if our armys there the last thing the locals care about is radio frequency modernization. So a radio to be used by a soldier or squaddie has to have OIRT and EBU and ITU considerations. whats to come of the freshly abandonded OIRT frecquency bands? pirate radio or what? or when everyone moves to EBU and ITU standards then they can use them for the same things those bands are used for in EBU and ITU countries? interesting things to thinki of hope this helps in the serch for the perfect radio:)

I must object in the strongest possible manner to your post. Please refrain from
using the word 'taste' in the same sentence as 'Cuhulin'. They, coupled, are
the best example of a mutually exclusive set of words.

You're going to get the Radio Shack brand right back again.

Radio Shack (U.S) will start opening its own stores in Canada under its own
name imedialtey, now that they have back rights to the name.

There was a news story tot hat effect in the alst day or two.....

How have you measured the noise from the AR7030's soap on a rope supply?

The power dissipation in a linear regular is something that you engineer the product to handle. Running hot isn't good, but hot to the touch isn't nearly as bad as you think. It gets impractical to keep adding heat sink after heat sink to a product, or worse yet a fan that untimately will fail.

Fine, as long as you don't use the word "coupled" in a post about cuhulin,
in a thread about Blueberry.

Hi Frank,

I managed to hear Mongolia quite a number of times when I lived in Montreal
(late 1995-early 1999) with a random wire antena hooked up to my boatanchors.
The winter months were better for reception.

Good DX

Tebojockey,

Can you hear Mongolia on 7260 kHz around 0800 or so?

Let me know how you like Mongolia if you do decide to go. My top 3 vacation picks right now would be Myanmar, Mongolia and Nepal/Tibet (that is if things ever cool down in Nepal!). I've been to Laos and Cambodia and really enjoyed Laos.

Good DX

PBS had a documentary on the life of Emailia Earhart. It showed the airplane she used. The airplane had a small loop antenna above the head of the airplane. And I believe a saw a 2-3 vertical antenna behind the loop antenna.

Does anyone have any information on the types of radios she was using? Or the radio bands she was transmitting on?

PBS mention that she left behind a 500 khz wire antenna. Somehow she did make radio contact with a US ship in the Pacific before disappearing.

I expect the loop was for RDF'ing, most likely LW beacons or AMBC stations.

You have managed to miss the whole point of democracy. The government is your SERVANT, not master. You owe the government NOTHING. The people that work for YOU are the ones who owe YOU for the privilege of serving.

Until you and your drone buddies get that through your apparently brainwashed heads, your servants will keep taking away your money and liberty. Given any opportunity, these 'servants' turn into self serving scum. They seem to have your complete support. Shameful.

I just purchased a Grundig FR200G radio, but it came this a regular type filament bulb. I have seen the Eton Corp. site advertising a FR200 model radio equipped with a LED lightbulb. Has anyone got the model with the LED lightbulb?

I'm just wondering if the LED bulb is interchangeable with the filament bulb. I didn't see the LED bulb available on the Eton Corp. FR200 parts list.

"Politically correct" is a false concept that forces people to ignore bad things, ideas and people so you don't offend anyone. It is the dumbest idea I've ever heard, short of letting everyone on the Internet. If someone offends me, I tell them. If someone comes up with a stupid idea, I'll tell them that its stupid, and why. If someone is a royal pain in the ass, I'll tell them I don't want anything to do with them. To sum it all up, being "Politically correct" means you're afraid to open your mouth to anyone, about anything. I'm too damn old and too tired for that liberal garbage. I am not a sheep, I'm the one chasing the sheep with the shears.

Thanks for the reply!

The wb4hu link in dead. But archive.org link works. I'll have to give it
a try.

Cheers,
Mike

The null modem cable works, I'm using a Palm Vxe and Rory Davis'
software. It's just that it lacks memories.

Randi Rhodes and Air America have officially apologized for this incident
and the offending parties who broadcast this item have
had their employment suspended. The offending program spot was
originated out of their network studio and Rhodes had no prior
knowledge this was going to be broadcast. It appears the bit
in question was played by a studio techincian manning the program
control board. This person has been suspended pending an investigation.

Yes. While it isn't as bright as a incandescent, it will run
much longer on a single cranking charge. Are you sure it
is a filament bulb and not a LED?

My FR200G has a set of 2/3AA NiMH that are charged
by the hand crank. It will also take 3?AA cells. and accept
+4.5V into an external power port.

The little LED is clear and looks like a "grain of wheat" tiny
bulb. I will check tonight and post if there is any clear give
away that it is an LED.

If yours is a filament bulb, you can't just replace it with an LED.
At the least it will need a seris resistor. Too bad the FR200 doesn't
come with a diagram.

Switching power supplies, AKA switch mode power supplies, suck.
The active switch device is certain to fail at some point. I have
lenear
supplies that are 30+ years old, and except for replacing the filter
caps
caps at 15~20 year intervals will work until lightning gets them.

I had to attend a school on repairing switchmodes and the Sony techs
warned us that they are very sensitive to even minor changes in device
parameters. Gain,leakage everthing changes wth age and that is not
good.
As to repair, the replacement active devices must match exactly. Their
advice was repair was difficult and the repaired supply would never
be as trustworthy as a new one. They also showed us how the switching
transitor junction acts radiates ultrasonics that will eventually cause
the
junction to fail. They had a nifty ultrasonic transducer that
downconverted "audio" up to several MHz to down to 50~10,000Hz audio. I
owned a JBL professional audio amp with a switchmode that would eat
swithcing power transistors every couple of months. I got a friend to
mill the head off the
transisotr case and the junction was shattered like glass. We
sacrifcied a new transistor and the junction looked like those in a
text book.

Management insisted that we repair the switchmode supplies and sure
enough, no matter what parts we changed, they all failed in less then a

year. Part of the problem was we had no way to pick truely matched
parts.
Thjose little dabs of color on the parts show oddites like turn on/turn
off time etc. Diode turn on had to match transistor turn on etc.
A big goat rope and lots of fun.

Switchmodes are dirty as hell, and any attempt to round those nice
harmonic generating square waves only made them run hotter and fail
sooner. Some of the low noise equipemnt has the switchers in double
shielded cases with fancy feed throughs for power.
And they are still dirtier then a good linear supply.

Terry

So was the Stern bit. But for some reason he is being held
accountable for something a caller said, while the argument here is
that Rhodes had nothing to do with it.

The bit was produced in one of the network studios, opposed to being
called in arbitrarily by a caller. Now, all things being equal, who
would you say was more culpable?

Thanks for that Terry.
I was recently in the market for a new power supply and straight off thought of one of the lightweight portable switchmode power supplies.
Thank goodness my good friend Guy Atkins warned me off them, as you do now, so I bought instead a high quality linear (old fashioned) power supply that is doing sterling service here in this QTH right now.

Powered up with this I got a nice catch yesterday morning at sunrise (0500) - WTOP, Washington DC, 1500
Khz, 8,000 miles from here.
Have not logged a U.S. station on 1500 Khz before (from any location), so was quite thrilled with this new catch. The U.S. stations come in so rarely here over the mountains that it is quite an occasion. Had the opportunity to fiddle with the Icom 756 a bit, and found that I probably would not have been
able to ID and record this weak catch without the 756's outstanding NR facility.

187. US House Resolution Calls on FCC to Evaluate BPL Interference, Review Rules

Newsgroup: rec.radio.shortwave
Date: 2005-05-02 18:14:50 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3dn90iF6u0fcqU1@individual.net>
Source record: 20771

April 28, 2005

Rep Michael Ross, WD5DVR, of Arkansas, has introduced a resolution in the US House of Representatives calling on the FCC to "conduct a full and complete analysis" of radio interference from broadband over power line (BPL). The resolution, H. Res 230, says the Commission should comprehensively evaluate BPL's interference potential incorporating "extensive public review and comment," and--in light of that analysis--to "reconsider and review" its new BPL rules. If approved by the full House, the non-binding resolution, introduced April 21, would express the requests as "the sense of the House of Representatives." The FCC adopted rules to govern so-called Access BPL last October 14 in ET Docket 04-37.

Oh.. of those two, the Yaesu is by far the better radio... harder to tune,
but has SSB/CW capablility, and there's a firmware (button) mod for
narrowband AM.

190. A perfect description of the retard Porky Davies.....

The mentally unstable, ghastly pale, genetically defective porker, who thinks he controls an army of trash can robots, and fancies he is the king of knob jobs in Athens, Alabama. (The home of Deliverance extras.)

There are no Daleks under your command 'tard boy. They are fictional robots used in a television show! You need to get mental help again failure boy.

You have been a failure in everything you have ever done, PERIOD!

You are indeed "pale" you never venture forth outside except for your minimum wage "job," and to buy more of that pussy Bud Lite beer. A real man's beer like Guinness or Newcastle Ale would probably kill a big fat pussy like yourself.

You need to seriously take a long hard look at yourself in a properly lit mirror in that roach infested hovel you call home and then take action. Call Orkin and get that filthy place fumigated, lose weight, get mental help, stay off the computer for hours on end and face reality.

You are 31 years of age, you deliver pizzas, you play with dolls, you get drunk and spew your filth and delusions on here and usenet, while you jack off and get drunk. Nobody, I repeat, nobody except for a couple of geeks like yourself can stand you.

The best thing you could do is to slit your wrists while in that shitty vehicle of yours this summer, then if the police didn't find you right away, the Alabama summer heat would do it without you having to be cremated. You are a blathering asshole that is a boil in the crack of America's ass. You irritate us, end it now Porky, do it! Summer is almost upon you, use Mother Nature to help.

You need to either kill yourself or get help, that's it, do it!

And, to the idiots who think they are helping Lloyd, forget it, he is beyond help, except for the lobotomy kind.

Most have never seen this misfit of nature up close. I have and it makes me sick to my stomach.

Hi,

You're going to hear good and bad things about it - it depends on people's personal tastes. I have one as well as a DX-398 and a Sat-800 and I really like it a lot. It is a battery eater but it does come with and AC adaptor. I use rechargable batteries in mine and recomend getting a set if you're going to use it with batteries.

Have Fun!

My preference is for linear supplies, but today's switchers are not all that bad. I'm baffled about your comment on the ultrasonics causing the transistor junction to fail. Most power devices fail due to hot spot (really the weak points in a reverse bias breakdown) or electromigration. Modern switchers use power fets, so there is no junction in the bipolar sense, unless you count the fast recovery diodes.

The real problem with switchers was the poor level of protection circuitry. [I'm lumping start up and short circuit protection together, though start up can really be a problem.] It takes a great deal of overhead to make a rugged switcher. Discrete designs couldn't add all that "just in case" hardware than is common in good switcher controller IC made today.

For my own use, I still build/buy linear supplies. I don't care if they are big and heavy. But think how big a 400 watt supply would be in a PC!

One problem with switchers is the noise they generate on the line itself. You need to filter both the output and the input on a switcher. For radio use, the line noise can radiate and cause QRM.

195. NASWA - North American Shortwave Association

Newsgroup: rec.radio.shortwave
Date: 2005-05-02 21:04:22 UTC
From: jamulc <jamulcare@gmail.com>
Message-ID: <1115067862.553018.180020@l41g2000cwc.googlegroups.com>
Source record: 20780

Hello Folks,

I would like to ask, is anyone here a member of NASWA (North American Shortwave Association)? If so, could you please let us non-members know a little something about the association? Apart from the annual SWL Fest held in Pennsylvania, what other activities or efforts does NASWA sponsor or otherwise involve itself with? How is the monthly publication, the NASWA Journal, and what types of features are being presented in the Journal these days? Any ideas as to what membership trends are like within the organization (e.g., is membership robust and growing? or is NASWA steadily losing members due to the explosive growth of web-based "virtual" SWL clubs?)?

I am asking these questions because some years back, I had sent off for and received a sample copy of the NASWA Journal. It was a nice, 56-page publication, filled with interesting and useful information for the shortwave broadcast listener. Having recently begun active shortwave listening once more, I visited the NASWA website a few days back to see what was new with NASWA and with the intention of possibly taking up membership in the group. The NASWA website was a bit of a disappointment, however. While, admittedly, there have been some changes and updates, overall the website seems not to have changed much since when I last visited in 2001. Since the NASWA website is likely the organization's most visible interface with the wider world of (non-member) SWL enthusiasts, they would do well to provide more periodic updates to the site, perhaps providing various SWL listening tips, schedule updates (the excellent SWL Guide on the NASWA site, sadly, has not been updated since January 2004, it seems), DX news, recent SWL logs, etc (the sort of stuff that keeps so many of us returning repeatedly to such sites as radiointel.com and hard-core-dx.com).

Clearly, there are a lot of dedicated SWL enthusiasts within NASWA who have contributed much to the hobby of shortwave listening. So, if anyone here is a member of NASWA, could you please let us know a bit about the club, what it offers that the web-based SWL communities are not able to provide, and, simply put, why us non-members should want to join up?

Thanks!

jamulc

news:117b7lb51bmq278@corp.supernews.com:

Just what do you consider as suitable for posting on this NG, "I just bought a Sony 7600GR", is that it?

Oh My God, it would get quite boring. There is shortwave show content and shortwave technical issues, both comprise topics suitable for posting.

On the topic of Cuhulin, half the posts on this NG were by people trying to instigate responses from him, then expressing incredulity at his replies.

Just curious, from a search of your name "mydigcam", there are zero posts under that name, or having that name, when searching Google Groups. Odd, were you just born, or are you are regular concealing their name under a pseudonym, or what? You just happened to stroll into this NG, fully aware of Cuhulin, and yet had no other posts. Obviously this is not the case.

Perhaps you have a simplistic view of life, preferring that all people are just like you. Notice that in my original post, no matter how offended that I was by the particular Christian Show, I would never suggest that anyone prohibits them from broadcasting it. I have the power to turn the show off, I listened yesterday just to confirm the topics prior to writing.

Regards,

Dr. Artaud

I've been a member of NASWA since 1981, with a few lapses due to college, moving, etc. The NASWA Journal (formerly FRENDX) is even of a higher quality today. The page count is still around 60 pgs/month, more in the winter due to more DX, perhaps a bit less in the summer due to noisy conditions. There are always very high quality articles of a technical and/or historical SW nature.

I'm not sure what the membership is, but it is probably down from the peak since the number of SWL's has decreased over the years. Don't let the web site fool you, though -- NASWA is very much alive and kicking. The web site is a volunteer effort of one very generous DXer, so that may explain why it hasn't been updated lately.

In addition to the monthly Journal, NASWA members can subscribe to the free email "flashsheet" which comes out weekly. This is the most up-to-date bulletin with DX tips only days or sometimes hours old.

NASWA through the Journal provides in-depth information that you are unlikely to find on the 'net without some searching, and even then you may never find it. This is supplemented by the flashsheet described earlier.

As a member you can also apply for NASWA award certificates suitable for framing based on your DXing achievements (# countries verified in Africa, etc.) for a very small fee, typically only a few bucks.

U.S. membership is only $26/yr as I recall.

For a list of other SWL-related links, check out http://www.bluegrassdavinci.com/ Links section. I try to keep it updated.

This is the most important question of your life.

The question is: Are you saved?

It is not a question of how good you are,
nor if you are a church member, but are you saved?

Are you sure you will go to Heaven when you die?

The reason some people don't know for sure if they
are going to Heaven when they die is because they
just don't know.

The good news is that you can know for sure that
you are going to Heaven.

The Holy Bible describes Heaven as a beautiful
place with no death, sorrow, sickness or pain.

God tells us in the Holy Bible how simple it is
to be saved so that we can live forever with Him
in Heaven.

"For if you confess with your mouth Jesus is Lord
and believe in your heart that God raised Him from
the dead, you WILL BE SAVED." (Romans 10:9)

Over 2000 years ago God came from Heaven to earth
in the person of Jesus Christ to shed His blood
and die on a cross to pay our sin debt in full.

Jesus Christ was born in Israel supernaturally to
a virgin Jewish woman named Mary and lived a sinless
life for thirty-three years.

At the age of thirty-three Jesus was scourged and
had a crown of thorns pressed onto His head then
Jesus was crucified.

Three days after Jesus died on a cross and was
placed in a grave Jesus rose from the dead as Jesus

said would happen before Jesus died.

If someone tells you that they are going to die and
then three days later come back to life and it
actually happens then this person must be the
real deal.

Jesus Christ is the only person that ever lived a
perfect sinless life.

This is why Jesus is able to cover our sins(misdeeds)
with His own blood because Jesus is sinless.

The Holy Bible says, "In Him(Jesus) we have
redemption through His blood, the forgiveness of
sins..." (Ephesians 1:7)

If you would like God to forgive you of your past,
present and future sins just ask Jesus Christ to be
your Lord and Saviour.

It doesn't matter how old you are or how many bad
things that you have done in your life including
lying and stealing all the way up to murder.

Just pray the prayer below with your mouth and mean
it from your heart and God will hear you and save you.

Dear Jesus Christ, I want to be saved so that I can
have a home in Heaven with You when I die. I agree
with You that I am a sinner. I believe that You love
me and want to save me. I believe that You bled and
died on the cross to pay the penalty for my sins and
that You rose from the dead. Please forgive my sins
and come into my heart and be my Lord and Saviour.
Thanks Lord Jesus Christ for forgiving me and saving
me through Your merciful grace. Amen.

Welcome to the family of God if you just allowed God
to save you.

Now you are a real Christian and you can know for
sure that you will live in Heaven forever when this
life comes to an end.

As a child of God we are to avoid sin(wrongdoing),
but if you do sin the Holy Bible says, "My dear
children, I write this to you so that you will not
sin. But if anybody does sin, we have one who speaks
to the Father in our defense Jesus Christ,
the Righteous One."

Those of you that have not yet decided to place your
trust in the Lord Jesus Christ may never get another

chance to do so because you do not know when you
will die.

Jesus said, "I am the way, the truth and the life:
no one can come to the Father(God)(in Heaven), but
by me." (John 14:6)

This means that if you die without trusting in Jesus
Christ as your Lord and Saviour you will die in your
sins and be forever separated from the love of God in
a place called Hell.

The Holy Bible descibes Hell as a place of eternal
torment, suffering, pain and agony for all those who
have rejected Jesus Christ.

The good news is that you can avoid Hell by allowing
Jesus Christ to save you today. Only then will you
have true peace in your life knowing that no matter
what happens you are on your way to Heaven.

Praise the Lord!
Servant of the Lord Jesus Christ

Can you bring something meaningful to the table other than some stupid unsubstantiated blog from nearly 10 months ago? I'm accustomed to radiclibs presenting thousands of ridiculous, fictional claims as fact during my 27 years of residing in the People's Republic of Madison.

Jim,

No argument.. my mind's not what it used to be, and I've had lots of Yaesu
hand held toys.. I'm remembering the FT-50 transceiver, on which a direct
entry keypad was an option... Thanks for clearing that up.. just means it's
a FAR superior radio to the IC-2. :)

I'm hoping someone can shed some light on why my AM radio doesn't come in as clearly as my stock car radio. I am a KGO talk radio fan and live in the bay area. I also have a home in the gold country that I visit almost every weekend. I noticed that KGO didn't come in at all on my regular, small radio so I invested in a CC Radio Plus with a ferrite antenna. Much to my dismay it comes in very distorted, although KNBR comes in very clearly.

What I don't understand is why my stock car radio tunes in KGO perfectly. I'm wondering if it's because my CC Radio is inside and my car is outside? Also, does anyone have any suggestions as to how I can get better reception?

Any help would be greatly appreciated!

The am mw antenna on that radio is a ferrite bar antenna on the inside
of the rear of that receiver. Try turning the radio until the reception
is best. usually broadside to the antenna.

They're more likely to use SW than Worldspace.. for one, Worldspace is a
subscription service, and there really isn't much they would want to listen
to on the feeds they would be getting for their $12 a month or whatever..
besides, AFN already has stations in those areas, and if they're anything at
all like the AFN FM service here in Korea, HipHop and Heavy Metal is about
all they DO play..

KGO uses a directional antenna. AM directional anntennas work by generating interfering or re-inforcing waves in various directions.

KGO's system favors the north-south directions and disfavors east-west transmission.

Your gold country home is in a "null" direction from the KGO transmitter (at the eastern end of the Dumbarton bridge).

In such areas, the phase interference produced by the transmitting antenna causes distortion in receivers.

KNBR has a non-directional antenna which is not subject to these effects.

The only way to improve your reception of KGO is to move.

As for your auto reception, the phase interference is a factor of postion. If you drive around while listening to KGO you will find the area of distortion is in a line between you and the KGO transmitter.

BTW, how is your reception of KCBS? Its situation is similar to KGO's

"Brenda Ann" <brendad@shinbiro.com> wrote in news:d56i3fqo1
@news1.kornet.net:

What country do you live in anyway?

The last time I looked, judges in some areas were sending law enforcement
to affected high schools to ensure that the graduates didn't say the word
"God" or "Jesus" during commencement ceremonies. Is this your idea of
"Free Speech"?

A group of Christians were denied their Right to Free Speech when they
showed up peacefully at a Pro-Homosexual rally in Philadelphia. The
Christians were essentially charged with Terrorism. Is this your idea of
Free Speech?

http://www.cnsnews.com/ViewCommentary.asp?Page=%5CCommentary%5Carchive%
5C200503%5CCOM20050303a.html

http://www.issues-views.com/comment.php/article/21098

(and so on and so forth)

Sorry Brenda, the only place in this country that has Free Speech is in
your mind, and you can't possibly be that na&#65533;ve. Unfortunately, we have
come to associate Free Speech with depraved expression. Public funds
cannot be used to display a Cross on Public Property, but the same Cross,
placed in a beaker of urine, is somehow an "Artistic Expression",
protected under the First Amendment and entitled to public funding.
Perverse, isn't it. IT'S THE SAME CROSS, only the piss separates it from
a Religious item or an Artistic item.

Regards,

Dr. Artaud

Soldiers want news from outside the AFN network, as I understand it. The major SW services (BBC, DW, RN) may be a bit liberal for the average US GI's taste, but they cover stuff that AFN doesn't. Besides, depending on what the comms officer decides to rebroadcast, the soldiers in Baghdad may get a fairly heavy dose of hip hop and heavy metal with little news. Some of the AFN streams are more news oriented than others. AFN over SW seems to range from all music to all news. Also, for any soldier interested in local culture, Mideast SW provides a number of English language opportunities to hear everything from cultural discussions to calls for jihad, not to mention the Saudi prayer and Quran reading services.

And??? Is someone supposed to glean over the entire blog? Why can't you present something current and meaningful so as to bolster your claim that AA is so popular in NYC or elsewhere? After all, you brought up the claim...

Who knows? Maybe AA is as popular as you seem to believe. But I haven't seen anything yet to make me think that it is.

I noticed that of their 55 stations three of them are in Hawaii. Are the radiclibs so fearful that they may lose all those electoral votes that they need three outlets there? And that one Alaskan AA outlet surely must cover that tiny state!

And two stations in Boston? Are their signal contours so weak that they need two stations to blanket that immense metropolis? Or are they perhaps weak stations in the exoburbs?

The AA outlet in my Detroit was the former third-place (at best) full-time sports talker. Not much of a gamble for them to switch formats. There are already too many religion stations here.

Actually, they're nowhere near #1 and are solidly #3 in the talk wars.
Air America, after a year, is seeing the audience shrink, not grow,
despite all the publicity it got.

What most people call "politically correct" nowadays was called "respect" or
"manners" when I grew up..

Thanks for such a clear response! KCBS comes in strong and is very
clear as well. That's really strange since KGO is practically
non-existent. I was going through talk radio withdrawal. The only
really clear talk radio was out of Utah or KSFO. Neither were stations
I like to listen to. Maybe I should think about listening via the
internet.

I totally agree that freedom of speech has been largely userped. My point is, it's NOT SUPPOSED TO BE THAT WAY. I disagree with a lot of what various people say in these NG's, and think that both sides of the political fence are currently in need of the men in the little white coats... BUT.. I am a Constitutionalist, and firmly believe in each person's right to their

opinion, and the right to publicly speak and avow said opinion. This includes subjects that are not en vogue or "politically correct", and even those that offend the average person. We have no right to never be offended.

Church has it's place in our society, but that place should be in our private lives, and not in the way the country is run (State). As for not allowing the display of Christian (or any other) icons in public places.. that's balderdash. I see no problem at all with displaying the Ten Commandments in the courts of the land when our law is based upon those Commandments. On the other hand, I see no problem with other displays at museums, art galleries, etc., as long as they are within the law. The atheists should leave the Christians alone, the Christians should leave the non-Christians (of every ilk) alone, and just go on about their lives.

Free speech is no longer speech when it begins to spill over into mandates that attempt to govern other people's lives. It's then action.. and no one has a right to act to curtail another's freedoms that are within the law. Constitutionally, we have no right to curtail by law the rights of any person just because we don't like what they are doing/saying or they don't agree with our particular philosophy.

As for the instances you cited, both are unmitigated bullcookies. If the Christian group were there to incite or commit violent acts, there would then be a case for assault or attempted assault or perhaps mayhem. I think the word "terrorism" is being widely overused. In the context that many use it now, it could be applied to a horror movie. As for the cross, people have the right to display religious artifacts any way they please on their own property. As to the 'art' in question, I find it extremely distasteful, and find it in no way to be art, but it is that person's right as well to display their 'art', even if it offends (which it does offend me).

>
So it is Deutsche Welle transmitting from Bonaire. The splatter is
unintelligible but synchronised with modulation peaks, especially strong
with deep male voices. There is no carrier that I can detect at the splatter
frequencies and SSB reception mode does not derive anything intelligible.
The splatter spectrum seems fairly wide although the presence of adjacent
stations renders these observations difficult. I can't think of any receiver
overload or intermod process that would result in symmetrical splatter but I
am using two identical radios to listen to the 9735 program and one of the
splatter sidebands so there could be a common receiver problem. There is
less interference to the splatter on 9845.

Hi John,

I'll give 7260 at 0800 a shot. I presume that's 0800 GMT? That's
1800 local here. Just about suppertime.

7260 is a mess right now. Radio Vanuatu is on with 10kW, but they get
squashed all the time by mainland China popping up on the freq.

I did a lot of work in Cambodia back in the late 90's in the paging
industry...and I have to say I had a great time. It was definitely
the wild west and a single man's paradise back then, but I assume
things have settled down on the latter at this point in time.

The cards Mongolia sent me were nice. There's one of these huge mountains which look quite picturesque. If I do decide to hear out there, I'll definitely let you know.

73 and regards,

Al in CNMI

Miracles happen. I'm not a tard all the time, just when I disagree with your political views. :P David, however, is a tard ALL the time. I don't think I've ever seen more than a handful (ie that can be counted on one hand) of posts even tangentially SW related from him. The vast majority of his stuff is far left political junk, most of it taken from internet sites. The rest is comments like the one above. I really think he's a washed up hippie teaching some useless class at Stanford, the type of guy who looks down his nose at the rest of us great unwashed. He's used to hapless students barfing up $35,000 a year in order to hear him and his comrades ramble for hours and regurgitate in perfect detail everything he says on essays or get an F. He's a Little Stalin with his own little hundred square foot USSR where he can lord it over 18 year olds. He comes here and gets bewildered by people actually calling him on his arrogance. So all he does is post the same crap over and over again, for Communist minds have one track only. He's not a student, because what 18 year old would know the lyrics to "Help I'm A Rock" by The Mothers Of Invention, know who Frank Zappa or Barry Goldwater were, or the rest of the 60s arcana that he spews?

I understand the concept of respect, but a lot of garbage gets the "PC" label, rather than face the truth. Right after 9/11 some idiot newscaster was talking about "Not saying anything to offend the terrorists". I wanted to puke. On the other hand, respect is a two way street, and respect is earned, not mandated. I had the owner's son of a company I worked for get in my face and yell that he "Demanded my respect!". He had stolen new hand tools out of my toolbox, and in general he couldn't be trusted. I told him that you don't demand respect, that you have to earn it every day.

I was there today, "The Source" seems to be clearing everything off its shelf that has the Radio Shack or Realistic name on it still, which includes a lot of parts (which have probably sat there for years). No word on if any replacements will be obtained. Even a lot of the Audio cables were cleared off the shelf, half the useless devices, and the Radio Shack batteries were 1/2 price. The salesman was like, "Nope, not getting rid of our shortwave radios because none of them say Radio Shack on them."

DW could be having a gross tuning problem. Most tx'ers are
automatically tuned from presets unless they happen to be solid state.
It's possible they may have had a malfunction in the disciminator that
tunes the selsyn motors that tune the caps, or one of the tuning belt
slipped, but you would think they would catch on quickly to that.
It's happened to us at VoA before.

The other possibility is that their final tube in that tx'er (assuming
it's not solid-state) is about to throw craps. It could very well be
detuning itself enough to throw out that garbage.

If I read your post correctly, I doubt it's a receiver issue since you
appear to be hearing it on both. If it doesn't happen again the next
day, you probably can safely assume that DW had a problem and just
didn't catch it promptly!

What radios are you using? My guess would be some sort of IF problem. If
both radios use the same IF then it could be overloading the circuits
and causing the problem. Some radios can cause symmetrical splatter (as
you put it) on both sides of the main freq, usually 910 khz below and
above.

R. Southern Highlands in PNG, 3275. Date/freq only letter in 68 days
for US $1.00 and English report. V/s: Andrew Meles, Director
Provincial Radio. Letter mentions that the Japanese government
donated a 10kW tx'er for them in 1990 which improved their strength.
Making amends for WWII I wonder?

That's actually a good point. I wonder if the radios' proximity to
each other could be causing an issue as well? If the IF's are off, it
could be a case of intermod by injection, but that is so rare as to be
a long shot.

Hope he does get back to us on what he finds.

> our shortwave radios because none of them say Radio Shack on them."

I'd forgotten about the parts having the Radio Shack name. I was
thinking just about all that remains is the Radio Shack brand
batteries.

Certainly they have been dropping the Radio Shack name from the
products in recent years, though I can't remember if it anticipated
the sale to Circuit City or came after. So those descendents of
the Minimus 7 speakers were branded Optimus for a while, and then
I think Radio Shack, and I think I've seen the same basic speaker under
the "Centrios" brand. In other words, the product remained but it
was rebranded.

So we have instead of "Radio Shack" or "Realistic" brands,
we see "Centrios" and "Nexxtech".

And of course, there have been well known brands in the flyers
in recent years, which was something that never happened in
the old days.

But you're right, the parts still carried the name. Of course,
four or five years ago, at least around here, the stores were
clearing out the parts, not just some but all. I remember getting
some neat items at about a third of the price, but also stumbled
on it late enough that some things I had wanted to stock up on
were already gone. The good thing about parts at Radio Shack
has always been that while the prices were often outrageous,
if you waited long enough the prices would become great when
the parts were cleared out.

Thanks for the reminder, I will check some of the stores
this week.

Shortly before I saw your post I did check http://www.radioshack.ca
to see if there was anything about clearing out Radio Shack brand items.
The site is gone, or rather, there is the press release about the
name change and a bit about the new name. ANd the new URL,
http://www.TheSourceCC.com

Interestingly, when I checked the flyer it says there is no current flyer, though the current Radio Shack one runs till May 8th. Perhaps that will be the last RS flyer in Canada.

Michael

270. Re: Emilia Earhart

Newsgroup: rec.radio.shortwave
Date: 2005-03-03 05:43:59 UTC
From: starman <starman@tech.net>
Message-ID: <42770F9F.58438F81@tech.net>
Source record: 20855

From the FWIW department:

The father of my best friend was in the Marines during WWII. He came upon a Japanese 'pill box' in the Philippines which was stocked with numerous documents and US money. Most surprisingly, he found a photograph of Emilia Earhart, standing in front of her plane with Japanese officers and soldiers next to her. She was smiling in the picture. He exclaimed in excitement, "Hey, it's Emilia Earhart!". At that moment an officer grabbed the picture from his hand and gave it to what he believes was a US intelligence officer who was waiting to see what they found in the pill box. My friend's father never saw the picture again or heard anything about what happened to it.

While on the Philippine island, he also became aware of a two engine aircraft similar to Earhart's 'Electra', which was being stored in a remote area of the air base, under a large camouflage net. He asked an officer what it was and was told not to go near it because it was booby trapped by the Japanese. Some time later the plane was flown from the air base to who knows where.

Since first hearing this story more than thirty years ago, I've wondered too what happened to that picture. If it was authentic, either somebody has got some explaining to do, or it may have been a fake made by the Japanese for propaganda purposes. I doubt we will ever know the truth. As for the plane, the booby trap story may have been a cover story to keep people away from it.

BTW- The loop antenna on top of Earhart's plane was for direction finding a radio signal from it's transmitter source. This was one way they used to navigate in those days. Earhart left behind the long trailing wire antenna that could have been used to receive the MW (500-Khz) signal because she wanted to reduce the aircraft weight for the long flight to Howland island. The HF (shortwave) frequencies were 3105 and 6210-Khz.

272. Re: Radio Shack in Canada

Newsgroup: rec.radio.shortwave
Date: 2005-05-03 06:31:59 UTC
From: Don Brady <dbrady@pobox.com>
Message-ID: <mi6e71tgo907mqbcu5b4bb7lqdstjn39t9@4ax.com>
Source record: 20857

Here is the story I referred to before:

http://www.globetechnology.com/servlet/story/RTGAM.20050429.gtrshack29/BNStory/Technology/

U.S.-based RadioShack Corp., which has won a court battle over the use of its name in Canada, is poised to begin an aggressive launch of its own stores under its namesake.

The rollout will make it even more difficult for Circuit City Stores Inc. of Richmond, Va., to raise awareness of its new banner --The Source by Circuit City -- after a ruling that its Canadian RadioShack outlets will have to be renamed, observers said.

"It's a challenge," said Wendy Evans of retailing consultancy Evans & Co. "RadioShack is such a well-known name. For the average person, there's going to be confusion, for sure. They'll wonder who is The Source by Circuit City."

Canadian RadioShack stores are currently run under a licensing agreement by InterTan Canada Ltd. But InterTan was acquired last year by Circuit City, setting off the legal fight over the RadioShack name.

Advertisements

Circuit City is the second-largest U.S. electronics chain and RadioShack didn't want its name -- and products -- to help bolster a key competitor.

A Texas court ruled recently that the Canadian stores will have to drop the name RadioShack by the end of June.

"We are committed to ensuring we maintain a strong brand presence in Canada as soon as possible," Mike Kowal, an executive vice-president at RadioShack, said as he arrived in Toronto yesterday on a trip to look for locations across the country.

"Our goal is to be in some key cities in a key number of locations by this Christmas . . . Our goal is to be aggressive this year, and to have stores and re-establish our presence within the country."

He said RadioShack is determined to remain the dominant small-store electronics specialty chain in Canada. The new stores will have an updated and brighter look, he said.

Observers said it will not be easy for Circuit City's renamed RadioShack stores to attract customers to the new banner. And with RadioShack entering the country with the name, the job will be even greater.

Both radios are DX-394's. The 910 kHz offset signal would be a 2nd IF image on one side only, and would be carrier with sidebands, not carrier-less splatter. The splatter is there with only one radio operating so it's not radio interaction. I sent a message to DW - we'll see if they reply or it clears up!

Tom

I believe there was a time recently (? 1 to 1.5 months ago) when a group of college students were on a ship doing some kind of research and it was hit by a 50 or 100 foot wave. It also seems the trip was cut very short!

http://www.findarticles.com/p/articles/mi_m0BQK/is_2_10/ai_n13470115 reveals but one such incident.

A Google search for "students on ship hit by rogue wave" - withOUT the quotes - revealed almost 75k hits.

This is probably the 70 foot wave reference they made. It was posted 4/17/05. http://www.freerepublic.com/focus/f-news/1385374/posts

Back to your REAL question. No. I don't know WHO or WHAT you were listening to -- but they were based in fact, even if every statement may not have been factual.

> causes distortion in receivers.

Distortion of this nature usually occurs only very close to the transmit site (a mile or so). Note that if KGO was transmitting distortion toward ldbk's gold country site, she also would hear it there on her stock car radio. But she says her car radio "tunes in KGO perfectly."

While KGO radiates less power toward the gold country than KNBR, the signal strengths of each are defined more by groundwave losses than by their radiated power. For example, the 2.5 mV/m groundwave field strength contour for KNBR passes about 60 miles beyond Sacramento, while for KGO it is about 20 miles beyond Sacramento -- and this includes the differences in their radiation patterns.

Probably the reception that ldbk notes is based more on the sensitivities of the radios, and the locations where they are used. Radios used inside a building have less signal to work with because the wiring in the building can act as a shield. Aluminum siding just about kills AM reception except in very strong signal areas. Also there could be a lot of interference in the building (light dimmers, touch lamps etc).

Rotating/moving the CC radio around the building may help reduce noise by capturing more signal and/or rejecting some of the local noise sources.

RF (retired broadcast engineer)

Clinton stopped two major terrorist attacks on our soil and despite your
propaganda, most of us liberals aren't too sensitive. I'm more than
willing to kick some ass.

>Bush inherited a cess pool of
> public ignorance and complacency ...

Absolute bullshit. We had 12 years of Republican and 8 years of
Democratic leadership. Our foreign policy and willingness to support
and finance dictatorial regimes in the Middle East and around the world
(as we continue to today) is what makes terrorism breed my friend. Both
parties and the American people deserve the blame for that. But

terrorism certainly didn't magically get organized during the Clinton years and you have to ask yourself as to why the Bush administration couldn't get their act together fast enough to stop a bunch of Muslims with box cutters. They were certainly warned coming into office.

Then why wasn't Jessie Helms arrested?

You Republicans are living in delusion regarding the media. Is there a liberal bias in the media? Only very slightly in some case. Is it anywhere nearly as pronounced and organized to destroy the other side as the right? Absolutely not. It's the Republicans who preach of a one-party solution through the media. And make no mistake, the so-called liberal media is more than willing to bring down one of their own (see Bill Clinton) as opposed to the conservative media which will defend the most corrupt of Republican politicians.

Ki-bec is the pronunciation in French, with the "i" between "key" and "kit". Kwi-bec is English and also acceptable. I'm sure he would not be able to say Saskatchewan - correct is Saskatchew'n , commonly mis-said Saskatchew-awn. You can spot an easterner in a heart beat this way. Try Newfoundland, which is correctly said NewfunLAND, or Charlottetown - sharla-town. And the old joke Toronto - tronna. C'naid'jun, eh?

An interesting couple of trends for American and Canadian English is making the first vowel long: eek-conomic instead of ek-conomic, and the clipping or shortening of the final vowel in other words: candi-dit candi-date , dee-fense d'fense . The second is which syllable is stressed: MARSH-mellow marsh-MELLOW , BIG-bird big-BIRD . The first in each of these is American, the second Canadian.

If we're complaining, the most annoying thing is the backwards US dates. Today is 03/05/2005 dd/mm/yyyy, though the trend is to avoid the number for the month and go to 03 May 2005 to avoid confusion with 05 March 2005.

Don't shout! Here's a few.

-Canada is the second largest country in the world.
-Most of Canada is forest. Much of it frozen.
-Canada and the US share the longest undefended border in the world.
-Canada has the longest ocean coastline in the world.
-Canada has 1/5 of the world's fresh water.
-Length is measured in kilometres and you say it kill-awm-eaters, or just
"clicks", except a person's height and in football.
-football has three downs and backfield motion is allowed before the
snap.The field is 110 yards long.
-temperature is in degrees Celcius.
-the winningest professional sports franchise anywhere is the Montreal

Canadiens.
-They are called Inuit, not Eskimos.
-There are only two Inuit words for snow.
-They are called First Nations and they live on reserves, not reservations.
-You are in grade one, not in first grade.
-No-one lives in an igloo, nor goes to school in one.
-Police don't point a gun at you when they stop you.
-it is harder to have a drive by knifing than a drive by shooting.
-a 'two-four' is a big case of beer.
-If you say "you-all", a Canadian will look behind him or herself.
-Talking louder will not make a French-speaking person understand you.
-A francophone is a french-speaking person, an anglophone speaks English.
-There are 10 provinces and 3 territories in Canada.
-You can get Cuban cigars here.
-American beer appears to Canadians to be like making love in a canoe. It's
f---ing close to water. ;)

Typical Republican non-sequitur. You can't debate real issues until you at least acknowledge some basic facts.

Bottom line is this...all Americans don't want terrorism on our soil. Yet your hatred of Democrats creates an unwillingness on your part to look at American foreign policy and our continued support and financing of terrorist nations. You do understand that American money which goes into Saudi Arabia trickles down to the Wahabi clerics, right? Ever heard of fuel cell technology? Why does the President fund Saudi Arabia and yet won't propose a bill to fund the building up of a fuel cell delivering infrastructure? The technology is certainly here. And don't mistake for a second that I don't blame both parties for our foreign policy. Blame America? It's called taking responsibility and making necessary changes for our country's long-term survival, not short term power plays which benefit the elite, of which Dubya is certainly a member despite his phony Texas drawl.

The format doesn't lend itself to critical thinking. Air America is essentially a play on right-wing talk radio. Does it elevate the debate in this nation to a higher ground? Unfortunately, no. It's a reaction to a format and formula which essentially preaches hate against Democrats, all the while preaching against Democrat hatred towards the right. It's a game which appeals to people of a tabloid mindset IMO. And that's too many Americans these days unfortunately.

On a horrible, suburban, daytime station that has limited coverage and does
not even go on the air till 7:30 AM in winter, and goes off by
mid-afternoon.

Quote:
"
Excerpt from this article by Robert Feder, in the Sun-Times on May 3, 2005
(scroll down about halfway):

*In anticipation of a format switch under owner Newsweb Corp., WAIT-AM (850)
changes call letters today to WCPT (for "Chicago's Progressive Talk").
Picking up WAIT's call letters is Newsweb's WSCN-AM (820).
As tipped here in February, expect an announcement any day that the suburban
daytime station will become a showcase for the liberal voices of Air America
Radio's Al Franken, Jerry Springer and Randi Rhodes along with Jones Radio
Networks' Ed Schultz. "

>
> They expect to start turning a profit later this year

Not likely.

> Ratings in Portland, which were good to begin with, are up.

Ratings in Portland, OR, which were good at the start, are off the mid-2004 peak by 20%. They have now slipped over two successive surveys. The ratings in Portland, ME, are non existent. Take your pick.

Some time ago I ran across a web site maintained by folks who apply archaeological methods to an ongoing search of the presumed crash site. They provide an interesting collection of material on the radio transmissions heard from Earhart's plane and they're well worth perusing if you're interested in frequencies used.

http://www.tighar.org/Projects/Earhart/Bulletins/37
_ItascaLogs/Itascalog.html

I believe that somewhere among these pages is a description of the rigs and antenna system on the plane.

There are also some speculations that portions of these and other logs may be inaccurate:

Franken can say just about whatever he wants. That does not however make it true.

I can't receive Air America here and I have no soundcard here in this computer. Could someone possibly burn me a standard CD of Air America so's I might be able to hear it first hand?

Coast Guard COMSTA Kodiak, Alaska coming in surprisingly well this afternoon on 8983 calling Coast Guard aircraft 6006 which seems a bit odd as the WUN site has 6006 homeplate as Mobile, Alabama.

Even Pt. Reyes, California is booming in this afternoon calling 1716, homeplate Sacramento.

I used to pick up WAIT in the early 1970s when I lived in Reeseville WI near Waterloo. Weren't they originally the station on 820? They had a fairly decent signal back then.

325. Some notes on using a PCR1000 on SW

Newsgroup: rec.radio.shortwave
Date: 2005-05-03 18:01:22 UTC
From: r2000swler@hotmail.com
Message-ID: <1115143282.055965.7770@g14g2000cwa.googlegroups.com>
Source record: 20962

The Icom PCR1000 is a wide band 100KHz~1200MHz receiver.
Many get one because of that wide frequency coverage.
I got one in a trade and while it does clearly work on HF,
it is very prone to overload if a decent antenna is used.

Over the weekend we visited a friend who has just completed
her PHD and she clued me into to some usefull addtions
to the PCR1000. First get a Kiwa BCB high pass filter
if you intend to use the PCR1000 on HF. Removing the signals
from MW realy helps clean up the receiver. Use an external
attenuator, the internal one can add gross distortion.

If one is into LF then use the Kiwa LP MW reject filter.
And again an external attenuator is a good idea.

Another usefull filter is a FM BCB (88~108MHz) band reject.
This cleans up VHS and UHF more then HF/LF but the improvement
is probably worth while.

We used an attenuator with 1dB steps down to 120 dB, but a 10dB
and a 20dB would be more then enough.

With these outboard additions the PCR1000 becomes a much usefull
HF/LF receiver. Not in the league of a "real" SW receiver, but
much better then it comes out of the box.

Terry

Are you an idiot? Who cares what he is? He made a direct threat
against the President of the United States. In his position especially,
he should have been held to a higher standard. All bets are off now,
unfortunately I might add. Fixation on power and getting one up on
somebody means more than basic human respect.

I just checked out the changes on 820 while surfing and searching. I don't
remember 850 whem I was AM DXing many, many eons ago.

Sad to hear about WCKY. That was another of my old favorites from the late
1950s. I was using a (military B-17) Belmont BC-348R receiver back then
when I did a lot of 160 and 80 meter DXing as a ham, and I would tune in the
Rainey Family on CKY for a change of pace. One of their most frequent
recordings was "We need a whole lot more of Jesus, and a whole lot less of
rock and roll."

An aircraft's HOMEPLATE is merely that aircraft's "home" airfield,
which is not necessarily the one from which it is operating.

Oops! Spelled Raney wrong. And almost got the name of the song right.

However, I found the lyrics to that tune:
http://www.cowboylyrics.com/tabs/davis-skeeter/we-need-more-of-jesus-6709.html

Artist/Band: Davis Skeeter Tabs, Guitar Chords
Song: We Need More Of Jesus Tab

WE NEED A WHOLE LOT MORE OF JESUS (And A Lot Less Rock And Roll)
Recorded by: Skeeter Davis
Written by: Wayne Raney CAPO: 1st FRET/KEY: G#/PLAY: G
[G] You can read it in the mornin' paper
[C] Hear it on the radio
Crime is sweepin' our [G] nation
This world is about to [D7] go
We need a [G] good old case of salvation
To put the [C] love of God in our soul
We need a whole lot more of [G] Jesus
And a [D7] lot less rock and [G] roll.
We need more old-time camp meetin's
Lots more prayers of faith
Faith that will move mountains
Save our soul from the burning wave
We need a good old case of salvation
To put the love of God in our souls
We need a whole lot more of Jesus
And a lot less rock and roll.
We need more old-fashioned preachers
Pourin' out their hearts in prayer
When you are in their presence
You know that the Lord is there
We need a nation-wide revival
To put the love of God in our soul
We need a whole lot more of Jesus

And a lot less rock and roll. TAG:
[G] We need a [C] whole lot more of [G] Jesus
And a [D7] lot less rock and [G] roll.

No kidding... still a bit odd as the homeplate is GENERALLY where it does operate from. And the fact that Kodiak was trying to communicate with them simply indicates that a change may have taken place which is not currently listed on WUN.

Yes, it has a filament bulb. I'm just wondering if the filament bulb is interchangable with the LED replacement bulb. I sent an email to Eton, but they didn't answer yet.

I found the PCR-1000 on par with the Sony 2010 on HF.
On HF I 'm using a Yaesu FRT-7700 preselector wich has a built-in
attenuator on the PCR-1000 and on the 2010 when attaching a multiple
FD4-antenna. Works like a charm. But the NRD-525 runs circles around them...
Have no problems on VHF/UHF with a Diamomnd discone on the FM
broadcastband in the middle of Berlin/Germany.

Have fun with this toy.

That's more like it. Show some fucking courage. If we give up
liberty because we're afraid the terrorists (and the Carlyle Group)
have won.

Osama Bin Ladin was a CIA operative. Why has Bush allowed him to
remain free?

It's true that Senators cannot be charged for anything they say in
session.

How about Gordon Liddy telling people to shoot Federal agents in the
head?

You finally took a long time to admit that you're wrong, even though the point was mentioned several times that your flawed reference (a self-serving blog, at that) was about 10 months old. Then you complain that your being caught lying was but a small point. (Typical radiclib behavior BTW. Been there [PR of Madison], seen that before...)

Face it! The big picture to you is presenting black propaganda (talking points, perhaps?) as truth and quietly backing down when confronted with the facts. => Exit stage left, way left...

Let's see! The following was your original (bogus) post: I didn't see any retraction of yours. I'm a technical editor (embedded micrprocessors) and not a coward to admit when I'm in error. If you were a writer whom I edit, I'd be all over you for your mistakes if you refuse to heed to reason.

"Majority Report is the #1 talk radio show in the 25-54 demographic in
NYC for its time slot.
Majority Report: 2.9
WABC: 2.7
WOR: 1.2
Who does WOR feature in that time slot? Savage and Laura Ingraham.
Air America came in as the second-highest-ranked talk network in NYC
across the board."

> from. And the fact that Kodiak was trying to communicate with them simply indicates
> that a change may have taken place which is not currently listed on WUN.

That might have gotten you somewhere, but then you had to duck into a
phone booth, turn into Super Jerk, and come out with:

>I just love it when the debutantes think they are telling me something they think I
>don't know!

Very well, Mr. Know-It-All, go ahead and stay stupid, and excuse me
for trying to help. You can now go try to figure out for yourself why
CG 6006 is operating from AIRSTA Sitka instead of ATC Mobile where it
is homeplated, because I'm sure not going to tell you. Oh, and welcome
to my killfile, which is already so loaded with mouthy, condescending
jerks such as yourself that one more won't even be noticed.

I'm sure I'll be able to figure it out. I have sources! And, I'm hardly 'stupid'.

You offered no 'help' what so ever to begin with other than a simple dissertation on 'homeplate'. If you knew why CG 6006 was there at the time perhaps you should have stated such, instead you simply told me that you were a 'tard, and I appreciate that information.

You were the original 'mouthy' one telling me what I already knew.

See ya, 'tard boy!

357. New edition of Broadcasts in English

Newsgroup: rec.radio.shortwave
Date: 2005-05-03 21:47:28 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <d58rhgkej1@xuxa.iecc.com>
Source record: 20992
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

The Summer 2005 (A05) edition of Broadcasts in English is now available from the British DX Club. It was compiled by Dave Kenny and includes details of all currently known international broadcasts in English on shortwave and mediumwave for the A05 schedule period. The 32-page booklet is in time order throughout and covers all target areas. Transmitter sites are given where known. It also includes a comprehensive guide to DX and Media Programmes; schedules for Digital Radio Mondiale (DRM) transmissions and World Radio Network in English to Europe.

Copies are available at the following prices (postage included):

United Kingdom - 2 pounds sterling
Overseas - 6 International Reply Coupons; 5 Euros or 5 US Dollars

Sterling payments by cheque/postal order to "British DX Club"
Dollar or Euro payments in cash.
We can now accept payment via Paypal - please email for details.
secretary@bdxc.org.uk

All orders/enquiries to:
British DX Club, 126 Bargery Road, Catford, London SE6 2LR, UK

Or visit the BDXC-UK web site at http://www.bdxc.org.uk

358. Yet Another Antenna Question

Newsgroup: rec.radio.shortwave

How far from powerlines and power sources (such as anything in the house) would a shortwave antenna need to be for the noise to noticably drop off? I have a spot in mind for putting one up between two trees which should be about 80 feet from my house and at least as much from my neighbors. Thanks!

So, does KGO get bad reception in your car when it is parked in the
driveway? If so, I guess that would clinch it.

Experiment with it. That's really the best way. I would try as many
different configurations and locations as I could till I got the best
results. No one can tell you what's best for your location, radio and ear.

Lucky

365. Re: AM Radio Question

David,
.
Yes that is true KKOH {KOH} has a very good signal in the
Gold Country around Twain Harte, CA (Sonora) especially
when the Radio is positioned to Null-Out the SF Bay Area
(Due East) and Peak Signals from the North-and-South.
.
KKOH => http://tinyurl.com/cqdfe
Predicted Daytime Coverage Pattern for
KKOH-AM @ 780 kHz, Reno, NV
http://www.radio-locator.com/cgi-bin/pat?call=kkoh&service=AM&status=L&hours=D
.
The 'local' AM Radio Station in Sonora, CA is KVML with 940 Watts
http://www.radio-locator.com/cgi-bin/info?call=KVML&service=AM
Predicted Coverage Pattern for
KVML-AM @ 1450 kHz, Sonora, CA
http://www.radio-locator.com/cgi-bin/pat?call=KVML&service=AM&status=L&hours=U

.
The AM Radio Station that many local's in the Sonora Area
like to listen to is KSTE-AM @ 650 kHz, Rancho Cordova, CA
http://www.radio-locator.com/cgi-bin/info?call=KSTE&service=AM
KSTE's Signal is good during daylight hours with 21.4 KW
but at night the power out put drops to 920 Watts (1/22th)
Predicted Daytime Coverage Pattern for
KSTE-AM @ 650 kHz, Rancho Cordova, CA
http://www.radio-locator.com/cgi-bin/pat?call=KSTE&service=AM&status=L&hours=D

Predicted Night Time Coverage Pattern for
KSTE-AM @ 650 kHz, Rancho Cordova, CA
http://www.radio-locator.com/cgi-bin/pat?call=KSTE&service=AM&status=L&hours=N

At Night if you want to hear KSTE then one of the better
AM/MW Radios CCRadio; GE Superadio; Grundig S350; ETC.
Plus a One Metre Loop Antenna can make routine Nightime
Listening of KSTE an enjoyable experience.
.
iane ~ RHF
. . . . .

Yes they are running 99 watts give or take a couple. The antenna is a longwire on the roof of a retirement/nursing home. They will be on for 2 weeks with old time radio programs and NOS/BBD music.

Location western side of Winnipeg MB Canada

Two days in a row and not on any other station this evening. The 9735kHz broadcast schedule from Bonaire is 0200-0600UTC. I'm hoping someone else will check for splatter at 9845 and 9625, too. It's 01:51 UT now - I'm standing by...

There it is again - 3 days running. Interestingly, Bonaire transmits on 9845 almost up to 0200 but the 9735 transmitter is on with carrier only before 0200 and before 9845 shuts off so it's not the same transmitter. The splatter is a little easier to detect tonight at 9850 and 9630 due to other stations coming in tonight on 9845 and 9625. Does anybody else hear it?

Phoenix Man Dies After Being Tasered

http://channels.netscape.com/ns/news/story.jsp?id=2005050316440001150542
&dt=20050503164400&w=APO&coview=

13 Taser related deaths in the U.S. and Canada in the first three months of this year, compared with 6 for the same time period last year. Interesting. I listen daily to the police radio in my area, we have at least one Taser Queen officer, she must literally Tase 10 people a month, at the least. Yesterday, two male officers on a call for a psychotic patient, were asked by the dispatch if one of them had a Taser. The one officer replied "oh yeah", in a very exuberant manner. Guess what? He called in minutes later, asking for an ambulance, as he had to Tase the man. Imagine that.

Every time they Tase someone here, they take him/her to the hospital. Recently, the officer remained the Tased patient at the hospital for at least 2 hours, and had to be relieved by another officer. Too bad that the hospital doesn't give priority to Tased patients, but then again, I guess they would need to build another wing.

This area doesn't have the manpower to waste babysitting Taser victims in the hospital. Of course, those of you that are blindly Pro law enforcement will balk, after all being a cop is a dangerous job. But so is being a fireman, a lineman, a chemical plant worker, a Lobster Fisherman, etc. If the officers are so intimidated by their work, they have the freedom to get a desk job somewhere.

We can't condone the sacrifice of the Rights and Freedoms of ordinary Americans to make the world a safer place for cops. Of course, none of this will happen to you. My sons were accosted by 2 Pittsburgh cops after my son had made an illegal left turn. He had his license, owners and insurance card, the car was registered and inspected. Ordinarily, they issue a ticket and you're on your way. Not so this time. One officer proceeded as expected, the other stood there and tried to instigate my sons into an outburst. The stereo in the car was removed for service (I had it at my house), and one officer asked about the missing radio by asking "what the fuck is the story with the hole in the dash"? My son explained. Shortly after that, the same officer, while looking at the outside of the car said "what a piece of shit this car is, but I guess there's an ass for every seat".

He continued by insisting that my son was drunk, they reached in and searched the inside of the car, such as in the door storage areas, and he kept saying "we know that you have drugs, just tell us, and we'll let you go". This went on for about 15 minutes, when my oldest son (28 years old,

he wasn't the driver), finally said "our uncle is a police officer". The 2 cops got a chuckle out of that, and they said "oh yeah, where does he work"? My son gave them the details. (their uncle is a detective with the Pittsburgh Police). The officers grew silent and went off to the side to talk to each other. They returned and said that they were going to let them go, as long as my son thought he was fit to drive.

What would have happened if my sons lost their temper? Taser time! Never mind that they didn't have anything for the officers to hold them for. They were just going to anger my sons until they got mad, and charge them with something. Yes yes, he did make an illegal turn, this would justify a ticket, not the harassment.

Dr. Artaud

I have a couple of PAR Inc filters that Dale makes and they are great
for BCB intermod elimination. There are 3 MW stations within a 4 mile
radius of me and the PAR filters totally wipe 'em out.

Does it matter who your father, or you for that matter, names in his will?

There were TWELVE tribes of Israel. Judah was but one of them. All
"Jews" are not sons of Abraham and therefore God's promises to Abraham
and his descendants do not apply to them.

I suggest everyone take the survey, and get the book. :-)

I just checked and did not hear the splatter around 04:00 UTC.

I noted DW went off the air for a minute around 03:59 UTC.

I have stations on 9625 and 9630 but nothing on 9845 and 9850.

DW is very strong at S10 on 9735.

Abraham begot Isaac and Isaac begot Jacob. Jacob's name was changed to Israel and he is sometimes called Jacob/Israel. Jacob/Israel had twelve sons and they became the twelve tribes of Israel.

But guess what. Abraham had more than just Isaac, even though God told him that it was through Sarah that the world would be blessed. His other son was through the bond woman and his descendants became the Arab nations. So, yes, more than the "twelve tribes" can lawfully and legally claim to be "sons of Abraham" -- The Arabs Can -- but I doubt seriously that the Khazars can and that is about 90% of what claims to be Jews in the nation of Israel today. They were "converts" to Judaism.

Get the book. Read the book. Better still, read The Book, The Holy Bible!

Your "christian identity" reminds me of the Jewess Gail Ripplinger who wrote the book "New Age Versions" and pretended to be "defending" the Word of God, The King James (1611) Version, while NEVER capitalizing the word Bible! Oh, but she used plenty of incantations and spells in her little book. Maybe they worked because she surely hooked a lot of "fish" with it!

Additional: My spell checker even wanted to capitalize the word Christian but YOU are far to intelligent to do that! Aren't you? :-(

I ordered the Select-A-Tenna M-541 last week, received it yesterday, installed today and, voila - it works exactly as advertised, I can now get KFI640 loud and clear inside my office. Very hapy with it. This is in a completely different league compared to the Terk line up at Best Buy. Thanks for the tip, RHF!

In Paper, In Practice: A response to the China's 'White Paper' on Human Rights
By News Report
May 1, 2005, 12:34

PUT THIS IN YOUR PIPE AND SMOKE IT.

TYC[Sunday, May 01, 2005 15:58]

Foreword

The release of the two successive 'White Papers' by the State Council Information Office of the People's Republic of China (PRC) this April vindicates the truth of the maxim, " It entails a thousand lies to conceal a lie". Chinese Communist Party(CCP), in its 56 oppressive years of rule, has in a customary drive to delude the world, released over a thirty 'White Papers', a record by any regime in this modern times. The recent heightened spree to churn out series of 'white papers' is yet another desperate bid to enhance its global credibility. But the leaders of China had utterly failed to realize the wisdom that the very necessity to substantiate, and justify persistently, reveals a gross underlying faux pas.

The White Paper of the 13 th April entitled, "China's Progress in Human Rights in 2004" begin with the wild and fictitious assertion of the year 2004 being " an important year for China in building a well-off society in an all-round way...that saw progress in human rights undertakings.... And...realize the goal of establishing a government under the rule of law after making sustained efforts ."

Despite these proclamations, China remains indicted for a sheer lack of freedom, human rights and rule of law in every human rights reports the world over, primarily by UNCHR, US States Departments, Parliaments of European Union, Australia, Italy, Canada and Amnesty International, Human Rights Watch, Freedom House, Laogai Research Foundation, Tibet Information Network, Tibetan Centre for Human Rights and Democracy, National Labour Committee, Independent Tibet Network, China Rights Forum, Uygyur Information Agency, Cardinal Kung Foundation, Carnegie Endowment for International Peace, Falun Dafa Information Centre, Free Church for China, China Aid Association and innumerable media, scholars and NGOs. The reports unanimously criticized China as "a highly repressive state" where the government routinely violates basic freedoms. These reports and the testimonies of the people coming into exile etc speak in stark contrast to the China 's White Paper sham; that of sad ground realities in practice conflicting those in paper.

The White Paper unequivocally claims that China is a modern State with democracy, freedom and rule of law in practice, guaranteeing prosperity and peace to the Chinese people. And to buttress this argument, the "White Paper", as always, rattles off an impressive list of statistics. But these are mostly fudged with sparse grounding. The authenticities of the Chinese official figures are, invariably, questionable, as they are routinely fudged to bolster China as an attractive proposition for investors. Even former Premier Zhu Rongji once admitted the unreliability of Chinese Government statistics. Zhu said, "The statistics are manipulated by the local authorities for their own self interest". The Chinese Communist Party (CCP), also, undertake similar statistical manipulation with greater aplomb.

1. Democracy or Pseudo Democracy in China ?

The White paper's effort to project a pseudo democracy in China with the statement of, " promoting democracy in political affairs and... exercising its democratic rights " , is in contradiction with former President Jiang Zemin's speech in December 1998, where he made a categorical declaration to the entire nation that China would never tread the path of democracy. Likewise, President Hu Jintao, in a nationally televised address on 16th September 2004 also expressed his reluctance to embrace Western-style multiparty democracy by saying, "History indicates that indiscriminately copying Western political systems is a blind alley for China," He further pointed out the failure of "China's bourgeois republic system" under Sun Yat Sen's some 60 years ago as proof that China is not suited to democracy. Even the popular author, Steven W Mosher argued that the western beliefs that China is headed for Democratic change are based on wishful thinking. China is not only the world's most populous nation, but also one that is avowedly hostile to democracy in general.

On April 26, 2004, Beijing came out openly and declared the barring of the popular elections for Hong Kong 's chief executive in 2007, and ruled out any expanded use of democratic voting for the legislature in 2008. Experts believe that one of the objectives of adoption of the anti-secession law early this year is a clear attempt to nib the bud of people's aspirations for more freedom and democracy in Hong Kong , China and Taiwan .

Nonetheless, to justify itself of a prevalent democratic practice in China , The 'White Paper' cited, " The National People's Congress (NPC) and the local people's congresses at various levels are the organs through which the people exercise state powe r." But in reality, the NPC enacts a drama of democracy, which doesn't enjoy any real authority over the policy directions, law etc. that it approves. The people's congresses are not subject to any liability to the people and are not answerable to the people for its decisions, which otherwise forms the true essence of democratic representations.

The much-vaunted People's Congress is clearly a constitutional farce and matters the least when it comes to the actual formulation of state policies and enactment of laws. Any degree of representation in such

congresses along with holding of nominal posts in its standing committees is more of a necessity of constitutional fiction than true democratic representation.

China has not met even the minimum of requirements to qualify for acceptance as a democratic country. Jasper Becker points out, " China is now one of the last countries in the world without a functioning parliament. The National People's Congress does exist but it has no building of its own, no permanent staff or offices, and it assemble for just ten days a year. During the rest of the year only members of the Standing Committee; which is made up of senior Party officials, meet. Even the uncomplimentary label of debating society usually attached to toothless assemblies or powerless political organizations cannot be applied to China 's Congress, as no debates of any kind are tolerated from the members of that body. A western correspondent at the party Congress reported that the discussions sounded like recitations and the main speech of the president was notable mostly for its vagueness".

At the National People's Congress, which meets annually, to review and approve major new policy directions, laws, the budget, and major personnel changes- the State Council presents the initiatives for consideration only after previous endorsement by the Communist Party's Central Committee.

According to a report Titled, "The Worst of the Worst: The World's Most Repressive Regime 2005, released during the 61 st Session of UN Commission on Human Rights at Geneva, the US based NGO, Freedom House, severely criticized China stating, "China remains a highly authoritarian state under the complete control of the Chinese Communist Party (CCP). The Chinese Government's pledge to uphold the rule of law has been regularly compromised by continuing widespread official corruption, Party interference in the justice system, and a culture of impunity for officials and their families. Authorities continue to censor news media. Civil society is also constrained and almost entire NGOs are government-controlled. China prohibits independent domestic human rights organizations and bars entry to international human rights organizations. Chinese citizens who contact international rights groups risk imprisonment. Chinese citizens cannot change their government democratically or express their opposition to its policies".

The CCP holds all political power, and party members hold almost all top national and local governmental, police, and military posts. Direct elections of officials above the village level is expressly forbidden. The parliament-the National People's Congress (NPC)-elects the top officials, but the NPC itself is controlled by the CCP. There is one opposition party, the China Democratic Party, but the government suppresses its activities and it exists, for all practical purposes, in theory only. The only competitive elections in China are for village committees, which are not in any case considered government bodies, and even these are tightly controlled by the CCP.

China 's communist rulers in Beijing wield absolute power, and few people dare defy their edicts openly. But the edict from on high are as likely to be honored in breach as in compliance, with local governments reporting upwards that they have dutifully fulfilled the ambitious targets. To make these lies stick, they do everything in their power to prevent citizens from bypassing the bureaucratic ladder and asking Beijing for help.

2 . Economic Boom or Doom ?

Today, China vigorously flaunts its international market avenues to assert its presence in the international arena. Experts say, "In the history of commerce, there has been no greater hype than that generated by the China trade". The white Paper thus categorically trumpets the success of the China 's economy stating, " China 's gross domestic product (GDP) reached 13,650 billion Yuan, an increase of 9.5 percent over the previous year. The people's overall living standard and quality of life were improved considerably, and the consumption pattern of the society continued its shift from one of basic living to one of modern living ". Yet the studies conducted by numerous experts reveal a grim truth of a dooming China . Beneath the veil of the rapid growth of the Chinese economy lies the question of whether or not it entails underlying dooming factors. While high economic growth is an aspect that many countries seek, it cannot be the sole aim of a nation's economy

Index estimated in June 2002 that China 's non-performing loans exceed 50% of its total bank loans. It would take China 20 years before the non-performing loan rate would be brought down to a "manageable" 5%. And that alone would cast $ 518 billion.

Moody's also released a credit rating report entitled, " China 's Banking System: Tight Rope Walk", stating that China 's banking system has become technically bankrupt. Some Western scholars (such Nicholas Lardy at Brookings Institution) say that China 's financial crisis is only short by one "trigger" to be set off. Far East Economic Review published "On the Road to Ruin" (Lague 2002), which talks about China 's banking problems. Not long ago, Ma Guonan, the economist from HK International Clearance Bank, said that if the Chinese government still does not solve the fundamental problems of the non-performing loans of its state banks, it is impossible for China 's economy to continue with its current growth. Studwell (2002) and Gordon Chang (2001) have both sent this kind of warning message before. The only question remains: When the disaster occurs, how serious will it be, and who will pay what is due?

"India will pip China in economic marathon" by Saubhik Chakrabarti, in Hindustan Times, 8 April, this year, analysing Sino-Indo eco-structure finds, "despite China's great leap forward in economic development which is fuelled by unrealistic and uneconomical investment of over 40% of its GDP, India's efficient capital management, firm banking system and strong and thriving private sectors will in the long run pip China".

Mr Saubhik predicts," China 's invest around 40% of its GDP and it takes in more than $40 billion in foreign direct investment(FDI) every year. India invest around a quarter ofits GDP and its average annual FDI inflow is less than $4 billion. That means while China has grown much faster, it has, proportionately, used much more capital than India . If this trend continues, it advantage India in the long run. Golman Sachs says by 2020, India could outstrip China 's rate of growth. China can't bank on its banks. The ratio of non-performing assets(NPAs) to total assets- a measure of bad loans- of India's was 4% in 2002-2003 and 3.3% in 2003-2004, whereas in China non-performing loans as a proportion of total loans was 28% in 2002 and 13.2% in 2004. Considering the deficit in its social insurance and pension fund, the internal and external debt of the Chinese government would exceed its GDP of about $1,100 billion. The problem in China 's banking system is far more serious than that in Japan . The non-performing loans in Japan 's banks only account for 10% of its GDP, while for China it is 43%.

" China 's growth, while spectacular, is being fuelled by a loan binge that could well produce a Himalayan hangover. India 's financial system, compared to China 's, is ultra safe. Its recent data indicates that private-owned registered businesses in China may finally be outnumbering state-owned enterprises (SOE's). But most private businesses are small where the average employee strength is less than 15 and average capital less than $ 150,000. India, by comparison, has a thriving private sector with a large number of super-sized, internationally competitive firms" he added.

In the Far Eastern Economic Review survey of Asian entrepreneurship conducted two years back, India ranked first with Infosys ranked first as the best firm. Ten Indian companies made it to the top, compared to only two from Mainland China. So, internal resources account for almost 60 % of China's private firms' investment. The figure for Indian firms is less than 30%. A study in 2000 by the Chinese Academy of Social Sciences observed that in China "private and individual enterprises are discriminated against in numerous policies and regulations. The legal, policy, and market environment is unfair and inconsistent". Chinese government exercises tight control over media, foreign exchange and foreign banks. Since there is no freedom of the press, Chinese people blindly believe in the words of the government that their savings in the banks are safe. Due to the foreign exchange control, everyday people cannot exchange RMB easily. Now that China has joined the WTO, it still has not let go of its strict constraint of RMB operation by foreign banks. Consequently, Chinese people have no other choice but to deposit their money in state banks.

When calculating average income, the Statistic Bureau of China did not include reports from the local provinces. In 2001, with the exception of the Yunnan province, all the local provinces reported growth rates higher than that of the national average. Upon further investigation, the Bureau of Statistics found 62,000 false reports between the months of May and October (Rawski 2002).

In addition, there are also others who question China's growth rate. These include: Lawrence Klein, winner of the Nobel economics prize, Lester Thurow of MIT, Lehman Brother of the Economists Magazine, the Moody credit agency, etc. (GaoShang 2002). Lester Thurow has pointed out that 80% of China consists of rural areas that have virtually no growth. Since cities only occupy 20% of the country, the urban areas must grow substantially in order to achieve national growth of 7%. Keep in mind, that in 2001 Hong Kong and the Chinese financial center experienced virtually no growth. How could other cities experience such a fast growth rate? Arthur Waldron reminds us that, Zhu Rongji once stated in public, "If the government had not initiated a large amount of capitol borrowing, the Chinese economy would have already collapsed in 1998." Therefore is it possible to reach a 10% growth rate based upon government borrowing? According to Rawski's estimate, during the years of 1998 and 1999, China's growth rate fell between 2% and -2%, 2-3% in the year 2000, and 3-4% in 2001. The estimates from other economic officials vary insignificantly. Governmental officials and scholars of China have tried to provide an explanation on this issue, but it is difficult to discern the validity of their responses.

Foreign experts are not the only presently who question the economic growth. China's own, native experts also are puzzled by this phenomenon. Punai Dong, Vice Director of the Economic Committee of the People's Political Consultative Conference, has mentioned eight major conflicts of the Chinese economy: (1) the economy is growing at a fast speed, but the price of the commodities continues drop and the unemployment rate is constantly rising; (2) housing prices still hold an upward trend, causing the gap between the rich urban areas and poor rural areas to enlarge; (3) Bank deposits increases, but some corporations are short on capital; (4) governmental officials still receive a raise in their salaries, while the deficit is respectively on the rise especially in some local areas. (5) Since September of 2001, the overall deficit trend continues to be strong; (6) as the coastal cities boom, a severing gap in growth of many in-land cities is developing; (7) Natural resources are progressively becoming short in supply and waste disposal is becoming a heavily impending issue; and (8) environmental pollution continues to increase.

E xpressways, skyscrapers, shopping malls and flashing lights and designer labels, new China's charms are endless. But these glitz and glamour cannot dazzle the world for long, when one finds the real China ridden with endless crisis and a gross discontentment of the people against the Government. China continues to be a nation ridden with numerous problems including human rights violation, poverty, unemployment, illiteracy, high living cost, starvation, public dissent and social instability and many more. Other pressing problems include corruption, which affects every level of society, and the growing rate of HIV infection. A downside of the economic boom has been environmental degradation; China is home to many of the world's most-polluted cities.

The booming economy is not all that blooming. Over 70% of the foreign investments in China are by the nonresident Chinese from Taiwan, Hong Kong, United States and Europe. World Bank estimates over 150 million Chinese living in the abject poverty and recently it warned that the situation would soon become unmanageable with catastrophic consequences for future generations. World Bank further says three-fourth of China's rivers are polluted and more than 700 million people drink contaminated water. The Chinese government too stated that by 2030, the water supply is expected to fall below 1,700 cubic meters per person, which is dangerously low. The Government estimates that 400 of china's 668 cities are dealing with water shortages.

According to economic pundits, China's export success is not the result of indigenous creativity and manufacturing excellence, but essentially the result of the heartless exploitation of a desperate, disenfranchised and near-enslaved labor force by a cynical government and piratical international corporations. Even if China's blazing GDP growth of 9.4% this year moderates to 8% in 2005, as the Chinese Academy of Social Science predicts.... China is unable to meet its energy needs solely through domestic production. " China has been singularly unsuccessful in its oversee ventures. They are trying to learn in a decade what it has taken big foreign companies a century to master" says Jim Brock, a Beijing based Energy Consultant.

3. Development or Destruction?

The industrial developments haven't come with a small price. A senior Chinese official; a deputy head of the State Environmental Protection Administration, Mr Pan Yue, told the BBC on 23 rd Sept, 2004, that China's environmental problems have reached crisis levels. He said "China's industrial development was unsustainable, because its resources could not cope. Environmental problems like pollution, acid rain and contaminated rivers have only now become a key policy issue. We've been talking about sustainable development for 12 years, but it's not been carried out properly. Now we've learnt the lesson. We need new laws and regulations; otherwise we're just talking slogans. He said previous attempts to create a cleaner environment had not been carried out properly and there would now be a raft of new laws and regulations aimed at promoting sustainable development."

On 7 th March this year, In sheer contradiction to the White Paper's claim, Mr Pan Yue of the Ministry of Environment, speaking to a German Magazine, Der Spiegel, again acknowledged that "The Chinese Miracle will End Soon".

Mr Pan said, " the economic strides made by China comes at a huge cost to the country's environment which will soon overwhelm the country creating millions of "environmental refugees." He further said, "We are using too many raw materials to sustain this growth. To produce goods worth $10,000, for example, we need seven times more resources than Japan, nearly six times more than the United States and, perhaps most embarrassing, nearly three times more than India. Our raw materials are scarce, we don't have enough land, and our population

is constantly growing. Cities are growing but desert areas are expanding at the same time; habitable and usable land has been halved over the past 50 years. Acid rain is falling on one third of the Chinese territory; half of the water in our seven largest rivers is completely useless, while one fourth of our citizens do not have access to clean drinking water."

Speaking of the severe deteriorating China's environment, Mr Pan further added, "One third of the urban population is breathing polluted air, and less than 20 percent of the trash in cities is treated and processed in an environmentally sustainable manner. Finally, five of the ten most polluted cities worldwide are in China. In Bejing alone, 70 to 80 percent of all deadly cancer cases are related to the environment. Lung cancer has emerged as the No. 1 cause of death. Even now, the western regions of China and the country's ecologically stressed regions can no longer support the people already living there. In the future, we will need to resettle 186 million residents from 22 provinces and cities. However, the other provinces and cities can only absorb some 33 million people. That means China will have more than 150 million ecological migrants, or, if you like, environmental refugees."

The desert area of the Tibetan Plateau had increased by 8.3% over the past three decades, said a Xinhuanet report of Feb 16, citing a remote sensing survey launched jointly by the China Aero Geophysical Survey and Remote Sensing Center for Land and Resources (AGRS), Jilin University, Chinese Academy of Geological Survey Academy from 2003. The desert expansion is believed to have also led to the shrinking of grassland on Tibetan Plateau from 57,814sq km in the 1970s to 43,742sq km in 2002. The Tibetan Plateau has also been receiving less rainfall due to global warming and environmental degeneration. Experts also blame increased human activities for the environmental changes. Perhaps it's a wake up call for the Chinese government to do something about the unchecked influx of Chinese immigrants in Tibet.

Rural China's woes have contributed to a "floating population," officially tallied at 80 to 130 million people, who have left their rural homes in search of work in cities. The tipping point came in 1998 when Yangtse watershed reforestation project and others, affected over 350 million peasants. All this made us wonder whether the Chinese have not so much been creating an economic superpower as committing ecological suicide.

While on the subject of economic bubbles and collapsing systems, it might be noted that on June 4, 2004, the BBC reported on the growing scale of protests and demonstrations in China, "The Ministry of Public Security says last year there were more than 58,000 "mass incidents"- the term they use to describe public protests- involving three million people: that is an increase of almost 15 percent over the year before". The report also mentions that the protesters were largely peasants and workers. Over 200 million peasants left villages

for cities in the last 20 years, 25 million Chinese workers are in regular contact with life-threatening toxic dust, the progress has come with a risks. World Bank report spells out China has some of the worst soil erosion in the world.

China continues to rely on coal for 75% of its energy, spewing out some 19 million tons of sulfur dioxide a year contributing to acid rain, Barely 340 monitored Chinese cities breathe air that meets national air quality. Indoor air pollution from coal burning takes more than 700,000 lives a year; respiratory diseases cause nearly a quarter of all deaths in the countryside. A Beijinger said, " What good is the money if you can't breathe the air?", Two-third of the major cities are now seriously short of pure drinking water and as many as 700 million people drink water contaminated with human and animal waste at levels that don't come close to the government's minimum standard. Most of the 20 billion tons of raw sewage produced in the cities each year-only 10% of which is treated is dumped straight into rivers and lakes. According to the World Bank, 16 of the 20 most polluted cities in the world are in China. They also said that more than 70% of China's rivers and lakes were polluted. If things continue the same way, within three decades, China could overtake US as the world's largest source of Greenhouse gases associated with global warming.

The Vice Minister for Water Resources, Zhai Haohui, told a symposium on water management that the provision of clean drinking water should be a priority. This is yet another sign that China is struggling to deal with the impact of its breakneck economic development. China's waterways are dying, and its rivers are running black from industrial effluent and untreated sewage. The China Daily newspaper said that about two million people had suffered diseases caused by drinking water with high arsenic content, including cancer. Yet in one recent survey, 95% of the samples tested were polluted, some with sewage. An official from the environmental watchdog openly blamed the crisis on improper policies and poor government administration. The current leadership has stressed the need to conserve the environment, but these latest figures show just how much damage has already been done.

The World Bank estimates that air and water pollution cost China US$ 54 billion per year, or about eight percent of GDP. The World Bank further estimates that, every year, just the air pollution in excess of China's own air quality standards results in 6.8 million emergency room visits, 346,000 hospital admissions, and 178,000 premature deaths. In addition, air pollution causes some 7.4 million work-years to be lost annually. The numbers here are so uniformly large that they become a bit numbing.

Mark Hertsgaard, in his book, "Blue Planet, Red Sky," predicts that the world's most populous country could single-handedly wreck the global environment . " China can single-handedly guarantee that climate change, ozone depletion and other deadly hazards become a reality for people the world over", Mr Hartsgaard said.

4 . Unemployment, Poverty, and Social Unrest ...

The White paper outrageously asserts, " government considers the safety of the people above everything else and has taken a series of measures to enhance production safety and check the occurrence of all sorts of accidents...accidents in coal mines dropped by 15.6%, and that of death by 7.8%. to tackle the problem of industrial hazards ".

But the cost in Human lives is anything but low. Thousands of miners die in China's coalmines every year. The Government put the number at 6434 but labor and human rights groups say the true count could be as high as 20,000. Over 80% of coal-mining deaths in the entire world happen in China. The high rate of coal mining accidents highlighted serious enforcement problems in that sector. An October gas explosion in a Henan mine reportedly killed 147 miners. In November, 166 miners were killed in a single accident at a state-owned mine in Shaanxi Province, sparking reportedly violent protests by relatives of miners. In April, following the blowout of a natural gas well, over 243 people were killed and 4,000 injured. Yet today, China is the world's largest coal producer, increasing output each year to feed its rapidly growing economy.

The problem is that faithfully implementing China's environmental laws would mean closing thousands of factories and throwing tens of millions of people out of work. But the Party's tattered legitimacy might not survive that. The transition to a private market free-for-all has caused much more social unrest than most outsiders realize, including numerous riots in recent months. A government scientist in Chongqing rightly said, "It is never too late to learn, but it is very late."

The unemployment in China has continuously worsened, making the gap between the rich and the poor even greater. The Asian Developing Bank estimated that the surplus labor forces are about 200 million in the countryside of mainland. Based on this, the overall jobless rate should be 34.3% in China. The consequent social problem is severe and potentially a ticking bomb. Even the Development Research Center at the State Council for the Communist China has issued a warning that the unemployment rate in the urban areas has been climbing, from the current 10% towards probably 15% in the near future.

The White Paper quoted, " The Chinese government continues to take effective measures to help the rural poor shake off poverty...a basic task to realize, safeguard and develop farmers' material interests and protect their rights and interests ".

Nevertheless, Farmers remain the poorest and marginalized. Peasants are ill treated in many ways. They are discriminated against in education, political representation, social security and welfare, etc. For example, in 1998, in the Ninth National People's, peasants represented only 8% of its delegates from an agrarian population of 70% of the total. Peasants do not have social security, and even they pay higher prices for electricity and phone services.

Moreover, the number of people living in poverty in the urban areas has reached 37 million, about 12% of all the urban population. With its entry into the World Trade Organization (WTO), China will be facing still more pressure. China's Minister of Labor and Social Security, Zhang Zuoyi, admits that the unemployment peak may come at any time before 2005. According to the research by the World Bank, the Chinese government needs to create more than 100 million job positions in ten years to solve the demand from suspended workers, immigrants, and the new labor-seeking population.

The rich-poor gap in China is very apparent to any observer. The disparities between the urban and the rural, the coast and the inland, farming and non-farming constitute two distinct, but hard to bridge, identities in the Chinese economy. Due to exceedingly high Geni Index, the famous economist, Professor Li Yining from the Beijing University, has even proposed separating the urban and the rural components for the index calculation. This is really unthinkable, because the Geni index is intended to measure such unevenness or disparity. If one has to propose to separate the high-income and the low-income for computation, this means closing the gap between the rich and the poor is just too formidable.

Despite the fact that workers lack the legal right to strike, there has been a growing wave of strikes over layoffs, dangerous working conditions, or unpaid wages, benefits, or unemployment stipends. The reaction of local officials has been mixed, with strike leaders often arrested, while other strikers are given partial concessions. Over the past few years, even the numbers of urban protests in China have risen dramatically, and according to police reports, they are ever larger and better organized.

The White Paper states, " Employees' right to participate in and organize trade unions has been further exercised and developed. The Chinese government attaches great importance to the protection of laborers' rights. The state has adopted many measures to promote employment and reemployment, including reemployment aid, strengthened control of unemployment and regulation over staff cuts by enterprises.

"China's poisoned workers fight back" an article by Tony in BBC News, 10 th march 2005 stated, "for the first time in a decade, factory owners in the southern province of Guangdong are finding themselves with a labour shortage of up to two million workers. But their lawyer Zhou Litai, a celebrated champion of Chinese workers' rights, says it is a problem that is all too common. "The rights of workers are often violated like this," he said, speaking on the phone from his office in Chongqing. "That includes work-related health problems, and a failure of workplace safety. They don't buy health insurance for the workers and there are lots of industrial accidents. All these problems happen very frequently," he said. The courts do not show much sympathy either. Although China has very strict laws about the obligations of employers to protect their workers in dangerous environments, more than 100,000 people a year are estimated

to die in work related accidents. Very few cases are brought against employers successfully.

Chinese workers have yet to reap the benefits of the country's economic development. Employers routinely ignore minimum wage requirements and fail to implement required health and safety measures. Many former employees of state-owned enterprises lost their pensions when their companies were privatized or went bankrupt. Workers are limited in their capacity to seek redress by the government's ban on independent trade unions. The only union permitted is the government-controlled All China Federation of Trade Unions.

In late October and early November 2004, major riots by tens of thousands of people roiled Henan and Sichuan provinces. The riots were widely separated geographically and the issues precipitating them were different, but the riots, and the state response to them, highlighted growing rural unrest and Chinese leaders' preoccupation with social stability. Leaders continue to isolate areas of discontent, and aim to prevent information about social problems from spreading.

The last annualized figure for labor protests that the Chinese State was willing to announce publicly was 100,000 for the year 1999. But a 2001 Internet report from the Ministry of Public Security disclosed that the numbers "began a rise like a violent wind" from 1997, the year of the Communist Party's 15 th Congress, which pressed for factory firings in the name of efficiency. The causes are unpaid wages and pensions; sudden and massive job terminations corrupt officials held responsible for the bankruptcy. Some 60 million state-owned enterprises (SOE) employees have been summarily sacked since the early 1990's as their factories failed-from the lack of the state of the art technology and equipment, poor management or embezzlement, hefty social welfare bills, or costly non-state plants in China.

So far, the regime has succeeded in maintaining overall stability through control of media, by buying off angry unemployed workers with temporary stipends and by suppressing and imprisoning those it cannot dissuade. But these temporary measures and when considered in tendem with the waves of peasant protest caused by arbitrary taxation, official corruption and wanton land confiscation, party leaders find themselves confronted with a deeply worrisome situation. For what the party now confronts is a political threat no longer made up of students and intellectuals, as in 1989, but of workers and peasants, paradoxically the very disenfranchised classes on which Mao Tsetung built his revolution and in whose name the CCP has ruled unilaterally for so long.

Corruption within the CCP is rampant; embezzlement and bribery are particularly serious problems. China was ranked 71 out of 146 countries surveyed in the 2004 Transparency International Corruption Perceptions Index. Corruption remained an endemic problem. According to the Auditor General, embezzlement and misuse of public funds affected 75 percent of commissions and ministries under the State Council and accounted for

approximately $170 million (RMB 1.4 billion) missing from the Central Government's 2003 budget. Transparency International continued to rank China among the worst countries in the world for bribery. Economists estimated that the cost of corruption might exceed 14 percent of gross domestic product.

Today we see that the government's attempts to solve the ever ballooning problems of corruption, local administrative highhandedness bordering on feudalism, unemployment, environmental devastation, economic disparities of all kinds and plethora of other serious problems go very little beyond announcements of policies and only symbolic redressals. They are only propaganda ploys devoid of substantive content of real implementation.

The white paper deals in length with the amount of monetary investments and subsidies that the central government has pumped into the much-heralded Western Development Scheme. " Increased financial input from the state has brought about rapid economic and social development in ethnic-minority areas and continuously improved the living standard of ethnic minority peoples. To accelerate the development of China's western regions and ethnic autonomous areas, the Chinese government launched a grand strategy for the development of western China in 2000".

But China's highly touted "Great Western Development Program" is seen as a "Great Western rip-off" by the uighur and Tibetans in the Western China. Five years after it was launched in late 1999 with great fanfare, two-thirds of the nation's population living in absolute poverty are in the west, while per capita gross domestic product in the region is only 40 percent of what it is along the eastern sea-board. Wide scale extraction of oil, gas and mineral resources in Tibet, Xinjiang and Inner Mongolia is fueling the eastern seaboard's economic boom. "The plan sounds nice, but they (government officials) are always saying nice things and things aren't getting that much better for us," said the Uighur handicraft maker Amin.

The White Paper also boast of tax exemptions to the peasants by the Central Committee of the CPC and the State Council promulgated, in the form of document No. 1 , stating, " intensify efforts in implementing the policies of cancellation of special agricultural product tax, reduction of agricultural tax, providing direct subsidies... "people's right to subsistence and development were improved considerably ...sparing no pains to increase farmers' incomes and improve their lives...relieving of tax burdens, which totaled 30.1 billion yuan."

According to a study by Social Anthropologist and Tibetologist Dr Melyvn Goldstein in Asia Survey(sep/oct 2003), noted that taxes and fees had increased for rural Tibetans, and that the prices of manufactured foods and other essential products such as fertilizers, sugar, tea, cooking oil and rice had seen inflationary rises ranging from 107 % to 400% over periods of 1984-2000. The study was also said

to show that the price of barley (the major produce of Tibetan farmers) had risen only 56% around the same period. The study also shows that " all individuals 18 to 60 years of age are required to provide 20 days of free labor annually. It said that currently Tibetan farmers and livestock producers face buyer cartels, heavy taxation and extra budgetary charges, and lack access to micro-finance enabling them to buy trucks. It said they also do not have an effective agricultural education extension service to bring scientific advances to the farmers.

5 . Death Penalty..

The White Paper, while avoiding the controversial subject of death penalty, skillfully delve on Government's effort to build "model units for strengthening the enforcement of surveillance and legal supervision, and for guaranteeing smooth criminal proceedings and the legal rights and interests of detainees".

The official Xinhua newsagency reported China's Premier Wen Jiabao pledging earlier this year that Beijing would improve its justice system so the death penalty would be given "carefully and fairly",. Sarah Green, a spokeswoman for Amnesty in London, welcomed the announcement, but said the group wanted action, not words.

In a report, "The death penalty worldwide: developments in 2004" by Amnesty international, "China Extensively and indiscriminately used death penalty as a result of political interference. The authorities continue to keep national statistics on death sentences and executions secret. By the end of the year, with the limited records available it was estimated that nearly 4,000 people were executed worldwide in 2004 - the most in nearly a decade. Of this China carried out more executions than all other countries combined - at least 3,400. The global rise in executions was "alarming", said Amnesty's UK director Kate Allen, who called the figures from China "genuinely frightening.

China executes, on an average, 40 people every week, according to an Amnesty International Report, and throughout the 1990s condemned more of its citizens to death each year than the rest of the world put together. From 1990 to 1999, Amnesty recorded 27,599 death sentences and 18,194 executions in China. " However the actual figures are likely to be far more than this, as only a fraction are reported and the Chinese Government regards the total figure as a state secret". In March 2004, a delegate at the China's National People's Congress asserted that "nearly 10,000" cases per year "result in immediate execution." The statement sparked calls for reform, including returning the power to issue death sentences from provincial courts to the Supreme People's Court (SPC) and eliminating the death penalty for economic and other nonviolent crimes. But death is announced unabatedly and indiscriminately in China.

6. Health and Aids..

With similar élan, The White Paper mentioned that China also attached great importance to the health conditions of its people, " In 2004, China had 296,000 health care institutions, 3,047,000 hospital and clinic beds, 4,390,000 medical personnel, and 3,586 disease prevention and control centers (including anti-epidemic stations) with 160,000 medical personnel. Moreover, there were 1,279 health care supervision and examination institutions with 26,000 medical personnel, and 42,000 township clinics".

The real cannot be further from the truth. Terence Neff, an American pediatrician found his team of eight medical personal to be the very first to provide medical treatment in the life of the people of Shangri-La County or Gyalthang of Yunnan province. "These people were so hungry for the medical care. It was so badly needed that, and they referred to western medical practices as magical", Sydney Herald (ID) Jan 20 quoted Neff as saying. "If you don't have money, you don't get any medical care in China. We saw a lot of iodine deficiency, cataracts and arthritis", Neff was further quoted as saying. The team of eight medical professionals was supported by the Friends Church, Coeur d' Alene, Idaho.

China said that a new medical regulations had been implemented in the rural areas of Tibet under which those who pay 20-30 yuan medical insurance each year could apply for 60 percent of reimbursement for their hospital bills. It said that currently 85 % of the rural residents, or 1.94 million farmers and herdsmen, had registered in this new medical insurance. "But in many cases, the question is the absence or gross inadequacy of medical facilities themselves, rendering such insurance quite meaningless. It is like buying discount coupons to stop in an empty or very poorly stocked shop" a report said.

Despite China's assertion of improvement in overall health, it proved a major headache. According to the 2000 Census, the infant mortality rate was 28.4 per 1,000. According to UNICEF statistics, the mortality rate for children under 5 years of age was 37 per 1,000 live births. More than 150,000 homeless "street children" lived in cities, according to state-run media.

The White Paper also explain in length China's medical campaign, " The State Council has issued the 'Notice on Enhancing the Prevention and Treatment of AIDS' A working committee on the prevention and treatment of AIDS was set up, and a national conference on the prevention and treatment of AIDS was held. The state has provided free anti-AIDS medicine to patients among farmers and to other patients in straitened circumstances".

China faces what could be one of the largest AIDS epidemics in the world. According to official statistics, 840,000 men, women, and children are living with HIV/AIDS, but the real number could be much higher. Many Chinese citizens lack basic information about AIDS, and some AIDS activists face state harassment and detention.

The authorities continued to resist calls from non-governmental organizations (NGOs) and others to conduct an independent inquiry into the operation of state-sanctioned blood collection stations in Henan and other central provinces which reportedly resulted in up to one million HIV infections. Vaguely defined "state secrets" legislation continued to be used to detain those suspected of publicizing statistics about the spread of the disease. Medical specialists and others who attempted to raise public awareness of the issue were arrested or intimidated.

Dr. David Ho, in an article, "The Aids Bombshell" said, "The Aids epidemic is a real worry for China, although its magnitude is still unclear. The Chinese put the official total of Aids cases at about a million. The reality is, the data are so poor that it could be half a million or two millions. UNAIDS has called China's epidemic the 'titanic peril' because it could blow up to ten or twenty million cases by the end of this decade. To me, that's frightening... As they reflected, Chinese officials realized that they had serious health-care problems. That includes HIV/ AIDS. It includes a healthcare infrastructure that has broken down, particularly in the rural areas, where 800 million people live. Most people don't have insurance, and the costs of health care are rising. If the Aids epidemic spreads, it could overwhelm the health-care system. A lot of work needs to be done. Prevention efforts should be expanded. But there's a window of only a few years to get that work done before the epidemic growth curve takes off exponentially. A balance must be struck between prevention and treatment. Lately the emphasis has been on treatment. It's like robbing Peter to pay Paul. China has to realize that Aids is a threat to its well-being and prosperity in the long term. Greater resources must be committed to the effort".

7 . Human Rights- a farce

" The Communist Party of China (CPC) adopted the "Decision on Strengthening the Party's Governing Capability," which stresses that state power should be exercised in a scientific and democratic manner within the framework of the law, and that human rights should be respected and protected", says the paper.

Despite the flowery worded laws, no attempt was made to introduce the fundamental legal and institutional reforms necessary to bring an end to serious human rights violations. Tens of thousands of people continued to be detained or imprisoned in violation of their rights to freedom of expression and association. No country in the world could be indicted with such a wide variety of horrendous and bizarre human rights abuses as China. Protection of human rights was written into China's state constitution in the recent years, but these are simply dismissed as a tactical move aimed at consolidating communist rule and maintaining enforced social stability. Moreover, China's oblique legal system also made the constitution impossible to enforce.

The UN Working Group on Arbitrary Detention which visited the People's Republic of China from 18 to 30 September 2004, said that

China was lagging in bringing human rights laws into line with international agreements and suggested this left the door open for continued abuse of dissenters. The report further regretted that "at this stage, the four recommendations formulated in its 1997 report have not yet been implemented. Namely, the provision which stipulates that everyone shall not be consider guilty until convicted has not been amended to clearly stipulate the presumption of innocence until proven guilty; no definition for the term in criminal law "endangering national security" has been given, hence the application of criminal law provisions using this unduly broad notion may invariably give rise to arbitrariness; no legislative measures have been taken to ensure a clear-cut exception from criminal responsibility for those peacefully exercising their rights under the Universal Declaration of Human Rights; and finally, no real judicial control is exercised within the procedure to commit someone to re-education through labour."

During the visit, the UNWGAD urged China to bring national laws into compliance with international human rights standards. Later, UNWGAD cut short its visit to Tibet's Drapchi prison after the China refused requests to meet with prisoners who were severely injured during and after the 1997 visit.

Despite reluctant and lackadaisical efforts to improve the rule of law, China's legal system itself remains a major source of rights violations. Many laws are vaguely worded, inviting politically motivated application by prosecutors and judges. The judiciary lacks independence: Party and government officials routinely intervene at every level of the judicial system in favor of friends and allies. Trial procedures favor the prosecution, and despite the public prosecution of a large number of judges, corruption remains a widespread problem. The criminal justice system relies heavily on confessions for evidence, creating institutional pressures on the police to extort confessions through beatings and torture. According to Chinese experts, legal aid services meet only one-quarter of the demand nationwide. Defense lawyers may face disbarment and imprisonment for advocating their clients' rights too vigorously.

The White Paper emphasis, " In 2004, the State Council promulgated China's first comprehensive administrative regulation on religious matters - "Regulations on Religious Affairs." It clearly defines the rights of religious groups and adherents with regards to religious activities, establishment of religious colleges and schools, publishing of religious books and periodicals, management of religious properties and foreign religious exchanges ".

However, there is a little respect in China for religious freedom, though it is recognized in the constitution. All religious groups and spiritual movements must register with the government, which judges the legitimacy of religious activity. The government also monitors the activities of the official religions (Buddhism, Taoism, Islam, Protestantism, and Catholicism). It targets leaders and the adherents

of various religious groups for harassment, interrogation, detention, abuse, and prosecution and destroys or seizes unregistered places of worship. The extent to which such actions are taken or rules are enforced, though, varies widely by region. Religious controls remain particularly tight in Tibet, Xinjiang, Inner Mongolia and other areas.

The communist Party of China keeps playing two-hand tactics with the Chinese people and the international community as a whole. On the one hand, it makes domestic laws and international commitments to protect human rights including the "freedom of religious faith," on the other hand; it still promulgates secret documents depriving people of basic human rights such as religious freedom. Although the Chinese constitution guarantees freedom of religion, in the actual practice every religious groups has to undergo an onerous registration process and their activities are rigorously monitored Any group seen as attempting to move away from the strict and intrusive controls the Chinese Government exercises is immediately charged with criminal activities or illegal gatherings. This invariably results in police action, with routine physical abuse, torture and long-term imprisonment of religious leaders and practitioners.

Freedom of assembly and association is severely restricted. Protests against political leaders or the political system in general are banned, and the constitution stipulates that assemblies may not challenge, "Party leadership" or go against the "interests of the State." Security forces are known to use excessive force against demonstrators. All nongovernmental organizations must be registered with and approved by the government. Though the formation of political parties is not specifically discussed in any laws or regulations, the one opposition party that has formed, the China Democrat Party, has been targeted and suppressed by the government and has no real political power. Independent trade unions are illegal, and enforcement of labor laws is poor. All unions must belong to the state-controlled All China Federation of Trade Unions, and several independent labor activists have been jailed for their advocacy efforts.

Despite some recent criminal procedure reforms, trials-which in any case are often mere sentence hearings-are often closed; few criminal defendants have access to counsel. Officials often subject suspects to "severe psychological pressure" to confess, and coerced confessions are frequently admitted as evidence. Many political prisoners and ordinary alleged criminals lack trials altogether, detained instead by bureaucratic fiat in "re-education through labor" camps. The U.S. State Department claimed that some 250,000 people were serving sentences in these camps in 2003. Endemic corruption further exacerbates the lack of due process in the judicial system. And judicial conditions are worst in capital punishment cases. Sixty-five crimes carry the death penalty, and perpetrators are often executed within days of their arrest. Although security forces are generally under civilian control, serious human rights abuses are widespread. These include extra-judicial and politically motivated killings,

torture, physical abuse of prisoners, coercion, arbitrary arrest and detention, and lengthy incommunicado detention.

For example, police can detain a person for up to 37 days before releasing or formally arresting him. Arrests to thwart political dissent are frequent. Moreover, the government does not permit independent observation of prisons or of reeducation-through-labor camps.

Article 19 of the Universal Declaration of Human Rights and Article 19 of the International Convent of Civil and Political Rights include the right to see, receive and impart information and ideas as part of the right to freedom of expression.

8 . Freedom of information...

The White Paper too claimed , "Citizens' freedom of information, of speech and of the press is protected by law... Protection of citizens' rights to information, supervision and participation in public affairs were further promoted".

But China's media are tightly controlled by the country's leadership. Beijing also attempts to restrict access to foreign news providers by jamming shortwave radio broadcasts, including those of the BBC, and blocking access to web sites. A Paris-based media rights group, Reporters Without Borders reported in 2004 that China was the world's "biggest prison for cyber-dissidents".

The New York Times reported on a study by Harvard Law School researchers, that China had the most extensive and effective Internet censorship in the world. It regularly denies local users access to 19,000 websites that the government deems threatening. The study, which tested access from multiple points in China over six months, found that Beijing blocked thousands of the most popular news, political and religious sites, along with selected entertainment and educational destinations. Those that do not comply are shut down. In 2004, more than 47,000 net cafes were shut for 'breaking' these laws

A recent BBC report from Beijing stated that China was expanding its censorship controls to cover text messages sent using mobile phones. New regulations have been issued to allow mobile phone companies to police and filter messages.

Press freedom is severely limited in China. The government bars the media from criticizing senior CCP leaders or their policies, challenging CCP ideology, and discussing "sensitive topics"-in particular, constitutional reform, political reform, and reconsideration of the 1989 Tiananmen movement. Journalists violating these restrictions may be harassed, detained, and/or jailed. The government owns all television and radio stations and most print media outlets, and uses these organs to promote its ideology.

According to the U.S. State Department's Human Rights Report, "All media employees were under explicit, public orders to follow CCP directives and 'guide public opinion' as directed by political authorities. Because of this, most journalists practice a high degree of self-censorship. The government also directly censors both the domestic and foreign media. The government promotes use of the Internet, but regulates access, monitors use, and restricts and regulates content. China's Internet control system employed some 30,000 people and was the world's largest such system. Authorities target and punish Internet publishers and essayists far more frequently than journalists affiliated with more conventional media", the report added.

In October 2004, China also banned all reporting on rural land seizures by the government. In September, New York Times research assistant and author Zhao Yan was arrested on charges of passing state secrets to foreigners, apparently for his work uncovering leadership changes in the Communist Party. In early 2004, authorities banned a best-selling non-fiction book, 'Investigation of Chinese Peasants', which documented cases of official corruption, excessive taxation, and police brutality in rural Anhui province. Numerous newspapers tested the limits of the possible in 2004, and some came under attack. Staff of the parent group of the Southern Metropolis Daily received long prison sentences on charges of corruption; the former editor-in-chief was fired. The charges were widely viewed as politically motivated, as the newspaper had been the first to report on several stories of national significance

" Women's equal rights and interests in political, economic and social spheres are being gradually realized along with social development" proclaims the White Paper .

Reality shows that women continue to be underrepresented in China's political leadership and in senior positions in business. Chinese women reportedly face serious discrimination in education and employment and are far likelier than men to be laid off when state firms are downsized or privatized. Despite government crackdowns, trafficking in women and children for marriage, to provide sons, and for prostitution remains a serious problem. However, women still held few positions of significant influence at the highest rungs of the Party or government structure. There was one woman on the 24-member Politburo; she concurrently held the only ministerial post (out of 28) occupied by a woman.

The All China Women's Federation reported that 47 percent of laid-off workers were women, a percentage significantly higher than their representation in the labor force. Many employers preferred to hire men to avoid the expense of maternity leave and childcare, and some even lowered the effective retirement age for female workers to 40 years of age (the official retirement age for men was 60 years and for women 55 years).

According to expert estimates, there were 1.7 to 5 million commercial sex workers in the country. The increased commercialization of sex and

related trafficking in women trapped thousands of women in a cycle of crime and exploitation and left them vulnerable to disease and abuse. According to the official Xinhua News Agency, one in five massage parlors in the country was involved in prostitution, with the percentage higher in cities. A 2004 Guangdong Province survey found that 74.2 percent of massage parlor workers were involved in prostitution.

"China fears bachelor future", by Louisa Lim speaks of China facing a demographic crisis. China was found to be heading towards becoming a nation of bachelors, with official statistics predicting as many as 40 million single men by 2020. The shortage of women is due to a traditional preference for sons, combined with the effects of China's strict birth control policies. Ms Louisa estimates that 70% of the newborns in her hospital are male. And statistics indicate that as many as two million extra boys are born every year nationwide. These are men who will not find wives, and Chinese officials have warned that this gender imbalance could lead to an increase in prostitution, sex crimes and wife-buying

" China attaches great importance to the development of services for the disabled and protect their rights ", so claim the Paper. In 2004, an amendment of the "Law on Protection of the Disabled" was started, aiming to further improve the legal guarantee for the rights and interests of the disabled and for the development of undertakings relating to the disabled. But the Government statistics itself showed that almost one quarter of the approximately 60 million persons with disabilities lived in extreme poverty.

Conclusion:

The "White Paper" entitled, "China's Progress in Human Rights in 2004" released by Chinese Communist Party on 13 th of April, as always, fail to convince the world in general and the people of China in particular, that all is well in China as clarified and vindicated by these factual truths.

In 2004, as it had in the past, China did not permit independent domestic NGOs to monitor or to comment on human rights conditions. The Government generally did not permit independent monitoring of prisons or reeducation-through-labor camps, and prisoners remained inaccessible to most international human rights organizations. It was difficult to establish an NGO and the Government tended to be suspicious of independent organizations; most existing NGOs were quasi-governmental in nature and were closely controlled by government. Although China established the China Society for Human Rights, but the mandate of the so-called "nongovernmental" organization was not to monitor human rights conditions, but to defend the Government's views and human rights record.

In 2004 China's cooperation with U.N. human rights mechanisms remained sore. After almost a decade of discussion, China extended an

invitation to the U.N. special rapporteur on torture, but two weeks before the June 2004 visit was to take place, the government postponed it indefinitely. The prime reason cited for the failure of the visit was the reluctance on the part of China to agree to the standard U.N. terms for such a visit, which include unannounced visits to prisons and confidential interviews with prisoners.

In 2004 China denied the U.N. High Commissioner for Refugees (UNHCR) permission to operate along its border with North Korea and deported several thousand North Koreans, many of whom faced persecution and some of whom may have been executed upon their return, as provided in North Korean law. Likewise during an annual meeting of the Commission on Human Rights, China again blocked consideration of a resolution condemning its human rights record by calling for a "no-action" motion.

In December 2004, the Government postponed a planned seminar by the Organization for Economic Cooperation on Socially Responsible Investment, which resulted in the cancellation of a visit by the OECD's Trade Union Advisory Council to discuss labor issues. By the end of 2004, China had not announced any progress in talks with the International Committee of the Red Cross (ICRC) on an agreement for ICRC access to prisons, although there were several rounds of consultations between the ICRC and the Government about allowing the ICRC to open an office in Beijing.

It is the biggest irony of the new millennium that the word 'human rights', the birthright of every human being, was constitutionally introduced to 1.3 billion people of the world only in the year 2004 and that too after decades of international pressure. It is but simple logic that when the word 'human rights' took such a long time to get on paper how many more centuries will it take to put the word into genuine practice.

Perhaps the most substantial fact about China, which directly refutes all their claims as well as future claims of progress in human rights is that the Government still maintains that there were 'legitimate, differing approaches to human rights based on each country's particular history, culture, social situation, and level of economic development'. A conformist attitude which means that China doesn't deem it important as well as necessary to submit to internationally accepted norms and standards of human rights and that China will continue to practice its own authoritarian benchmark of communist dictatorial rule and that 1.3 billion human beings will continue to feel insecure in their own homes and suffer under the Communist Party of China.

All in all, China, despite the heightened diplomatic and economic relations to boost and assert its undeserving position in the global stage, must, sooner or later, heed to the call of inevitable change and realize that realities inside China cannot be shrouded with a pack of "White lies" from the world, not that easy...

I don't know about the KCBS pattern, but from experience it always sounds better east of the bay area than KGO. This is especially true in central Nevada, which is due east of the bay area. You can hear KCBS better than KGO in Yosemite as well.

389. Re: Some notes on using a PCR1000 on SW

yea sure
mydigcam wrote:
> The box the PCR1000 comes in is better than the PCR1000...

If you still have your PCR1000, keep the box and send me the
radio.

For some specialised tasks the PCR1000 may have some utility.
I have, and I am continueing to, developed lists of frequencies
for special events.
T-storm/tornado/flooding, winter snow events, eathquake,
Madison county nerve agent leak, aircraft crash etc.
Most have freqs in the VHF/UHF range, but some are down in HF.

While any radio with a computer control would be useable for this
idea, I happen to have a PCR1000. It's wide range is usefull for
this project.

Would I spend $500 on a new PCR1000?
No F-ing way. Please note my comment:
"With these outboard additions the PCR1000 becomes a much usefull
HF/LF receiver. Not in the league of a "real" SW receiver, but
much better then it comes out of the box. "

I would love to have an AOR AR7030+. The PC control is much
better. The noise floor rivals a R390 and it is a very good
radio. A friend loaned me hers AOR while she finishes graduation
and sells the family farm. I guess I will have it a month or
so. And it is great! I would be tempted to sell my left nu, er,
kidney. Even in my fairly high RF wastland, it is GREAT!

PCR1000, odd toy, but I will still accept yours for storage.
No charge either.

Now you know why I am up at 3:00EDT(8:00UTC)

Terry

Leonard Pitts, Tribune Media Services, claims in his column today that "Anti-gay laws reveal inhumanity" so I suppose he'd accuse God of being INhuman! NO, I did NOT read his crap!

When black columnists take such stands it seems to me they are promoting the increase of homosexuality among all people but mostly among blacks who look up to and respect them. (I do neither! I learned a long time ago that giving any person a high sounding title or dressing them in king's clothes didn't make them noble.) ... Then we wonder why so many of them die at very early ages. All you have to read the obituaries. Of course, not all of them die from STD related causes, but many of them do. ... and not many obituaries tell the cause of death -- BUT THEY'RE STILL DEAD!

After the years of constant flame wars in this NG,
I was kind of shocked to read that Cuhulin has been
bumped for violating his TOS.

Isn't this a first?

Not that I am complaining, I just didn't think I could
live long enough to see it happen.

Has it ever happened before?

I lurk in several moderated groups where the managers
keep the SN under control, but I thought the REC groups
where open country.

Terry

Strange things happen. A certain fellow in Louisville called my ISP...

In an interesting conference call I set them straight.

It was fun, as they didn't want me to own the entire company.

If, he is gone it is because he lost his ISP (WebTV). You can't block or
"kick" someone off a reg newsgroup.

If, he is gone it was because his post were forwarded to the ISP.

He maybe just lurking and seeing what is being said.

Forget Gulf War syndrome, deadly vaccines and the alleged crash at the Pentagon on 9/11. Joyce and Dave have uncovered the biggest story of the new millennium:

RFI kills!

Yes, the SWL's nemesis, RF interference, AKA "Electrical Pollution" from sources such as dimmer switches, computers, touch lamps and such, is the cause of all kinds of health problems.

Terrifying, yet there is Good News!

Today's Power Hour guest is not only telling -- but also selling!! He's selling powerline RF filters so we all might have long and happy lives!

Well, I'm not going to keep this under my hat. No siree!! It's my altruistic duty to share the information with all my neighbors, even the SOBs whom I would prefer dead -- right now!

A quote from today's guest's website:

"The high frequencies on home wiring can cause Radiofrequency Sickness. The symptoms of which can include: sleeplessness or disturbed sleep, fever, rash, nausea, inability to concentrate, thinking in a fog, short-term memory problems, sore joints (particularly hip joints), irritable bowel syndrome, miscarriage, and birth defects."

Yikes! Please, everyone, filter your power BEFORE IT'S TOO LATE!!

...take the 10 second survey and find out how racist
xian identity bigots are all over short-wave radio and
the internet.

....mainly because they are ignorant SOB's,
they usually don't have "a-pot-to-piss-in-or-a-window-to
-throw-it-out-of", and finally 98% of the US population
sees them as kooks screwballs, plus the US Govt. and
OHS sees C.I. as possible al-Queda sympathizers too.
(bet U didn't know that eh folks!)

I for one hope OHS and the BATF locks them all up
in Guantanimo Bay and the FCC revokes the licenses
of all their kook short-wave radio shows which serves
only to incite domestic sedition and insurrection.

And these myths matter how? You are so disparate to find, "Reason to
hate the jews, #127, the khazar bullshit". Kind of like hating the
russians because some of them had asians in their past ancestry, a long
long time ago. Almost every area of the world was conquered or did the
conquering, and everytime, there is the dreaded, in your feeble mind,
some of that gol durn "race mixin".

>
> But guess what. Abraham had more than just Isaac, even though God told
> him that it was through Sarah that the world would be blessed. His

> nations.

You really believe this nonsense?? No wonder you buy into the
"identity" BS. It's an old fable, nothing more.

So, yes, more than the "twelve tribes" can lawfully and
> legally claim to be "sons of Abraham" -- The Arabs Can -- but I doubt
> seriously that the Khazars can and that is about 90% of what claims to
> be Jews in the nation of Israel today. They were "converts" to Judaism.

So what?? Just about every christian's, (or any other religion)
ancestors converted over too? People, even white cracker trash like
yourself, are almost never "purebreds", even less so as you go back in
time. People intermarry, and always have, and the genes get spread
around.

I'm actually half "cracker" myself. My mother's father's bunch have
lived in Kentucky for over 200 years. Of course, there is native
american in there too, and french, both at least a couple of times, and
then the other side is 100% Irish, a whole bunch of Ghallagers came over
in a couple of waves and then the Kelly's came over around 1890 or so.
My other side is Polish (catholic) and there's some from scotland and
france too, and a couple that possibly are from Newfoundland..

>
> Get the book. Read the book. Better still, read The Book, The Holy Bible!

I'll pass, I've read it more than enough to know what is really is, and
what it stands for..

> little book. Maybe they worked because she surely hooked a lot of
> "fish" with it!

Like Texe Marrs and his type have hooked you, swallowing the "jew
bait"?? LOL.

I love how some of you loons get all bent out of shape over not capping
the word "bible". It's a book, nothing more. It has some good ideas and
lessons in it, but it's full of errors and contradictions, too. Along
with all the recycled versions of older stories, that alone proves it's
not "the word of god", it's a book, written by men, and that's it.

>
> -----
>
> Additional: My spell checker even wanted to capitalize the word
> Christian but YOU are far to intelligent to do that! Aren't you? :-(

You notice I don't cap ANY religion, Al? That's on purpose. Sure, once
in a while I do it, when I'm sleepy or tired, but I don't think any of
them are really deserving of being capped. And if I was to "grade" the
behavior of the followers of the major religions, none would score too
high. Christians wouldn't be at the bottom, but they would be on the low
end of the curve..

Funny, my spell checker never wants to capitalize anything??

And one thing is for sure, I AM way smarter than you, but then again, so
are most 4th graders..;)

"Reverend" it was said to Peter in Matthew 26:73 that his speech made
him known -- even though he denied knowing his Lord and Master Jesus Christ.

YOUR speech makes YOU known! I'm betting you're more likely to be a
"sailor" or a back alley drunk than a minister of the Gospel of Jesus
Christ! :-)

Hmmm. Not sure that that means my radio is at fault. I flipped in the 20 dB attenuator and could still detect the peak splatter. Without the pad, it was sometimes strong enough to kick the meter off S0.

What do you mean by S10? The S-scale runs 0-9 and then decibels above S9. If your meter was pointing to a 10 next to S9, then that would be S9+10dB, not an especially strong signal. As each S-unit is nominally 6dB, that would be around 60-some dB above S0. If the splatter is 80dB below the carrier, you probably would not hear it. However, if your meter is pinned by the carrier, that means the carrier signal strength is greater than S9+40 or +60 dB (mine roofs at +40) and the splatter strength would move the meter and be very audible, provided there is not a much stronger station in the same spectrum as the splatter energy.

I'm looking to hear from somebody who receives the 9735kHz carrier at meter pinning strength to be certain it's the transmitter and not my receivers. All the evidence so far weighs heavily towards the trasnmitter.

Thanks for the report. Appreciate if you'd look again tonight.

Tom

422. Shortwave status? (and computers)

Newsgroup: rec.radio.shortwave
Date: 2005-05-04 16:44:56 UTC
From: nospam@geniegate.com
Message-ID: <Lucy1115225096141640xfb47bc@air.tunestar.net>
Source record: 21107

Hi Newsgroup,

How many folks listen to shortwave radio in the US? I have to wonder where shortwave is going, whats the appeal of SW station when there are millions of radio streams available?

Personally, I like listening to it but the only time I seem to be able to hear it is when I shut my computers off. ("Shielding" the computers would be a lost cause, just too many of them, with ethernet and all that..)

Anyone else have this problem? Will a shielded antenna line work? (I was thinking about maybe using my clothes line as an antenna)

I've got a DX-392 (Made by sangean under radioshack name) how does this compare with a table-top model? Would a table-top model get MW any better? (The DX-292 kind of sucks for MW reception)

I've got my eyes on some table top models, something I can hook up to a computer and/or the stereo, but I don't want to spend the $$, especially if it suffers the same problems as my DX-392. Computer noise, station fading in and out, (Gets LOUD then quiet and LOUD)

Also, are these shortwaves with remote controls really worth it? Since a station goes off air, often need to adjust 1Khz and a lot of other fiddling, seems like a good remote control would be nice. (obviously, something that handles the wavy lOuD-qUiEt problem as well as compensating for frequency shift automatically would be nicer)

There's some sort of regulator circuitry, as I measured 2.5 volts
across the lamp in mine. Neither battery was at that voltage.

Somebody here in the newsgroup posted about replacing the lamp
with an LED several months ago.

'cause Russia would have started WW III if we tried to put as much
of the US Air Force in Uzbekistan and Kyrgyzstan as we've got there now.

Without the sympathy gained from the Trade Center attack, we couldn't
get the forces in place to deal with Afghanistan.

Let the fun begin!

WASHINGTON - Sen. John F. Kerry tapped campaign funds for Red Sox tickets and to pay nearly $300 in overdue Boston parking tickets in March, records show.

Kerry's Senate campaign committee wrote a $287 check to the City of Boston Parking Clerk on March 31, 2005. The Bay State senator listed ``travel expense'' as the purpose for the expenditure.

Kerry leased a car for campaign-related travel in Massachusetts that was cited for about a half-dozen parking tickets in Boston.

Most of the tickets were issued in October and November 2003 and not paid until more than 15 months later in March 2005 after accruing penalty fees.

``They were leftover tickets we only found out about when we closed out the lease,'' Kerry spokeswoman Jenny Backus said. ``The car was used for the Senate campaign by staffers and volunteers.''

Kerry, meanwhile, used presidential campaign funds for a $3,150 tab for Boston Red Sox tickets in July when he threw out the first pitch at Fenway Park before the Democratic National Convention.

A Federal Election Commission spokesman said congressmen are entitled to pay for parking tickets and other expenses from their campaign funds as long as they were ``campaign-related.''

Other members of the Bay State congressional delegation also reported some novel spending this year.

U.S. Rep. Stephen Lynch (D-South Boston) spent $1,231 on makeup services during a two-week stretch in March, according to his most recent FEC report.

``Congresssman Lynch had a pretty intensive round of TV interviews due
to the baseball steroid hearings, the Big Dig hearings and his Iraq trip,''
Lynch spokesman Matt Ferraguto said.

It is not failing. It is very viable, but it is not the major factor in most
US markets that conservative talk is, mostly due tot he fact that in very
few markets is the programming on a competitive technical facility.

More than some like to admit. As bad as reception is sometimes it just
may be more dependable than broadband streaming when the net goes down.

> Personally, I like listening to it but the only time I seem to be able to hear

I have multiple radios. One is right by my computer and yes, I do have
to shut the computer down to get certain frequencies. 3210 was really
bad to get when the monitor/computer was on.

Station sync would help a little but not completely solve the problem.
Some days reception is bad all across the band. I'm in NC perhaps 500
miles from WWCR. When 9985 first comes on in the morning I can
generally get Australia, Canada and China better, but this is because of
the "skip zone" around the station.

> Also, are these shortwaves with remote controls really worth it? Since

I don't use a remote with any of mine. It depends on where and when you
use your radios as to the type to get. If you spend a lot of time in
the car you may want to look at a SW radio for the vehicle instead of
getting a table top. I have one of the older Sony auto radios that

includes SW and have enjoyed many hours of SWLing as I rode from place to place. Can't recall right now who carries these in the US, but someone does. I had to get one from overseas. Sony will probably still tell you they "don't make" an automobile radio with shortwave if they know you are contacting them from the US. Don't ask why! :-(

It is more "fun". Seems like streaming audio is just too easy. :-)

There is something fascinating about shortwave, but the lack of commercial stations
(6070 out of Canada is the only one I can think of) tells me that there just
aren't that many shortwave listeners. Government and religion seem to be about
the only thing on the dial. (or at least as far as I can get)

>I have multiple radios. One is right by my computer and yes, I do have
>to shut the computer down to get certain frequencies. 3210 was really

Do you have a shielded cable leading to an antenna? I can't get ANYTHING
(including MW) when the computer(s) are running. My computer(s) are old, I've
got wireless, hubs and several other "doo-dads" plugged in.

I'm hopeful that somehow, an outdoor antenna would solve this problem.

>getting a table top.

I was thinking of getting a dual 12v/120v unit, or, find some way of getting
the 6v required to power my portable. (If I ever wanted to use it in the car)

Can't quite see how one would mount it though. (Especially the antenna)

Isn't it rather awkward to operate all those dials while driving? That's the main
reason I figure SWL in a car is a bad idea for me.

Lets See - What Are Our Alternatives :
.
1. The Police Show up and watch and do nothing while
a Suspect Damages Property and/or Commits Injury to
their self or on Others.
.
2. The Police Spray the Suspect with Mace and Beat-Up
the Suspect with the Night Sticks to subdue the Suspect.
Guaranteed to cause Injury and possibly Death.
.
3. The Police pull out their Guns and Shoot the Suspect
and Injure or usually end-up Killing the Suspect.
.
4. The Police use a Tazer in an effort to not Injure or
Kill a Suspect. But the Suspect has an unknown medical
condition or may be "On Drugs" and thus by-accident has
some Injury or possibly may Die.
.
.
i vote for the use of the taser ~ RHF

Viable means capable (or possibility) of surviving, but not guaranteed to
thrive.

In the cab business, as with many others: "Money talks and BS walks." The
power brokers in many markets in the radio biz apparnetly don't care to jump
onto AA, even though there are abundant facilities available for the right
formatting fit. AA doesn't appear to fit in, and its revenue producing and
prior accounts payable history also speak for themselves.

action=show&section=area_los_angeles.xml&display=LOS+ANGELES&area=19

Let's see, what is the alternative?

1. Reevaluate the regulations stipulating the physical size that officers need to be to be on the force. When you have tiny women wielding guns and Tasers, you are going to have problems with the use of force where otherwise unnecessary. A woman officer here, using her firearm, shot a fleeing prisoner in the back, killing him. The prisoner's hands were cuffed behind him. Allegedly he was a Karate Expert, but was some distance away from her when she killed him. Of course her actions were deemed justifiable. This may have been a justifiable use for a Taser.

A 14 year old girl, refusing to yield to the demands of a Truancy Officer, crossing the street instead, was Tased and collapsed in the middle of the street, breaking her nose and placing her in risk of being struck by traffic. She lived. THIS IS NOT a justifiable use of Tasers. A 72 year old woman, attempting to visit a friend in a retirement home, discovered that the friend was not in her room. She remained in the Home, but the officials there objected and asked her to leave. She didn't, fearing that her friend was sick. As a woman officer approached the 72 year old woman, the 72 year old finally spotted her friend in the hallway, and started towards her. The officer stopped her, telling her that she was under arrest. When she continued towards her friend, she was Tased by the woman officer, collapsing to the floor.

Yeah RHF, these are real tough criminals deserving to be Tased. Fortunately they had the Tasers though, I can see them shooting a 72 year old with a firearm, or beating her with a night stick. LOL. You think in terms of the Serious Criminal, armed to the teeth, I think in terms of the people that are comparatively innocent, that these officers are abusing and shooting, especially with Tasers.

2. Educate officers that everyone other then their own "are not enemies". Unfortunately, you have obsessed on one aspect of my post, ignoring the remainder. Whether an officer shoots someone dead or electrocutes them is

a moot point, as dead people are still dead. Increasingly, the public is held at a much higher bar than the officers are, e.g. officers shoot an unarmed man in New York, striking him 18 times, out of 40 or so shots fired altogether. The autopsy showed that a shot went through the man's foot, from bottom to top, indicating that they were still shooting at him after he had fallen.

The man had no gun or weapon, committed no crime, had no police record, yet the shooting was held to be justifiable. If you shoot an intruder that is wielding a gun, you most likely will still be arrested, still miss work, still spend money on an attorney. The officers may have been suspended "with" pay, and don't need to pay for their defense.

It's unconscionable that police continue to escalate the use of force when no force is warranted. It's unconscionable that they try to provoke a situation where no situation exists.

Lastly, many occupations need to cope with dangerous situations, many more dangerous than what the police experience. If they feel overwhelmed, let them find new employment, let's not sacrifice our Rights for their conveniences.

Dr. Artaud

And AA is very viable. They already are at the affiliate mark that will
sustain them, albeit not with astounding, windfall profits.
>
> In the cab business, as with many others: "Money talks and BS walks." The
> power brokers in many markets in the radio biz apparnetly don't care to

Actually, there are very few facilities available for such a format. The
need is for a good signal, ownership which is not format-specific and
underperformance of the good signal. In other words, a strong AM that is not
owned by a company that, for example, only does Spanish, and a facility that
is not profitable now.

There are very few good, competitive AM signals in the US that are not
already utilized in a good manner and quite profitable. In fact, most
markets have only a couple of full market AM signals (DC has none, for
example) and these are uniformly committed to a profitable format.

What is left is the mid to lower tier of staitons, many of which are more
profitable in ethnic or religious programming than they could be, given the
signal-to-ratings expectations as a competitive talker.

> AA doesn't appear to fit in, and its revenue producing and
> prior accounts payable history also speak for themselves.

They had one bad two-month period at start up. they changed management and
got a more solid backer than the guys from Guam. They are on a firm
foundation now.

I had one for over a year, it had the optional remote keypad and the latest V1.15 software update. I thought it was a good receiver, sensitive, lots of bandwidth choices (34 I think), good audio, good agc, decent synchronous detector if properly used. The only reason I sold mine was to buy a Ten Tec RX-340. I actually ran them side by side for over a month before selling the 350D, not a whole lot of difference between the two receivers imho. I think the biggest gripe most owners have about it is the seemingly indifference by Ten Tec to updates on the software which has a couple of minor (IMHO) bugs.

With Republicans Like These, Who Needs Democrats?

Chuck Baldwin | May 4 2005

My friend Howard Phillips recently wrote a column outlining the philosophy and historical track record of the Republican Party since George W. Bush became President. Sad to say, even a cursory review of this record reveals the fact that the Republican Party in Washington, D.C., has become little more than a carbon
copy of the Democratic Party.

Phillips writes, "Sadly, the GOP's elected and appointed officials conform themselves almost without exception to that which Mr. Bush espouses, including:

a. an expanded Federal role in education,

b. record setting subsidies for pro-abortion and pro-homosexual organizations,

c. increased funding for the United Nations,

d. the attempted extension of Bill Clinton's assault weapons ban (blocked in Congress),

e. social Security benefits for illegal aliens who have returned to Mexico,

f. the ongoing reduction of the U.S. Navy (which now stands at 289 ships, compared to 600 under Ronald Reagan),

g. amnesty for illegal aliens,

h. nominees for the Federal judiciary and the Office of Attorney General who espouse the doctrine that Roe v. Wade is 'settled law',

i. support for Food and Drug Administration policies approving the abortion 'pill', RU-486, which has been used to kill scores of thousands of unborn children,

j. overturning Ronald Reagan's decision to withdraw from UNESCO,

k. increased funding for the National Endowment for the Arts,

l. multi-billion dollar support for the Federal Legal Services Corporation and its 25,000 left-wing legal activists,

m. murder-abetting assistance to the Communist government in Angola,

n. historically high multi-trillion dollar fiscal deficits and trade deficits,

o. a multi-trillion dollar Medicare entitlement program,

p. a $20 million 'New Freedom' program to evaluate the mental health of 53 million students in the government schools.

q. enactment of the McCain-Feingold campaign regulation law which criminalizes free speech,

r. support for the U.N. Law of the Sea Treaty (UNLOST) which President Reagan rejected,

s. endorsement of homosexual 'civil unions',

t. promotion of FTAA, NAFTA, CAFTA, and the WTO,

u. a too broadly drawn Patriot Act with its outrageous 'sneak and peek' provisions,

and many more things, a significant proportion of which would have been blocked by a Republican Congress had a Democrat President proposed them."

Of course, most conservatives have chosen to ignore or even deny these facts. The only answer they seem to come up with is, "Think how bad it would be if Democrats were in charge."

However, with Republicans like these, who needs Democrats?

I'm glad this question was asked. I've been away from SWLing for a while due to a move and had to sell my radios. I just bought an old GE World Monitor to get back into listening until I have my new house built and set up a good antenna, and this post reminds me that I should rejoin NASWA again and keep supporting the hobby. I always did enjoy coming home from work and finding the Journal in the mail. There are always good technical articles in it, plus looking through the Log sections and matching up where the DXer is located and what equipment he or she used gave me a clue as to what was possible for me to hear.

Near half the Air America affiliates are owned by Clear Channel.

Nobody brokers more power than they do.

Did anybody try sending an e-mail to him? That would be the quick answer to your question! lol

Personally, I doubt he was cancelled. His stuff has been sent to abuse for a longtime...dozens and dozens by myself alone.

Let's take Limbaugh, for example, when he started 17 years ago. He had 58 outlets to begin with in an uncharted sea of AM stations with an unproven format - and daytime at that. AA still has fewer outlets than Limbaugh started with. When you consider the added alternative distractions that didn't exist 17 years ago, he's still doing very well.

And it's also not all due to Limbaugh. When he's away, the ratings for that program still hold up for his replacement hosts. While he was away for some time due to his problem(s), the listeners were still there, I've heard. Maybe you have the ratings for those weeks. If so, make mention of them.

A sidebar - Does it really matter who's at the helm for the particular AA shows for a particular time slot? Would it matter if the ex-mayor of Cincy did Franken's show or vice versa, for example?

However, the real question is how well would AA do in the solid red areas of the nation that do not have an occasional oasis of blue, such as the Research Triangle in North Carolina or Austin TX? The conservative programs draw well in the traditionally blue areas that are also good radio markets. Why doesn't AA have an actual edge in their "own" backyards?

---

Iranian Propaganda Timeline

Apr 20, 2004

Iran has postponed until May 8 plans to start shifting all its international flights and most domestic ones, to and from Tehran, to Imam Khomeini International Airport, the Civil Aviation Organization of Iran announced yesterday.

The organization ascribed the delay to "unexpected problems involving fuel prices and supply". It said that the fuel prices have tripled compared to the preceding year while the CAO and the National Iranian Oil Company (NIOC) have yet to sign a deal.

http://www.iranian.ws/iran_news/publish/article_2092.shtml

[Fuel prices & supply? In Iran? - LOL]

Iran's elite Revolutionary Guards, one of the country's most powerful institutions, "stormed" the new airport on the day it opened in May 2004 to protest the involvement of Turkish-Austrian consortium Tepe-Akfen-Vie, TAV.

...the airport managed to accommodate ONLY ONE FLIGHT before it was shut down.

http://www.radiofarda.com/en_article/2005/4/12803b9a-f113-4ae1-8adf-72dcddde cd77.html

---

June 17, 2004

The agency was looking at intelligence that Iran was razing parts of a restricted area next to a military complex in a Tehran suburb, the diplomats said on condition of anonymity.

Satellite photos showed that several buildings had been destroyed and topsoil had been removed at Lavizan Shiyan, one diplomat said.

[The new RadioActive airport is also located in a south suburb of Tehran]

****
The IAEA has found traces of enriched uranium, including weapons-grade samples, at several sites in Iran. Tehran says those minute finds were not produced domestically but rather were inadvertently imported when it made purchases through the nuclear black market...
****

http://www.foxnews.com/story/0,2933,122931,00.html

Jan 14, 2005

The airport was closed down shortly after coming into operation and former minister of roads and transportation Ahmad Khorram lost his job within weeks merely due to the pro-reform government's refusal to cancel a lucrative agreement with a Turkish firm, TAV, which was in charge of handling the airport affairs.

[One year to takeover airport operations? - LOL]

http://www.iran-daily.com/1383/2190/html/economy.htm#38112

Regarding the Turkish-Austrian consortium - TAV

"Iranian authorities have also encouraged Turkish businessmen to invest in Iran. THEREFORE, we have a contradiction now."

[Contradiction of lies, spin & satellite photos! - LOL]

http://www.hadeseh.com/english/archives/002426.php
http://www.iranian.ws/iran_news/publish/article_2263.shtml

The first airplane [from N.Korea] landed at the airport in coordination with the Armed Forces, but, coming home from Dubai of national flag carrier, Iran Air, was the beginning of the controversy, Nariman explained. [Iran Air is owned by the Islamic Revolution Guards]

"Apparently, the Islamic Revolution Guards Corps (IRGC) blamed lack of security for its objection to operation of the airport. So, differences emer ged between the Ministry of Roads and Transport and the Armed Forces."

"The dispute caused wandering of the airplane bound to land at Imam Khomeini airport, so, Iran Air pilot steered the plane to Isfahan airport on his own initiative," Nariman said.

"We have heard that several vehicles had been placed on the runway of the airport to prevent Iran Air passenger plane from landing at Imam Khomeini Airport and several jet fighters flew in the sky to escort the passenger plane out of the area. This news has not been confirmed yet," he said.

http://www.payvand.com/news/04/may/1063.html

Perilous State of Iran's Fleet of Aircraft

From 2002 to 2003 three Soviet-made planes crashed in Iran, killing more than 400.

Last month, a Boeing and an Airbus both had to make emergency landings at Iranian airports on the same day.
...
http://www.middle-east-online.com/english/?id=13290

IRAN NUCLEAR SPILL COVER-UP FEARED

Western intelligence officials believe Iran's Revolutionary Guards tried to cover up a nuclear accident triggered when weapons-grade uranium was being shipped from North Korea.

The accident allegedly caused Tehran's new international airport to be sealed off by Revolutionary Guard commanders within hours of its official opening on May 9.

The first scheduled commercial landing at the airport - an Iran Air civilian flight from Dubai - was intercepted by two Iranian air force jets and diverted to Isfahan, about 300 kilometers away, even though it was low on fuel.

At the same time, trucks blocked the runway to prevent other landings.

Seven weeks later, the showpiece airport, named after Ayatollah Ruhollah Khomeini, the leader of the 1979 Iranian revolution, is still closed.

All commercial flights have to use the capital's aging Mehrabad complex.

At the time of the incident, Revolutionary Guard commanders claimed that Khomeini airport had been closed because of "security problems".

But Iranian aviation officials believe that Tehran wanted to cover up evidence of the previously unreported nuclear accident in 2002, linked to Iran's secret program to build an atom bomb.

Although the airport, 75 kilometers south of Tehran, was not ready for commercial traffic until this spring, military flights have used it for at least two years.

In December 2002, according to officials with access to the airport, a North Korean cargo jet delivering nuclear technology, including some weapons-grade uranium, was being unloaded at night under military supervision.

A container slipped and cracked on the tarmac, and everyone in the area was taken away for thorough medical examinations.

Crews from the Atomic Energy Organization of Iran, wearing protective suits, were brought in to clean up the spillage.

Once the area was decontaminated, Revolutionary Guards allowed airport construction to resume, confident that they had concealed the incident from the outside world.

But things changed after inspectors working for the UN-backed International Atomic Energy Agency uncovered evidence in June 2003 that Iran had secretly enriched uranium to weapons grade at the Kalaye electric centrifuge plant, on the outskirts of Tehran.

Iran had previously denied having the necessary technology.

The Kalaye revelations embarrassed Revolutionary Guards' commanders, who are responsible for protecting Iran's secret nuclear facilities.

The findings prompted the agency to intensify pressure on Tehran for a full disclosure on the extent of Iran's nuclear program, which Iranian officials continue to insist is being developed for purely peaceful purposes.

Iranian aviation officials believe that the Revolutionary Guards ordered Khomeini International Airport closed in case the agency inspectors detected deposits of enriched uranium.

The airport will remain closed until Russian nuclear experts can examine the site of the incident and make sure that no traces of the illegal shipment remain.

A senior Western intelligence official said: "We are aware of the concerns being expressed by Iranian aviation experts, and are trying to investigate them.

"The problem is that the Revolutionary Guards will not allow access to the airport to any foreign nationals, including UN inspectors."

Earlier this month the IAEA rebuked Iran over its failure to give a full account of its atomic program, as suspicions mounted that Iran was still trying to build nuclear weapons.

Last week, American intelligence officials provided satellite evidence that they claimed showed a nuclear site at Lavizan Shiyan in Tehran.

They said it had been razed to remove evidence of research that had been done there.

Apr 30, 2005

The Imam Khomeini International Airport, built to serve the capital Tehran, received a first commercial flight from Dubai almost exactly a year after its inauguration was aborted when the military closed it down because of concern over security.

Britain and Canada advised travelers to avoid the new airport. "We are aware of reports that the runway at the new Imam Khomeini International Airport in Tehran may not yet be suitable for use," the British Foreign Office said in a travel advisory.

"We are in contact with the Iranian authorities about this. Until the situation has been clarified, we advise British travelers to travel by flights using the existing airport."

The Canadian government issued a virtually identical warning. It was not immediately clear whether any other countries were giving the same advice.

Iran said the runway had been approved by international experts.

"I don't know the reason behind this advice," said Reza Jafarzadeh, spokesman for Iran's Civil Aviation Organization.

"The runway is ready and this has been approved by ICAO (International Civil Aviation Organization) , otherwise the organization wouldn't have issued permits for today's flights," he told Reuters.

[The ICAO are not nuclear experts! The IAEA are no longer welcomed in Iran!]

http://www.iranian.ws/iran_news/publish/article_6595.shtml

TEHRAN, Iran (Reuters) -- Hardline Iranian politicians called on the government on Sunday to sever all diplomatic ties with Britain in a rapidly escalating row over the opening of a new airport serving Tehran.

Britain and Canada issued warnings on Friday to travelers to avoid using the Imam Khomeini International Airport, which opened on Saturday, due to concerns the runway may be unsafe.

Hardline politicians ignored the dispute over safety and focused their ire on an alleged request by London that the name of the airport, dedicated to the founding father of the 1979 Islamic revolution Ayatollah Ruhollah Khomeini, be changed.

"If Britain does not apologize to Iran we will break all ties with that country and expel Britain's ambassador," said Hamid Reza Hajibabaei, a member of parliament's presiding board.

"If true, we should ... not allow any British nationals to enter our country and we should naturally cut economic ties with that country," agreed Hossein Shariatmadari, editor-in-chief of the hardline Kayhan newspaper.

The British embassy in Tehran rejected the accusation as "nonsense".

"We have never requested that the name of the airport be changed," said Charge d'Affaires Matthew Gould. "Our only consideration is for the safety of the runway."

http://edition.cnn.com/2005/TRAVEL/05/01/iran.airport/

Iran's foreign ministry described the two countries' travel advisories as "very dangerous". [???]

The financial worth of the super conglomerates is not what was once imagined, and many stations are now on the chopping block at Viacom. It costs CC next to nothing to provide AA's programming, and a little of something is better than a lot of nothing.

Limbaugh started out on one station, KFBK in Sacramento. At that point, he developed and went into business with his then-partner to form EIB and do barter syndication. This was not new, with both talk and barter going back to Bill Ballance (early 70's out of KGBS-LA) and Joe Pyne at KABC and others.

Daytime, of course, has been radio's prime time since the early 50's. Trying to do Limbaugh at night would have been a challenge!

> AA still has fewer outlets than Limbaugh
> started with.

You can not have fewer than 1. EIB started with zero, and built out of that.

> When you consider the added alternative distractions that
> didn't exist 17 years ago, he's still doing very well.

He is very entertaining. So is Paul Harvey, and he is still the most
listened toperson on rado.
>

Ratings are not done by week or month. They are quarterly.
>

Probably. Talk radio is about talent and entertainment, not content.

First, it is too new. Second, it is on mostly horrible signals. In places
like Portland (where it is on Oregon's best signal) it does great.

Viacom decided it was not worth the effort to be in markets outside the top
20. this is because about 40% of all radio revenue is in the first 20
markets, so the big money is made there. It takes as much time to supervise
a station in Palm springs as one in LA. But the payoff is about 30 or 40
times higher in LA:

> It
> costs CC next to nothing to provide AA's programming, and a little of
> something is better than a lot of nothing.

AA provides AA's programming. Clear Channel puts it on stations. It costs
money to run them... the LA affiliate must cost $100 thousand a month or
more to run.

474. DC power better?

Newsgroup: rec.radio.shortwave

In general, is it better to run a receiver off a good external DC power supply, or using AC power and the built-in transformer? It would seem to me that I might get less noise using an external DC power supply, but what is the general concensus here? Thanks.

Jeff

What do you base this on? Why do you think an external supply is
better or quieter than the one designed for the radio?

Bill,

It appears there are two camps, those who like it and those who didn't.

When looking at a receiver one has to consider how they intend to use it and what they want to listen to. You didn't indicate your interests and the others who respond didn't either. They are also not specific about what they do or didn't like.

For me, I consider it a good radio. Not as expensive as an R8B or AOR 7030+. There are other table top radios at half of the $1200 price.

I find it easy to use. I also have the external keypad but found I don't need it for everyday use.

The radio works well for general program listening. The sound quality is excellent when using the SAM modes. (I do use an external speaker.) However the radio has to be tuned precisely on station to minimize the unlocking of the sync during deep fades.

The performance for LW use is not that good. Too many AM BCB images.

The numerous IF bandwidths are very useful in crowded bands.

USB and LSB modes work well.

Hope that helps.

Well, the gentleman who purchased my RX350D said he had an earlier version and the one he bought from me operated like a totally different receiver, said the audio, sync detector was much better and the image problem wasn't there either. Obviously you thought differently.

479. Re: Splatter +/-110kHz from 9735kHz?

Newsgroup: rec.radio.shortwave
Date: 2005-05-05 02:23:51 UTC
From: Tom Holden <holden_family@sympatico.ca>
Message-ID: <Wsfee.13120$3U.837898@news20.bellglobal.com>
Source record: 21165

Strong splatter from DW program relayed via RN Bonaire on 9735 KHz now heard 4 days consecutively. I hear it at and around 9845kHz and 9625 kHz, i.e., +/-110kHz. Pretty sure it's not caused by receivers (DX-394) because:

a) Cannot imagine what mechanism would cause symetrical intermod product like this
b) Splatter is attenuated proportional to signal by inserting the 20dB pad so does not behave as an overload would
c) Splatter is unintelligible, has no carrier and does not appear to have spectral distribution conforming to a sideband so does not look like an internal intermod product or leakage through IF filters
d) I don't observe this problem with other strong stations in the same band

To be sure, I need confirmation that someone else hears it. The transmission schedule is 0200-0600UT to North America and you probably need to receive 9735 at needle pinning signal strength to hear the splatter. It helps to have two radios, one tuned to either splatter frequency, the other to 9735 so you can hear the synchronisation between the splatter and the program. DXing transmitter faults - now there's a new wrinkle to SWL!

> Les Locklear

Well, they both heard the same signals, both had decent audio, both
were "dead on" as far as frequency readout. Sure the 340 has 58
bandwidths vs, 34 for the 350D. Yes, the 340 has a better synchronous
detector. But, the 350D has a better noise reduction and blanking
system. It's not like I just started using receivers Mike, I'm 62 years
old and have owned more receivers than some small dealers have sold.
I'm just relating my experiences with the two receivers. I have an
extensive antenna system and a real good multicoupler, so it was an
equal test imho.

I have to agree with Michael.

A power supply can be well designed or poorly designed. A poorly designed supply is a pain in both internal or external form. It doesn't matter if a well designed supply is internal or external.

Some may prefer external supplies as they can power more than one radio at a time from a single supply.

There is also the belief that removing the heat generated by a supply by using an external supply improves the reliability of the radio. However, I have only seen anecdotal evidence to support this.

However, an external supply is easier to replace. Generally a plus if you have a radio that comes with a poor supply.

If you mode the radio around a lot, an internal supply may be more convenient.

With respect to noise, it may be easier to block powerline noise with an external supply. This is because you can add filters to the input and output of the supply to block noise at a short distance away from the radio.

With respect to noise generated within the power supply, excessive noise would be an indication of a poorly design supply. That can apply to internal and external supplies.

If the supply is internal, the manufacturer has control of the quality. They have the ability ensure the supply is properly designed for the application.

If the supply is external, the user is free to use a really poor supply of their choice and possibly be unhappy with the radio's performance.

If you are considering using a third party supply with a radio, how would you go about determining of the supply you are about to buy is really better than the one supplied by the manufacturer? Trial and error is an expensive method.

Fortunately, many radios with internal supplies also support use of an external supply. The user is free to try an external supply.

With respect to your original question, you are correct, you "might get less noise" but that really depends upon you choice of external supply. A bad supply could be much noisier than the internal supply.

The wording "external DC supply" versus "AC power" makes me think
that he thinks he's comparing apples and oranges. Unless he's
talking about running it off batteries, an "external DC supply" runs
off AC and is the same thing as "AC power".

When Limbaugh went national, he started with 58 stations, and WTDY in south
central WI where I lived was one of them. So I listened the first day and
was surprised how popular he instantly became in the People's Republic of
Madison.

I'm sure that some ratings were done in order to ascertain if any listener
erosion occurred during the fairly long time that Rush was away. Ratings
don't always have to come from Arbitron.

It sounds like you're making excuses why AA isn't doing as well as hoped. Besides, The left coast is strongly blue, relatively. Conservative talk does well nearly everywhere, even in strongly blue country. Otherwise they wouldn't command all those hundreds of outlets. Delayed rebroadcasts of Art Bell and Noury probably outdo AA.

JD,
.
The number (percentage) of "Bad Out Comes" typically
increases with the amount of Drugs and Alcohol that is
consumed by the Citizen {Suspect} prior to their
'encounter' with the Police. Often these 'encounters'
become "Confrontations" as a result of the impaired
mental ability Hostile Actions of the Citizen {Suspect}.
.
All the Police can do is react to the actions of the citizen.
- If the Citizen is non-aggressive and compliant with
the instructions of the Police; usually the outcome
is civil.
- However, if Citizen is Aggressive and non-compliant
with the instructions of the Police; usually the outcome
is Confrontational and Hostile; since the Police are
forced to maintain control of the situation.
.
A Drunk that proceeds to Attack a Police Officer with
their Fists; uses a weapon or tries to take a Police
Officer's Gun is a Danger to every other Citizen.
.
A person on Drugs that can not be subdued and is
Combative and requiring several Police Offices to
Restrain them is a Danger to themselves and every
other Citizen.
.
once again - the use of a tazer to subdue a citizen
may be the best answer to a bad situation ~ RHF

You think we can make him disappear for real, not just a new identity
but make him go "poof" all gone? David will still be an asshole no
matter what name he uses, so I say making him actually vanish is the way
to go. Maybe we could tell the Army that he's a terrorist. Poof, off to
Gitmo, never seen again. Or we could drop a nuke on his head, call it a
test, that would really make him vaporize. Just make sure he's away from
other people when we do that. Maybe lure him to the desert, then boom.

DE & GS,

AA's biggest foe for a slice of the "Talk Radio" Pie
is not Rush Limbaugh, it is 1200+ 'local' NPR Stations
and their "Soft Message" {Enlightened} Liberal Programming.
NPR has a Long Term Listenership {Generational} that goes
back for many more years then Rush Limbaugh has been on
the Air with his "Stick".
.
and that's my opinion ~ RHF

Source record: 21177

Greetings Jamie! I love shortwave and listen to nothing via the internet. There is something that has always been magical about radio to me. To try to get dx the computer and monitor go off. Too much interference. For casualy listening if it is a few feet away it is not much of a problem.
I have the DX-390, same as yours except without the tape and a better speaker. I find it a very exceptable portable radio. It however will overload with most antennas. Some of the guys in here can tell you where to find info on how to run a good outdoor antenna for not much money and cut back on the adjacent freq overload problem.
I have never had a remote for a table top. I am generally up in the radio anyway when I am listening so why bother with a remote unless you are listening to a strong broadcast in a casual manner.
My DX-390 is not very good at Medium Wave either. I have a much less expensive DX- 396 which beats the pants off of the 390, and pulls in stations a little better than my GE Super Radio II.
I don't think that shortwave is going anywhere soon. As with all technologies there will be change and some inevitalbly fall by the wayside. Time will tell, but IMHO not for the next few decades for shortwave.
Any kind of radio placed beside a running computer is not a good thing. Just too much RF. The monitor is usually the worst offender. Also watch for floresent tube lights. Took me awhile to figure that one out.
Hope that helps. Have a great week! Jon in S.C.

By S10 I shortened S9+10dB.

That's about -60 dBm or about 1 nW on my radios. I don't generally get signals larger than S9+10dB. That is strong enough for me to turn up the volume as loud as I want and not hear any background noise or hiss.

LOL, I'm sure every verie I get from PNG will be a carbon copy. This
looked like they used the old A.B. Dick mimeograph machine (remember
them?) for the letter head and typed the rest. Ah well, still a nice
one.

I'm too lazy right now to look through my collection, but I believe
the main station used to actually have a QSL card...

Even then he could have more noise from batteries due to the internal
resistance of the battery causing poor regulation, and noise picked up
on the wires that connect the battery to the radio.

There should be some regulation in the radio itself on the DC input,
This doesn't have to be the case, but most radios provide a DC input
for use in mobile applications, and car voltages vary from a low if the
car is not running to a high if the battery is being charged. Even
worse would be spikes from a bad diode in the alternator. Generally a
device designed to work from auto power is designed to handle at least
16V. Many put the limit at 24V, which comes from some case where people
would put car batteries in series. Yeah, I know this sounds odd, but I
worked on a bid with Chrysler and they had a 24V upper limit on the
electronics at the time. The story I got was some people would jump
start cars with two batteries in series.

The DC input should be filtered a bit in the radio as well since auto
power isn't all that clean.

Jeff, I don't think there's gonna be any consensus here. Perhaps you should just state what it is you're wanting to do and why and with what. Do you have a receiver with the ol' "External DC In" terminals on the back? Are you wanting to hook it up to a gel cell or something of that sort? Perhaps you should give more particulars and the resident IEEE community might better be able to help you.

well then everyone should be buying a 350 and saving $2500.

if they were so close, what was worth the extra $2500. that is a lot to pay
for one feature

My friend Dean is pretty much an authority on the 340 and says the sync is
not that good.

if you do buy a 350, a used one is very cheap since no one wants it. usually they are less than $800 and stay on the market quite a long time

Universal has had one in their used section for a few weeks and it usually takes them over a month to sell one.

Sounds just like white noise in between stations.

The specifics are:

I have a FRG-7, which of course runs off AC power but also has the capability to run off batteries (internal) or a 12VDC external power supply. I have a Staco PS-4 filtered power supply that puts out a very clean and stable voltage, up to 4A. It seems very well shielded, and I could put it as far away from the radio as I needed, within reason of course.

To hook it up requires me to purchase the right connectors, etc. I'm wondering if it's worth the trouble.

From: craigm wrote (in part:

There is also the belief that removing the heat generated by a supply
by
using an external supply improves the reliability of the radio.
However,
I have only seen anecdotal evidence to support this.

Aside from reliabiltiy issues, the main reason I run my R2000s and
other radios from an external supply is to reduce heat, which leads
to reduced heat. The radio exceeds it specified stability when operated
from a external power source.

Many built in supplies, and most aftermarket power supplies can be
much noiser then many here would believe. With a decent battery
powered receiver, make a noise probe, I use 10' of RG174 with a 10
turn coil at the sensor end and connector to fit the radio. Please
be certain to use insulated wire and have all he solder connections
covered. I used "liquid tape".

With the radio or external power supply to be tested move the probe
around the supply, over the AC mains input an DC output. For some
reason very few companies include the very usefull ~1000pF caps
across each diode in a bridge. This cap can really help quiten a noisy
supply.

The probe is also usefull to find noise leaks from a PC/monitor.VCR
etc. I use a DX398 because A:It is a smal,sensisitve and easy to use
receiver, and B: I own one.

My main +12V DC supply is a Lambda 12V 20A linear supply, my
backup is a 12V 8A Lambda linear. Both were much quiter then the
often touted and extremly popular Astrons. After a few additions,
feritte beads on the input/output to the bridge, 100pF micas with
very short leads across the bridge, 1000pFs across the junctions
in the pass elements, some 1uF tantalums added across the 723,
the noise was gone.

For most of us, including me, the minor noise from a decent power
supply, either internal or external, is way below the local noise
floor,
but while these mods may be waste for operation ~50MHz, they really
helped remove some noise from my NOAA APT weather satellite
reception. But even on HF during some early morning quite times,
I think the lowered noise helps. And with the borrowed AR7030+,
it is clear that with a good (quite) enough receiver all the noise you

can reduce is well worth the extra effort.

I will only have the AR7030+ for about a month, so I will be listening
a lot more then posting.

And the stock wall wart suplied with the AR7030+ just sucks.
Very noisy.

Terry

The red/blue thing is a fiction. The "most red" states" (UT and NV I
think) voted 1/3 for Kerry. Given that a popular radio show gets a
couple percent of the population to listen the pool is plenty big
enough for all flavors of opinion, even is a "red" state.

I have run my Sat800 both from the external AC to DC brick supply
and from a car battery. The AC/DC supply is nominally 9 vdc and
notoriously full of hash. The Spec's of the Sat800 say it's OK 8 to 15
Volts Dc. The car battery, fully charged at 13.8 volts is noticably
quieter than the AC/DC brick especially when you're trying to hear a
weak one thru headphones.

NPR's national news programming is meticulously even-handed (they are
under a great deal of scrutiny) to the point where the Lefties think
they are too Right Wing and the Righties think they are too Left Wing.

Any time the news is covered accurately and in depth someone with an
ideological bent will scream ''bias''.

If the news doesn't offend you, it ain't doing its job.

Something to consider: what is free now may not be so in
the future. If the BBC thinks they can make enough bucks
to have people pay for streaming services, they will. I'm
waiting for the blogging crowd to decide that they're important
enough to have people start paying for their wisdom.

In the end, the one nice thing about shortwave is that you
don't have to ante up money every time you turn on your
radio.

>to me.

I would agree on that front, although the practical value (Gaining perspective from abroad) seems better served via the internet. (Clearer, more "stations", easier for average person to broadcast, etc..)

Having said that... I have vivid, happy memories of listening to "CBS Radio Mystery Theatre" on a crystal set kit. :-) I'm hoping some place on the dial, someone is broadcasting that type of programming.

> To try to get dx the computer and monitor go off. Too much
>interference.

Yep, thats the first thing I switch off. Any CRT has high voltage, monitors are the worst! (fortunately easy to turn off) however, there is still quite a bit of noise from the other equipment. (3-4 computers, hub, network cable, VOIP modulating device, wireless network device, SCSI cables, cable modem and probably stuff I'm not mentioning) From what I gather, things like hubs and routers are actually computers designed with specific purpose. (in this age, it is cost effective to give pretty much all electronic devices a CPU, which has a clock running at a certain frequency, one would imagine these devices with cheap plastic cases are natural noise producers.)

I can't shut the computers off, they're designed to run 24/7. :-(

Floresent lights.. I've got one but it doesn't seem to matter very much. One source that took awhile to "root out" was one of those anti-rodent devices.

The big thing is the computers, I simply can't switch them off. (Right now they aren't present, so I've been able to enjoy some shortwave again when I'm there) So.. if I listen to SW, I have to work around that some how.

>For casualy listening if it is a few feet away it is not
>much of a problem.

Things I'm considering, (hopefully I'll get some feedback on this):

I could use an outdoor clothesline. It's a metal cable (steel I think) it's outdoors and would be ideal, BUT it's only about 5-6 feet off the ground. Would be perfect because I already have a ground for it, the phone co's spark arrester ground. (Phone is not used) This would be the longest option, snow would not be a problem either.

However, in my experience, stations come in better if I go upstairs which is about 20-25 feet off the ground. (but ONLY when the computers aren't running :-( )

So, I was thinking about maybe running a copper wire in the attic. This would be right above the computers though.. :-(Also, I can't see how to get to a decent ground and it would be quite difficult to do. (there really isn't an "attic" just a crawl space, I've never actually been "in" there)

Also, both antenna "plans" would run horizontal, east to west rather than north to south, so, the "broad side" would have southern/northern exposure. Is this significant? (I'm thinking horizon?) going the other way in the same part of the house, the antenna would be a fair bit shorter.

The north-south plan:

Could take another chunk of the house (an addition) and go south-north (giving broad side exposure to east/west) the antenna would be lower though. That portion of the house tends to have a lot of snow on the roof in winter. (it is slightly further from the computers, although it would be about the same height) It is above a television set, I kinda doubt my girlfriend and her daughter could refrain from using it. :-/

The money trap, keep dreaming plan:

Get a high-buck table top, with an RS-232 interface. Route RS-232 cable to the garage, (with amplification to overcome 50 ft. limit) run SW in the garage and run the audio back. Downside, ca$h and anyhow, there is a 220-voltage power line over the garage. If BPL is ever deployed... forget it. Would be kind of neat though. :-)

Spendy.. and.. well, spendy! Package everything up with fancy buzzers and things so as to convince my girlfriend it's really a fancy burglar alarm. :-) (heck, with those expenses a burglar alarm would be smart..)

>I have the DX-390, same as yours except without the tape and a better
>speaker. I find it a very exceptable portable radio. It however will
>overload with most antennas.

I kind of noticed, (I've got a fishing line reel type) didn't know it was called "overloading" though, just seems like the antenna only gives a slight improvement. (It does help with SSB listening, although I generally don't listen to those, ever hear SSB that isn't a conversation between 2 hams?)

>Some of the guys in here can tell you
>where to find info on how to run a good outdoor antenna for not much
>money and cut back on the adjacent freq overload problem.

Yea, I'm interested in that. :-)

>I have never had a remote for a table top. I am generally up in the
>radio anyway when I am listening so why bother with a remote unless you
>are listening to a strong broadcast in a casual manner.

Trouble is, spend so much time monkeying with the radio that it's hard
to pay attention to whatever it is they are saying.

>My DX-390 is not very good at Medium Wave either. I have a much less
>expensive DX- 396 which beats the pants off of the 390, and pulls in
>stations a little better than my GE Super Radio II.

Hmm... DX-396 eh? I'll keep my eyes open for a cheap one. One thing
about the DX-392 (with cassette) is that it's too big to fit in a suitcase
really, yet it doesn't "feel" like a table-top. (Anyhow, end up rotating
it for MW)

Ever try a loop antenna with yours for MW? (I haven't tried that yet)

I can remember thinking that "grundig" was supposed to be the best, but
from what I've read so far, it *sounds like* grundig have the best
advertising. Is this a common perception?

>I don't think that shortwave is going anywhere soon. As with all
>technologies there will be change and some inevitalbly fall by the
>wayside. Time will tell, but IMHO not for the next few decades for
>shortwave.

Hope not, but, BPL has me a bit concerned about this. From a practical
standpoint, there are better (clearer) options available. (satelite,
and internet, satelite is something I wish I could get into.. :-))

Makes me think that soon the only people listening to shortwave are people who
listen just because they like the technology.

>Any kind of radio placed beside a running computer is not a good thing.

Hi Terry

I have a Lowe 150 and I'm using a crappy Radio Shack 12v 500mA wall wort.
I'd like to purchase a Lambda PSU.
My question is this.

Is it safe to use a 12v 3A PSU with the my radio even though is only
requires 500Ma? In other words the excess potential Amps won't fry the
radio?

Can you recommend a certain model Lambda for my radios? I also have a Icom
R75 and some others.

I'm thinking even though the PSU can put out 3A or even 20A, the radio will
still only draw 500Ma and it will be safe?????

Thanks
Lucky

If you wanna see a load of pickaninny crap, just get involved with anybody on AOL. Now that is a pain in the neck. As for the Hardly Davidson comment, I agree totally. I see these guys in their 40's and 50's buying these things on a Monkey-See-Monkey-Do basis and all of a sudden they are pros and authorities about all things Harley. Then comes the clownish-looking leather clothing and the tattoos, and by God, the Pony Tail. Anybody who has ever ridden for any length of time (like me) knows the truth: No matter what the Village People think, the lowliest, most basic Japanese twin will handle a hundred times better and blow the doors off any Harley ever made. For a tenth the price.

Yes, but one would expect it to do well there, given
that Portland would be more receptive to AA's
format in general. The real question is whether it
can make inroads into areas that are not known for
being receptive to AA's message. That big
test is happening now in Cincy, where some of AA's
content is on one of two clear channel stations
in the area (WCKY). For comparision, Rush, Savage
and the gang are not on the other clear channel station,
WLW, but are on 550 WKRC, which has significantly
less reach than WCKY.

My prediction is that the AA format on WCKY will
last a couple of years at most. WKRC had a guy,
Carmine, in the mid 90's who was the Al Franken
type. He caused a big splash for about a year or
so, then the listenership dropped off precipitously,
and Carmine got yanked. If and when Jerry Springer
decides to run for governor or senator, he'll have
to take a leave of absence from his show (local election
laws), and then the local drawing power of Springer will
be negated.

5 kW on 550 is competitive with 50 kW on 1530.

570 is one of L.A.'s better signals.

I found these Lambds at a military surplus outlet.
Since they didn't look "military", ie camo, I got them
for less then $10 each. I will look inour catalog later,
but new they are very pricy.

As dxACE says, don't worry about the excess current capacity
of a power supply. Think of a dash light in a car, it is connected
to a battery that will deliver over 100A, yet only draws the curent
it is rated for.

Terry

If you need any evidence of the quality of external power supplies, just take a look at what Yeasu and Sony provide with their products. Forany given output required, the Yaesu and Sony units are 2 to 4 times the size of typical wall-warts and have heavy-duty cords on the DC side as well as the AC side when there is an ACcord. Most others are junk compared to these.

I currently run my Drake R7 from a 20 A 12 volt supply. Reason is I had a power supply problem with an R7 in the past because of some diodes in the power supply failing due to heat. After that I just started running it on DC.

550 has better daytime coverage and overall coverage of the local market
than 1530. As a rule of thumb, 1 kw on 540 is equal to 50 kw on 1600 at the
same location, so 550 and 1530 are going to get about equal local
coverage... with 550 winning in some areas.

At night, WCKY has large but inconsistent skywave coverage, which does not
matter as the only place they get or can get measurable ratings is in the
Cincinnati metro, where they are behind WLW and WKRC in signal strength.

Universal had one up used a few weeks ago, if I recall they were asking something like $2900 for it and I think it also came with a cabinet. It didn't last to long.

Thats right! I bought a new Hammond cabinet for $108, and I could easily get more than I have invested in it should I decide to sell. It's impressive in the cabinet, 21" wide, 7-1/4" high and 13" deep. The tuning is as smooth as I have ever experienced, the buttons and keypad all have a great feel and those three displays are great. The S Meter buld has been changed to a blue to match the blue fluorescent displays (like the older Drakes), all in all, it is a fine receiver.

This is actually one of the reasons I feel that shortwave won't be
with us much longer.

With a million or so upfront cost plus thousands each month for a "commercial
grade" station, combined with relatively few listeners (and the fact that such
listeners are global) the fact that shortwave requires "frequency jumps" and
anyhow, is heavily influenced by solar activity.. it would be pretty tough to
find an advertiser. Religion and government seem to be about it's only market.
(and government probably won't continue the services if no one listens)

Where is the business model of shortwave broadcasting?

''Clear Channel adopts liberal programming on growing number of
stations
February 17, 2005, 2:49 PM

DETROIT (AP) -- The day before President Bush's inauguration,
listeners tuning in to the Detroit sports station WXDX-AM were
suddenly greeted by the sound of braying donkeys. By the time Bush was
taking the oath of office, the radio station had new call letters and
a full schedule of liberal talk shows.

WXDX-AM -- now known as WDTW-AM -- is one of 22 stations owned by
Clear Channel Communications Inc. that have switched to a liberal talk
format in the last year. This month, KTLK-AM in Los Angeles became the
latest Clear Channel station to adopt the format.''

Check the list on the Website. the news article could, perhaps, be referring
to the number of stations that had switched recently under any ownership,
not necessarily CCU. Or, I counted wrong. In any case, they are just
affiliates.

As everyone else pointed out, it's safe (and perhaps even slightly better) to use a higher amp power supply than is actually needed. It's the voltage you need to be concerned about.

Think of voltage as water pressure and amperage as water volume. Hooking up a pipe 3" in diameter to a shower won't blow the head out, but, if you took a pipe say .25" in diameter from a high pressure pump... you'd likely blow a hole through your shower stall.

I find batteries to be the best results. 'Course, that is not very practical.

I use a cheap wal-wart, but I cut the wires and put a capacitor in the circuit, that seems to help a little. (Had at one time a HUGE capacitor, but it was too much trouble to carry around)

I suppose it all depends on how the respective power supply is built and how OLD it is. Electrolytic capacitors dry out over time, (especially older tin-can ones) which I believe explains the "hum" often heard in antique radios. As equipment ages, I believe an external supply could help in this area.

I own both the 350 and an Icom R75. For general program listening, I prefer the 350. It has great audio, and the 12kHz output allows you to experiment with DRM. When it comes to NDB listening in the low frequency end, the R75 is my receiver of choice. If I had to do it again, I would do it the same way, buy both. If I absolutely had to choose one, my interest in the lowband would favor the R75.

Hack's military career as a sailor, soldier and a military correspondent has spanned nearly a dozen wars and conflicts, from the end of World War II to the recent meltdown in the ex-Yugoslavia.

He sailed in the merchant marine at age 14 and the U.S. Army at 15. In almost 26 years in the Army he spent over seven years in combat theaters, winning a battlefield commission in Korea to become that war's youngest Army captain.

After almost five years in Vietnam Hack's cup runneth over. In 1971, as the Army's youngest colonel he spoke out on national television saying, "This is a bad war ... it can't be won we need to get out." In that interview, he also said that the North Vietnamese flag would fly over Saigon in four years -- a prediction that turned out to be right on target. He was the only senior officer to sound off about the insanity of the war. Understandably, Nixon and the Army weren't real happy with his shooting off his mouth.

With all his many awards, Hack still considers the Combat Infantryman Badge and the United Nations Medal for Peace -- which he was presented for his anti-nuclear work in Australia -- his "highest awards.

Hack is a regular guest on national radio and TV shows, and from 1990 to the end of 1996, he was Newsweek's contributing editor for defense. Besides his Newsweek cover stories and other reporting, he has been featured in magazines including People, Parade, Men's Journal, and has also been published in Playboy, Soldier of Fortune, Self and Modern Maturity. His column, Defending America, appears weekly in newspapers across America and on this site.

During Desert Storm which Hack covered for Newsweek, he was the only correspondent to accurately predict the outcome of the Gulf War. He has won many national and international awards for his Newsweek reporting, including the George Washington Honor Medal for excellence in communications.

Did you consider that there might be TWO rechargeables in series? That would total about 2.4V if they are 1.2 each as most are. I don't know the voltage the FR200 operates on.

o quote from my earlier post:
"
"My FR200G has a set of 2/3AA NiMH that are charged
by the hand crank. It will also take 3?AA cells. and accept
+4.5V into an external power port. "

They are wired in seris for 1.2X3=3.6V, or some people
spec NiMH at 1.25 so 1.25X3=3.75V.

I built an array of PV (solar cells) from dead yard night lights
that will easily power the FR200G wiht the cells in moderately
bright daylght. It willeven powr my 6V DX398.

I placed a coil around the radio with only the LED on and my scope
shows a nasty pulsing waveform, so I woud speculate the LED is
driven by a PWM. Much more efficent then a droppping resistor.

Terry

Thanks Steve, I had just found it on that very same site.

He was a good one, not popular with the ass kissing generals and
politicians at the time he was speaking out about Vietnam.

Not enough of them anymore.

In a small central KY town I witnessed the LAW use a tasser on a young woman who was not fighting or arguing. The LEO in just walked up and shot her in teh back. Now maybe she was a wanted escaped felon known to be armed or skilled in un-armed conflict. Or, a more likely, the cop weas just being the jerk that small town LEO so often are.

But it was pretty damn cold.

She was talking with her boyfriend/live in and he was the loud threatening one.

We, wife and I, wer loading abrric into our car and we saw maybe 5 minutes before the shooting. I don't know what happened and I didn't get envolved.

It was in a walmart parking lot on a Satuday afternoon.

Shocked the hell out o f me and my wife.

But like I said maybe there was more to it then what we witnessed. Or maybe teh LEO was just a jerk.

I remember thinking at the time if this happened a little further into the
hills that cop could expect a 3030 some morning with no warning no threats. Blood fueds are not supposed to be a long gone past time in eastern KY. But I khave heard credible stories of how certain bully LEOs came to sad violent ends over the last 20 years.

I am not advocating any action on the part of anyone. Just mentioning something that I saw and relating it to a certain KSP LEO who died abruptly.
The KSP officer had a bad reputation of beatting the crap out of people.
One cicitzen is reported have taken direct action. Of course the KSP made
sure the perp never came to trial. If anyone wants I will try to dig out web based refferences. The perp was shot dead by a KSP officer in Indiana.

The Best DC supply is a car or motorcycle battery. It is completely noise-free, has enough power to eliminate audio clipping, and can supply many hours of listening.
The drawbacks are the need to be recharged and the need to keep it well clear of electronic equipment because of corrosion caused by ions. Of course, you cannot use it with the charger when listening as most battery chargers are quite noisy, but I have used a motorcycle battery with a 2 amp charger that was not too bad (Schumaker Mity Mite).
To repeat, do not keep a lead-acid battery near (within 10 feet) of any electronic equipment: it will eat hell out of the boards. But it will give you the best DC supply and it need not cost too much, either.

So I take it that short wave radio signals are good, it's just those dimmers that are dangerous. If short wave signals were bad for the health of the general public, then the Power Hour would leave the air at once.

The clip is a bit short, but putting it in a loop, you can hear one tone going on and off. Perhaps this is some sort of OOK (on-off-keying), or just noise hitting a filter that rings a bit. You can't do much analysis on such a short clip.

562. China: Jamming, Censorship & Violence Stalk the Independent Press

Newsgroup: rec.radio.shortwave
Date: 2005-05-05 22:45:42 UTC
From: LC <LC@ccp.gov.cn>
Message-ID: <117l8ik5tgv4ged@corp.supernews.com>
Source record: 21097

China - Annual report 2005

The government continued its privatisation of the media and kept up its ruthless harassment of reformist journalists. The written press, experiencing competition for the first time, took some chances but was monitored and sanctioned by the propaganda department. With at least 27 journalists in prison, China was at 1st January 2005, the world's largest prison for journalists.

"China is deprived of the right to press freedom, does not permit political divergence and bans all media independence. Its political progress lags well behind its economic development and evolving attitudes," said the intellectual Liu Xiaobo, winner of the Reporters Without Borders - Fondation de France 2004 press freedom award.
A flourishing written press is monitored by the Propaganda Department, now renamed the Publicity Department. Newspaper editors enjoy every freedom to boost profits, through advertising, updating their publications or even raising capital on the stock exchange. But they have to fall in with the orders of the communist party and ensure that their staff operate a system of self-censorship.

The Beijing Youth Daily, China's second highest circulation newspaper was quoted on the Hong Kong stock exchange in December 2004. But the newspaper remains under the control of the Communist Youth League. Its editor explains its success thus, "As long as we respect the law, we can report on what interests people." This forced privatisation has pushed more than 600 publications into closure while the system of compulsory subscriptions to the official press is on its way out.
The government has deployed huge resources to maintain the monopoly of state radio and television CCTV and the press agency Xinhua. Systems such as a "great wall of sound" allowing it to scramble international radio were stepped up. With the help of French company Thal�s, ALLISS aerials were set up in every corner of the country to block foreign radio waves. The few Chinese television stations that criticise the government, on cable or satellite, have been harassed. New Tang Dynasty TV (NTDTV), accused of supporting the Falungong movement, has been targeted by the Beijing authorities since its launch in February 2002. The operator of New Skies Satellites buckled under constant pressure and ended the channel's broadcasts in China. And Chinese diplomats leaned on their French counterparts once NDTV was again beamed into Asia via the Paris-based Eutelsat W5 satellite. In July, the administration launched a campaign against the installation of illegal satellite dishes to block broadcast of "reactionary, violent and pornographic" programmes. Thousands of dishes have already been removed from homes.

Fear is also a useful instrument of control for the communist party. Such was the case with the arrest of management figures on the reformist daily Nanfang Dushi Bao that sent a shock wave through the profession. The nearly six months of detention experienced by Cheng Yizhong, star editor of this bold Guangdong-based newspaper, reminded everyone of the lines not to cross. The newspaper had carried an investigation about a student who was tortured to death in a Guangdong police station and revealed a new case of the Sars epidemic in the city without waiting for official permission. Cheng Yizhong was released but expelled from the communist party and did not get his job back. Two of his colleagues, Yu Huafeng and Li Minying, who were handed down harsh prison sentences, are still in prison.

National and international protests probably contributed to the release in 2004 of Liu Jingsheng, founder of the underground review Tansuo (Exploration), after 12 years in prison, and that of South Korean photographer Jae-hyun Seok, sentenced to two years for his coverage of North Korean refugees in China, and the reduction in sentence for journalist Wu Shishen sentenced to life imprisonment in April 1993, on the orders of the former president Jiang Zemin for having "illegally divulged state secrets".

On the other hand, nothing could prevent journalist Yu Dongyue, detained after the Tiananmen Square demonstrations in 1989, from descending into madness. A former fellow inmate, who fled China, said the journalist had been tied to an electric post and left in the hot sun for several days and then held in solitary confinement for two years.

Police continued to harass dissident journalists, including Shi Tao who was arrested on 24 November 2004 for having "divulged confidential state intelligence". Police raided his home without official authorisation, arrested him and seized his computer and papers. Before leaving they warned his wife not to tell anyone, particularly not the media, or her husband would be maltreated.

The most common sanctions are dismissal or being sidelined at work. This was the experience of Xiao Weibi, editor of the magazine Tong Zhou Gong Jin, who was sacked in September for carrying an interview with a former communist party leader in Quangdong, who backed political reform. Five of the six members of the magazine's advisory committee resigned in protest. Wang Guangze, of the bi-weekly Ershiyi shiji jingji baodao, was sidelined by the newspaper on 23 November, after returning from a visit to the United States.

Defamation cases and physical attacks are a new means of applying pressure favoured by local authorities and private companies. Dozens of journalists have been brought before the courts or received visits from henchmen when they show too much interest in investigating fraud in a country that is riddled with corruption.

Press freedom's number one enemy is however the Publicity Department, which is under the direct control of the communist party central committee. Unable to censor everything, it regularly orders journalists not to write about the more sensitive political and social issues. It is also responsible for ensuring silence on the major taboo subjects. Fifteen years after the Tiananmen Square massacre, it is still forbidden to use the term "4 June" in

the press or online. Censors have their fingers permanently on the off switch ready to cut off foreign television broadcasts. At any mention of the event, or indeed many other subjects, screens are blacked out in hotel rooms and homes of foreign residents - the only ones to have legal access to TV channels such as CNN or BBC. Numerous events attracted censorship last year and included pro-democracy demonstrations in Hong Kong, the serial killer Ma Jiajue, rioting between Han Chinese and Muslims in Henan Province, strikes in the north-east and so on�

The Publicity Department also aims to keep dissident and other intellectual critics out of the press through a blacklist. In November, it ordered the official media not to publish articles from six reformist political commentators, particularly Jiao Guobiao, who in March posted an online tract in which he said, "The Propaganda Ministry has become a bastion of stupidity and of China's most retrograde forces (�) If it is allowed to do damage with impunity, it will delay the progress of Chinese political culture and completely discredit millions of Chinese intellectuals. That is why one should rise up against the Propaganda Ministry and attack it".

With three years to go to the Beijing Olympics in 2008, the Chinese authorities have not always kept their promise to allow foreign journalists to work freely. As well as blocking dozens of foreign news site, public security closely watches foreign correspondents and has no hesitation in arresting, threatening or striking those who violate the sacrosanct "Guide for correspondents working in China". In August, journalists working for British daily The Guardian and Finland's Helsingin Sanomat were arrested for breaching Article 15 of the guide that bans conducting interviews without prior authorisation. In February, police just outside Beijing arrested a crew from French TV channel France 2 for filming poultry immunisations during the bird flu epidemic. Before releasing them, police forced them to sign a paper in which they acknowledged they had been "filming secretly". Police beat up foreign press photographers covering a football match in August.

The Beijing authorities have also attempted to get the Hong Kong media to fall into step with the rest of China. Since October, the Chinese national anthem has been played for every news bulletin. Threats against three well known radio presenters, with links to the democratic opposition, forced them to resign at the start of the year.
Despite everything, the press has grown bolder in challenging officials about social issues and disasters such as the death of 166 miners in Shaanxi Province in November. "Why are the unions struck dumb when there are accidents in the mines ?" asked a headline in the daily Dahe Bao in Henan Province.

Courageous editors have been urging their reporters to shake off their fears. Before his arrest, Cheng Yizhong rallied his staff with the following remarks : "Our work has nothing of the commonplace about it. Our cause is to move heaven and earth (�) It is a steep road to the pinnacle of the Chinese press. Our ambition, our extraordinary idealism clashes with the ugliness and dirtiness of social reality." But fear stalked the profession again

after the conviction on 20 October for "divulging state secrets" of Zhao Yan, who worked with the US daily, the New York Times, previously a respected journalist on the weekly Reform in China. He risks the death penalty.

Cut-price Chinese Car Copies

http://www.thisislondon.co.uk/news/business/articles/timid400262?source=This
#

Chinese manufacturers are producing a spate of look-a-like models - aping everything from the Mercedes S-class to the Rolls-Royce Phantom.

As with any goods made in China, the vehicles are being rolled out at knock-down prices ... which has left European and Japanese car makers feeling rather more threatened than flattered.

Some manufacturers, including Vauxhall's parent company Genera -Motors, have resorted to legal action in the Chinese courts over breach of copyright and patents - but rarely with success.

At the top end of the market, the Chinese are producing a version of the Rolls-Royce Phantom named the Red Flag.

While the Phantom is one of the ultimate symbols of capitalism costing
£250,000, the Red Flag 'People's Roller' copy can be had for £130,000 - half
the price. The Chinese BYD F6 saloon bears more than a passing resemblance
to the BMW 7 series - even down to the blue-and-white bonnet badge which
apes the BMW ' propeller' logo.

ShuangHuan Auto has created a version of Honda's Swindon-built CR-V off-roader. So incensed was Honda that it sued ShuangHuan, which in turn counter-sued.

In Britain, the CR-V costs about £18,000. The copycat Laibao S-RV sells for
less than a third of that, around £5,700.

Other popular cars replicated by the Communist regime include the Peugeot 307 and Volkswagen Passat.

Wendelin Wiedeking, chairman of the executive committee of Porsche in Germany, said: 'Years ago Americans taught the Chinese how to make fridges. What did the Chinese do? They produced the same machines under different names to harm the original manufacturer.

'I point out that these Chinese manufacturers are among the leaders in the marketplace for fridges today in the US - and the same can happen with cars.'

Last autumn, the Shanghai Automotive Industry Corporation paid MG Rover £67m
for the rights to the blueprints for the Rover 75 and 25, as well as the K-
series engine which powers them.

With Rover in administration, the Chinese company is planning to build more than 321,000 Rover 75s over the next five years and has approached UK companies to quote to supply parts.

Chinese Government Intensifies Control over Broadband Connections

http://english.epochtimes.com/news/5-5-5/28504.html

CHINA - Broadband users inside China have revealed that they can no longer access overseas e-mail accounts due to the recently intensified control of the Internet. A notification has been published by the Chinese Broadband Control Agency forbidding users from receiving "anti-revolutionary" information from overseas. The original system administration software has now expired; all users now have to download the new system administrative software which is said to be capable of not only filtering all overseas e-mail accounts, but also of monitoring users. Currently, Yahoo China is subject to the new controls.
[Editors' note: Computers in China that can access the Internet, especially public computers, are required to have special monitoring software that allows the Chinese Communist regime to monitor a user's activity on the Internet.]

Extensive Information Net reported on May 2 that in China, most users of Windows 98 could not connect via dial-up to the Internet any more due to these strict new measures. This is because dial-up connections are able to use proxy servers which can bypass the domestic server that is controlled by the CCP. This is why the use of broadband connections is being promoted, and dial-up connections are being eliminated. Broadband connections are being strictly monitored and controlled by the government, creating the equivalent of an Intranet.

It is reported that although broadband connections improve speed, all the websites are filtered, thus making connecting to proxy servers extremely difficult. Even if a successful connection to a proxy server is made, it would be immediately terminated. In addition, websites visited through proxy servers will be made to "disappear.".The CCP appears to be willing to turn a blind eye to pornographic websites, but never to those from overseas containing "anti CCP force" materials.

It seems that the main reason the Chinese government is replacing dial-up with broadband is to eliminate proxy servers and monitor overseas e-mail accounts. Once connected through broadband, those who use Hotmail and Yahoo will be subject to monitoring. Broadband connections have now been installed in all Internet bars. It is reported that the CCP has intensified its Internet blockage recently, further stifling the availability of information regarding this situation inside of China. All that people are permitted to see are the same kinds of propaganda that are reported by People's Daily and CCTV- the mouthpieces of the CCP.

I think he is referring to H2SO4 (Sulfuric Acid) fumes given off when it is being charged. If you don't think Sulfuric Acid is BAD NEWS for lots of things just do a search for "Sulfuric Acid" and see. Here's a MSDS sheet on it, but it basically deals with SAFETY. Material Safety Data Sheet = MSDS.

Now, if you get into FUMING SULFURIC ACID (also known as concentrated) you're talking a whole different ball league -- not just a game!

Face to Face With The Great Firewall of China

http://www.canada.com/technology/story.html?id=6aabb570-9f4d-491c-b915-a5cbb1842292

As the Internet was taking flight in the early 1990s, John Gilmore, one of the co-founders of the Electronic Frontier Foundation, a leading online civil liberties group, is credited with having coined the infamous phrase that "the Internet interprets censorship as damage and routes around it.'' Gilmore's view has since been regularly invoked whenever there are failed attempts to limit the dissemination of information.

Beginning with a string of cases dating back to the Paul Bernardo trial in the mid-1990s, the Internet has undermined court-ordered publication bans in Canada with surprising frequency. The latest incident occurred last month when a U.S. website posted evidence from the Gomery inquiry that was subject to a publication ban. The ban was lifted within days, however, as Judge Gomery acknowledged what had become obvious to all -- supposedly secret testimony was readily available to anyone with Internet access.

While these events seemingly affirm the notion that the Internet is beyond the reach of governments and courts, my recent trip to China provided a powerful reminder that unfettered Internet access is far more fragile than is commonly perceived. China, which boasts the world's second-largest Internet user base, is currently home to more than 94 million Internet users, yet their Internet is far different from ours.

These differences are not immediately obvious. My hotel in Beijing featured high-speed Internet access much like that offered in hotels throughout North America. Logging onto the network was a snap and I quickly found that bandwidth speeds were comparable to those found at home.

It was once I sought to access common news sites that I found myself face to face with the "Great Firewall of China.'' Google News, a popular aggregator of news stories from around the world, would not load into my browser, apparently blocked by a filtering system that employs 30,000 people to regularly monitor Internet traffic and content. Similarly, while the BBC website would load, attempts to access news stories on that site yielded only error messages.

My frustration increased when I attempted to download my own e-mail. While I was able to access my Canadian-based mail server storing my messages, the download was short-circuited midway as I suddenly lost the connection. Although I initially thought that perhaps the error lay at the Canadian end, when the experience repeated itself, it became clear that the Chinese system was filtering my email messages and cutting off the connection.

Having experienced limits in accessing both news and email, it came as little surprise to find that the search engines were subject to similar restrictions. Searches for articles on circumventing the Chinese filters yielded a long list of results, none of which could be opened. Moreover, inputting politically sensitive words such as the "Falun Gong'' cut me off from the search engines completely.

While I found using the Chinese Internet exceptionally frustrating, most people I spoke to were resigned to an Internet with limits. They live with the fact that in recent months the government has shut down thousands of Internet cafes, an important point of access for many citizens. Many noted that the censorship "only'' affected political information, but that business could be conducted online unimpeded. At one academic conference, Chinese law professors even spoke of the desirability of increased content regulation and supported government limits on search engine results.

As groups such as Amnesty International and Reporters Without Borders regularly seek to remind us, the Chinese Internet is not unique. Countries throughout the Middle East and in parts of Asia employ similar technologies to limit their citizens' access to a medium that most Canadians now take for granted.

It would be a mistake, however, to think that the Canadian Internet will always remain just as free as China's is censored. Canadian law enforcement officials are actively lobbying for a series of "lawful access'' reforms that will provide authorities with dramatically increased Internet surveillance powers. These include mandating real-time network surveillance capabilities on Canada's biggest Internet service providers and providing authorities with the right to demand subscriber information without the need to obtain a prior court order.

While it would be unfair to characterize the lawful access proposal as comparable to the monitoring and censorship used in the Chinese Internet, my experience provided a sobering reminder of the dangers inherent in increased surveillance and weakened judicial oversight.

The Internet may be accessible from Ottawa to Beijing, yet people in these two cities do not access the same Internet. The challenge in the months and years ahead will be to promote Gilmore's vision of online freedom through lobbying for greater access abroad and rejecting unnecessary and potentially dangerous limits at home.

Michael Geist is the Canada Research Chair in Internet and E-commerce Law at the University of Ottawa.

Jamie,

Yes, you can run your radios with computer left on. I do it all the time.
My laptop is running on wireless connection. The radios are less than a half a foot a way from the computer. With hookups to several radios. And I experience practically no noise at all. I have tried the setup with a Desktop and monitor and experienced the same noise free results.

There are a few things you can do to make it possible.
Contact me off the group and I will be glad to give you some pointers.

Source record: 21208

Pastor Peters is on 7.465 with his first hour of the night and the next hour, immediately after this one, will be on 5.070 MHz.

He had mentioned several times that he'd like to be on an hour earlier so it would not be so late for the east coast folks. I don't know if this is a permanent change or not, but last night his 11-12 hour on 5070 was filled by someone else. Therefore, I'd say it's permanent.

The time is 21:00 EDT / 01:00 UTC for the first hour.

First, I'm going to assume that there's a problem with the way the
file is encoded - if it's stretched out to 10 seconds (more or less)
then you can start getting a sense of what's going on.

Sounds like some sort of analog, time-multiplexed, instrumentation
signal to me.

Gotcha, but I don't see why anyone would choose to power their receiver off such a battery. There are plenty of sealed lead-acid and gel cell batteries on the market that are safe for indoor use and that produce negligible emissions.

Hi Steve, I power two transceivers (1 VHF, 1 HF) off a 12vdc deep cycle battery, and the Drake R8B is powered from the computer's UPS. Other radios and tuners that can accept external DC get it from non-switching DC power supplies. Price was somewhat of an issue in a battery that is required for both normal and stand-by use, and the only reasonably priced deep cycle's were vented lead-acid types. Once a month I use a powerful charger and only in an outside vented area. But the 1 amp float charger produces very little gasses and would not overcharge unless left on for days with no draw on the battery. For some very high operating temperature receivers such as the older Icoms, external DC is the only way to go, unless you can provide constant air movement over the radios. It has zero effect in reducing noise in my opinion, but heat is the enemy of all electronics and definitely shortens their lifespan. Unless the receivers have a narrow-band stabilizing ceramic oven oscillator option, the receiver will drift less when external DC power is provided.

Under normal circumstances yes but for a failure of some kind that can
draw more power so you should use a fuse. The fuse should be near the
supply end in case of a short in the cord.

Hello all. I'm new to the SWL hobbie and to news groups so bear with me. I was wondering if anyone knows anything about a Radio Shack DX-160. I just got one off of ebay for $60. My question, is it better than my Grundig S350 ? I've been listening to SSB on the S350 with a Grundig FR-200 as the bfo. Just wondering if the DX-160 will be a big improvement or a waist of time. Thanks for any reply.

I can't vouch for the exact math, but it has to do with ground conductivy
and I squared R losses versus frequency. Lower frequencies have better
ground conductivity (hence ground wave) than higher ones. Much more of the
signal is sky wave at the high end of the dial. Many 50KW stations on the
high end of the dial don't even cover their service areas at night (When I
lived in west Portland, OR, in the 70's, I used to get nearly as much signal
on 1520 from KOMA in OKC as I did from (what was then KYXI) on the same
frequency a few miles away in Clackamas.

| 550 has better daytime coverage and overall coverage of the local market
| than 1530. As a rule of thumb, 1 kw on 540 is equal to 50 kw on 1600 at the
| same location, so 550 and 1530 are going to get about equal local
| coverage... with 550 winning in some areas.

David - I take exception to this assertion. Sure, low-end ground wave is better...MUCH better...than the high end, but it's more like a factor of 5, maybe 10...not 50. In fact, referenencing the FCC graphs available as PDFs, the 560kHz graph shows that, for the 20mmhos conductivity curve, for example, the curve intersects 10mV/m at 9.6km, whereas for the 1550kHz graph, this point is at 7.6km....hardly even a factor of 2, and when squared (for coverage area) only a factor of 1.5 or so. So, sure, a 1kW station may have decent coverage at 550kHz of perhaps 1000 sq.km, but a 50kW operation at 1600 kHz is still going to have much, much more.

I would never have expected that large a difference in a loss result for
a vertically polarized signal except at the transmitter antenna. At the
transmitter antenna I would expect that the ground radial systems

employed would reduce the differences there between 500 KHz and 1500 KHz.

The difference in ground conductivity at different frequencies. On the AM
band, all else being equal, a lower frequency will cover much more than a
high one.

I actually ran maps of a 5 kw below 600 and a 50 kw above 1500. Both located in areas of the same conductivity, within a few miles of each other. The low frequency station covers slightly less than the 50 kw right above 1500.

A good practical example is the 5 kw coverage of WMT and the 50 kw of KXEL, a few miles apart in identical high conductivity areas in Iowa. one on 600. The other on 1540. A run on the coverage of each reveals 600 with slightly better coverage than 1540. Or, take the 550 real coverage of KFYR in Bismark or the daytime 5 KW of KNAX in Yankton, and compare with WHO on 1040. Both cover greater areas for comparable signal levels. In fact, KWMT, a 5 kw on 540 in Ft. Dodge, IA, used to advertise in the 50's as having the largest land coverage area in the USA, and the ads were certified by one of the major consulting engineering firms of the day.

Reasonable heat is not a significant factor for modern electronics.
Humidity and moisture are more of a factor and heat lowers both. On/off
cycles are the most damaging.

609. CBC's "As It Happens" = Terrible Program

Newsgroup: rec.radio.shortwave
Date: 2005-05-06 04:28:22 UTC
From: junjunius@yahoo.com
Message-ID: <1115353702.741044.254800@f14g2000cwb.googlegroups.com>

It's almost as awful as that NPR atrocity called "Fresh Air" (mind you, I said ALMOST...Fresh Air easily one of the worst things going on radio). Barbara Budd or Mary Lou Finlay, who host "As It Happens", should be shifted to janitorial duty at the CBC. Both have horrible, grating voices, with irritating personalities to match. The "humor" on the program is patently un-funny, and the lame human interest stories are an utter waste of time. CBC can do better than this.

They have their moments. The thing I hate the most is the constant interruption
of the guests while they are responding. It is REALLY irritating.

A problem with file encoding would not surprised me. I wrote the code
to generate this wave file from a 21 megabyte file. Speech comes out
fine so if errors are present they are minor.

>
> Sounds like some sort of analog, time-multiplexed, instrumentation
> signal to me.

I have also observed evidence of time multiplexing. Short term analysis
shows rapid shifts in spectra. By increasing duration of my transform
to hundreds of milliseconds or longer, I find a dominant sinusoid
emerging around 900 Hz.

I interpret these results as showing a simultaneous amplitude and
frequency modulation of audio.

Opinions are like assholes Mike, everyone has one and lots of them stink. I operated both receiver side by side and i stated my opinion. Magne isn't the end all for receiver reviews ya know.

I know you had a bad experience and seem to have a hard on for Ten Tec. That is your opinion and right.

Mine differed from yours.

These are 'value for money' reviews, not objective performance reviews. See the Sangean ATS808 outvalues both with a 5 average rating but we know that it would be far below the R8B in performance. Since anybody can submit a review, the whole rating system is suspect but one would hope that the more reviews submitted the closer the average will reflect popular opinion. Comparing these average 'value ratings' for receivers in the same price class might be significant but, even then, a spread of 0.2 (4.8 vs 4.6) is not, even with a very large number of reviews. There are only around 20 for each.

Are times getting tight/tough yet?

In addition to Big Blue laying of 10,000 to 13,000 people most of whom they claim will be in Europe, perhaps to make it more acceptable to people in the U.S., now we have doctors (well, at least one) losing homes to foreclosure!

You "heard" me right. The Henderson, NC, Daily Dispatch has in this mornings Legal Notices the foreclosure of a home of an MD - Medical Doctor. They don't state it is the home of a doctor, but I know it is. No, I could not find a url to it. I even did a search on hendersondispatch.com for legal notices using several variants, but to no avail. I suppose they don't have their legal notices online.

I won't name the doctor, a black female, since I can't provide a URL to point you to. Perhaps there are many factors, such as divorce, lose of job, etc. that helped to cause the situation. I think I heard several months ago that she would be changing employment, but without any type of explanation.

Anyway, it's in TODAY'S Daily Dispatch under the legal notices, and I believe it is the very first one.

NOW, Don't feel so bad when you go to a doctors office, wait three hours to be seen, get nothing done and still get a bill for $60 for the ten to fifteen minutes he/she spoke with you! They *could* be about to lose their home! :-)

Some of the "hams" - especially in the QRP/CW leagues - like to take gel cells out into the boonies where there is little electrical "noise" and hold their contests. They work very well. You'd also be surprised where you can reach out to, or hear from, when you're out by a quite lake with a very high antenna and no electrical appliances around. Use a bow and arrow to "shoot" a string over a tree limb to pull the antenna up good and high!

Nice way to spend an afternoon, or all day! :-) Some stay the whole weekend.

People tend to use what they already have handy! I've worked in power plants where many lead-acid batteries would be assembled together, usually in their own private room or with some other "equipment" as backup for the controls, some lights, etc. Usually, they'd be in series to provide at least 120 volts DC - part of which then probably had to go through an inverter to maintain AC controls. Sometimes they'd be paralleled also to provide higher amperages or provide the voltage for a longer period of time. Ever seen a gel cell that provided 800 CCA? I think the ratings and costs may be one reason to go with lead acid.

First thing they could do is change the theme song -- ripping off Edwin Starr's "25 Miles" for a theme doesn't do anything to make the show more listenable.

642. Degen DE1102 charging circuit ?

Newsgroup: rec.radio.shortwave
Date: 2005-05-06 14:44:18 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <117n0le2f22j750@corp.supernews.com>
Source record: 21326

I recently purchased a used Degen DE1102 radio and all works fine except the charging circuit. The batteries take a charge when placed into another charger, but not when the radio is plugged into the wall adapter. The radio performs very well on batteries or using the adapter, but the charger just does not work. There's no problem with replacing them with another set of batteries while the originals charge in a separate charger, except that most chargers expect pairs of batteries and this radio uses an odd number.

Any suggestions?

Thanks,

Al

I could not receive it on the lower freq. but got a brief blurb on 8983
USB. I thought I heard "Georgetown" which might be SC. There is a low
passing through the lower part of NC today and causing a lot of rain for
the coastal area. I expect the waves are a bit high and visibility may
also be reduced somewhat. ...Not a good time for smaller vessels to be
out, but I don't know the size of this one.

The show has been on for probably 30 years and is among the most popular CBC productions.

No way. The theme has to stay after these many years. This has been the
theme throughout the shows 30 or so years' history. I like the hosts, and
their approach to interviews. Some of the stories are certainly fluffy,
and some are very poignant.

nos... wrote (in part):

Where is the business model of shortwave broadcasting?

Jamie

"Business model"?
What "business model".

It is one of the few ways for most governments to
get their version of the "TRUTH" to the world.
Good PR/propaganda , you decide which is which,
is priceless.

I had a chance to talk with a engineer who left the USSR
befroe the meltdown and he told that "Radio Free Eurpoe"
was a "God send". His words not mine. I suspect the RFE,
VOA, and all the other hostile SW stations didn't help the
party control the people. Look at how hard the PRC is working
to control access to "hostile", IE truthfull or non communist,
internet outlets.
In NK tit is a captial offense to have a tunable radio. The only
legal ones are crystal controlled, locked to government stations.
A friend works with a NGOfood outfit and she told me that she
always carries a SW radio with her when she goes into the wild.
NK Customs had a s-fit. She thought they were going to arest her
on the spot, instead the labeled her persona-non-grata and sent
back to china on the same plane she came in on. And they destroyed
her radio before letting her go.

Given the time, resources and money required, I am assuming that
places who wish/need to control their populations must find it
reasonable
to go to all that trouble to limit outside influence.

The only SW outles with any sort of "bussines model" must be the church
based ones. They must find it worth while to spend the money.

I agree with that. And the Drake R8B for instance, produces very low heat from it's internal transformer. Icom's R-7000, R-7001, R-71A and R-72 on the other hand, produce excessive transformer heat, and function much more reliably and with assured improvement in longevity by using external DC. Anyone who has worked on the above radios knows the latent damage to them by their normal operating temps, which are excessive for optimal performance. There are kits to install cooling fans for them, or you can move air over them by external fan, or you can operate DC. To each his own.

They did have an updated version for a while after Barbara Frum left/died of cancer (she's the mother of the former Bush Jr speech writer David Frum, who created the phrase "axis of evil"), but they reverted to the old. I think they are stuck with the theme now forever. Those of us who have lived with the theme for many years would find it as difficult to have a switch as you might for any long running show theme.

Shortwave signals are good, sometimes very good. And you're right, dimmers are dangerous. However, all sorts of RFI can ruin your health, not only the RFI from dimmers. Although the guest didn't come right out and say it, it's obvious that anything which interferes with shortwave radio reception is potentially deadly.

Warn your neighbors!

I don't know of a reason for obtaining a discriminator output of an HF receiver, can you explain what this output is for? Several software programs require it for VHF and there are many websites that describe the location of unfiltered audio taps to obtain this.

According to Dan Sampson's scheds of English language sw broadcasts,
the Voice of Africa's English language schedule is as follows:

1145-1200 Af 17695fr, 21675fr, 21695fr
1730-1745 Af 11860fr
1745-1800 Af 15220fr, 15615fr, 15660fr, 17695fr
1815-1830 Af 9485fr, 11635fr, 11715fr, 11860fr, 15660fr,
17695fr
1915-1930 Af 11635fr, 11715fr
1930-1945 Af 11715fr
2030-2045 Af 11635fr
2115-2130 Af 11635fr

Note: "Af" refers to the target region, Africa; "fr" - relayed via
France.

Find Dan Sampson's full English language scheds at
http://www.primetimeshortwave.com

> going to
> have much, much more.
> --

I did a little more research on this, and the key issue is, of course, conductivity. I am guilty of using the old adage of 1 kw at the bottom is equal to 50 kw at the top... which is true on average conductivity paths to a great extent.

In fact, I've seen different numbers like 50kw at 1600 would equal 280w at 540. I had some sites run in CommStudy and found it depends largely on ground conductivity and what contour you want to reach.
We used a theoretical site at sea where all signals propagate over 5,000 ms and a site in Newfoundland in Canada where it was 1ms.

At sea, it took 1,010 watts of 1600 to equal 1000 of 540 if one wanted to get to the 25mv contour. It took 1,070 to match the 5mvs, and 2,100 watts to match the 0.5s.

On nasty land, it took 21kw to match the 25 and 5mv contours (they weren't the same but just eyeballing them, they were a 99% fit. It took 42+ kw to get them to match at 0.5mv.

So, while milage may vary, the fact is that there can be as much as a 40;1 ratio on contour coverage just in these examples.

No accounting for taste, is there?

I've never been a huge fan, but it does get a large number of listeners
every day.

660. Some power supply considerations

Newsgroup: rec.radio.shortwave
Date: 2005-05-06 17:06:12 UTC
From: r2000swler@hotmail.com
Message-ID: <1115399172.588193.261850@z14g2000cwz.googlegroups.com>
Source record: 21346

I power all of my radio equipment from one large
Lamda 12V supply. While it does have internal
protection in the event the sereis regulator
shorts and dumps >20V on the 12V buss, I wanted
beter protection. The "Crow bar" Over Voltage
Protection has a fairly wide range and I wanted
to be able to set mine to 15.500V.

While doing some reserach for my work, the field
geeks have fried any number of sensitive electronic
instruments by powering them from a "standard"
automitive electrical system. There a lot of
spikes, both positive and negative, short term
over voltages of up to 18V that last for 4 to 5
seconds that lab equipment just can't cope with.
We used a analog storage scope to capture these
events. We tested all the work vehicals, and all
the staff's vehicals who would agree. I tested my
1991 Civic a lot.

This link points to a simple and effective OVP
unit that won't bankrupt anyone.
http://www.aeroelectric.com/articles/crowbar.pdf

We built enough for all of the sensitive equipment.
Since that time we have not had a single piece of
equipment damaged. Before at elast once a week
I got to repair something.

I used components from several surplus outlets and
built mine for about 4$ a unit. I added one to the
inside of all my +12V gear that had space. And the
OVP can be made pretty small. I built external units
for those that didn't have any spare space in the
mini Altoid tin boxes. I even built several in old
Buss metal fuse boxes.

I only made one change, I added a Si diode at the
input of the OVP to protect against reverse spikes.
I used 10A Si diodes, I suspect that 1N4001s would
work just fine.

Is this over kill? I don't know. But I do know that
several years ago a friends wife had car trouble and the
AAA "mechanic" managed to jump start the car with the
jump battery backwards. Fried the ECU, alternator, car

radio, and all of his ham radios that happened to be on. Yes, she should have turned them off, but people make mistakes, so this is cheap insurance to help prevent that tragidy. AAA ended up replacing all of the damaged equipment, but it took 18 months.

Terry

I listen to a fair amount of NPR/PRI programming (Morning Edition, All Things Considered, Diane Rehm, To the Point, The World, etc.). Fresh Air, however, is one program that I can't quite tolerate (and that theme music on Fresh Air...geez!). Thankfully, the NPR affiliate I listen to has placed Fresh Air at the 3:00 AM time slot.
As for "As It Happens", I guess it does have an NPR feel to it. I'd probably have to side with the earlier comment that "it has its moments", although the program is no favorite of mine. As far as the interviewer-interrupting-interviewee issue goes, I can think of no one worse than Charlie Rose on PBS. He's a real mediocrity. Not only does he interrupt the person he's interviewing, he actually tries to finish their sentences for them. How this guy got his own show...God only knows. But I suppose Charlie Rose is a bit off topic here. Well, maybe not -- NPR, PBS, As It Happens... in many ways of the same mould.

Go to the archive for rec.radio.shortwave at groups.google.com and
search back for "DX-160". There was a good thread a few months
back on what's the best antenna to use with it. It should be
comparable to the S350, maybe with less images but prone to
overload if you put too much antenna on it. Probably a lot nicer
to tune, as it's got smoother acting knobs (as I remeber playing
with it in the store back when it was new).

The bastard (Osama) had his security procedures down good enough that
a small hit squad wasn't going to cut it. And Russia, (and Iran, and
Pakistan) wouldn't tolerate the large scale action necessary at that
point.

CBC has done better than this, As It Happens has been on the air for 20 some years, and I did prefer Alan Maitland and Michael Enright, but times change. Give them a chance for a few weeks, it's impossible for every item to entertain every listener, every night. Still love it, tho. Who I sorely miss are Peter Gzowski and Vicky Gabereaux, whose programs I based my day around for many happy years.

666. Re: CBC's "As It Happens" = Terrible Program

They did change the theme song a few years ago. Popular outcry changed
it back to the version you now hear.

I fear that wasn't a particularly good deal when you're mainly looking for improved reception. The S-350 is by far no DX rig (someone said the innards reminded him of '70s portables; at least the narrow filter is a CFU type), but the DX-160 never was either. As far as I'm aware it was an entry-level rig for a number of people on your side of the pond back in the 70s (and thus qualifies for some good memories, but that's about it). You'd better picked up, say, a Sony ICF-7600D(S)/2002/2003, Grundig YB400 or invested a bit more ($80) into a new DE1103.

671. Good morning or good evening depending upon your location. I want to ask you the most important question of your life. Your joy or sorrow for all eternity depends upon your answer. The question is: Are you saved? It is not a question of how good you are, nor if you are a church member, but are you saved? Are you sure you will go to Heaven when you die? GOOGLE·NEWSGROUP·POST·156

Newsgroup: rec.radio.shortwave

This is the most important question of your life.

The question is: Are you saved?

It is not a question of how good you are,
nor if you are a church member, but are you saved?

Are you sure you will go to Heaven when you die?

The reason some people don't know for sure if they
are going to Heaven when they die is because they
just don't know.

The good news is that you can know for sure that
you are going to Heaven.

The Holy Bible describes Heaven as a beautiful
place with no death, sorrow, sickness or pain.

God tells us in the Holy Bible how simple it is
to be saved so that we can live forever with Him
in Heaven.

"For if you confess with your mouth Jesus is Lord
and believe in your heart that God raised Him from
the dead, you WILL BE SAVED." (Romans 10:9)

Over 2000 years ago God came from Heaven to earth
in the person of Jesus Christ to shed His blood
and die on a cross to pay our sin debt in full.

Jesus Christ was born in Israel supernaturally to
a virgin Jewish woman named Mary and lived a sinless
life for thirty-three years.

At the age of thirty-three Jesus was scourged and
had a crown of thorns pressed onto His head then
Jesus was crucified.

Three days after Jesus died on a cross and was
placed in a grave Jesus rose from the dead as Jesus

said would happen before Jesus died.

If someone tells you that they are going to die and
then three days later come back to life and it
actually happens then this person must be the
real deal.

Jesus Christ is the only person that ever lived a
perfect sinless life.

This is why Jesus is able to cover our sins(misdeeds)
with His own blood because Jesus is sinless.

The Holy Bible says, "In Him(Jesus) we have
redemption through His blood, the forgiveness of
sins..." (Ephesians 1:7)

If you would like God to forgive you of your past,
present and future sins just ask Jesus Christ to be
your Lord and Saviour.

It doesn't matter how old you are or how many bad
things that you have done in your life including
lying and stealing all the way up to murder.

Just pray the prayer below with your mouth and mean
it from your heart and God will hear you and save you.

Dear Jesus Christ, I want to be saved so that I can
have a home in Heaven with You when I die. I agree
with You that I am a sinner. I believe that You love
me and want to save me. I believe that You bled and
died on the cross to pay the penalty for my sins and
that You rose from the dead. Please forgive my sins
and come into my heart and be my Lord and Saviour.
Thanks Lord Jesus Christ for forgiving me and saving
me through Your merciful grace. Amen.

Welcome to the family of God if you just allowed God
to save you.

Now you are a real Christian and you can know for
sure that you will live in Heaven forever when this
life comes to an end.

As a child of God we are to avoid sin(wrongdoing),
but if you do sin the Holy Bible says, "My dear
children, I write this to you so that you will not
sin. But if anybody does sin, we have one who speaks
to the Father in our defense Jesus Christ,
the Righteous One."

Those of you that have not yet decided to place your
trust in the Lord Jesus Christ may never get another

chance to do so because you do not know when you
will die.

Jesus said, "I am the way, the truth and the life:
no one can come to the Father(God)(in Heaven), but
by me." (John 14:6)

This means that if you die without trusting in Jesus
Christ as your Lord and Saviour you will die in your
sins and be forever separated from the love of God in
a place called Hell.

The Holy Bible descibes Hell as a place of eternal
torment, suffering, pain and agony for all those who
have rejected Jesus Christ.

The good news is that you can avoid Hell by allowing
Jesus Christ to save you today. Only then will you
have true peace in your life knowing that no matter
what happens you are on your way to Heaven.

Praise the Lord!
Servant of the Lord Jesus Christ

QST de W1AW
Propagation Forecast Bulletin 18 ARLP018
>From Tad Cook, K7RA
Seattle, WA May 6, 2005
To all radio amateurs

SB PROP ARL ARLP018
ARLP018 Propagation de K7RA

NASA Science News carries a story titled "Solar Myth," about the fact that there is still solar activity toward the bottom of the sunspot cycle. The article gives examples of x-ray flares at the bottom of recent cycles and shows that the sun is anything but quiet. The peak and the bottom of the sunspot cycle are only really known after the fact, when we can look back on a graph showing a moving average over many months. This is when the graph appears smooth, and you can clearly see tops and bottoms. Otherwise there is a great deal of daily variation.

Read the article on the Science@NASA site at,
http://science.nasa.gov/headlines/y2005/05may_solarmyth.htm?list164615.

Over the past week sunspot numbers increased, recovering from the days of no visible sunspots. Average daily sunspot numbers rose 35 points to 60.9, and average daily solar flux rose nearly 24 points to 107.7

A new month began last weekend, and we can now examine the April averages and compare them to previous months.

The monthly average of the daily sunspot number for November 2004 through April 2005 was 70.5, 34.7, 52, 45.4, 41 and 41.5. The monthly average of the daily solar flux over the same months was 113.7, 95, 102.3, 97.2, 89.9 and 85.9. Whenever we examine monthly or quarterly averages we see the decline of the solar cycle quite clearly.

Currently solar flux is expected to remain above 100 for the next couple of days, then decline to below 90 after May 12. Geomagnetic conditions should remain quiet this weekend, then become unsettled to active May 9-11. The predicted planetary A index for May 6-13 is 10, 5, 10, 25, 20, 15, 12 and 8.

This week I received several messages asking "What do these numbers mean?" In a very basic sense, HF operators would love to see lots of sunspots (high sunspot numbers and probably high solar flux) without any geomagnetic disturbance, which would be indicated with a low A

and K index. But definitely check out the advice toward the end of each bulletin, in the next to last paragraph.

You can also use W6ELprop, free from http://www.qsl.net/w6elprop/ to figure your own propagation paths for various bands and times of day to anywhere else in the world. Instead of solar flux, use an average of several days sunspot numbers with W6ELprop. You can get those recent daily numbers from http://www.sec.noaa.gov/ftpdir/indices/DSD.txt . The daily sunspot number is in the column marked "SESC Sunspot Number."

If you would like to comment or have a tip, email the author at, k7ra@arrl.net.

For more information concerning radio propagation and an explanation of the numbers used in this bulletin see the ARRL Technical Information Service propagation page at, http://www.arrl.org/tis/info/propagation.html . An archive of past bulletins is found at, http://www.arrl.org/w1aw/prop/ .

Sunspot numbers for April 28 through May 4 were 71, 46, 53, 61, 55, 79 and 61 with a mean of 60.9. 10.7 cm flux was 98, 105, 106.4, 111.6, 112.2, 112.3 and 108.7, with a mean of 107.7. Estimated planetary A indices were 4, 12, 21, 26, 7, 10 and 7 with a mean of 12.4. Estimated mid-latitude A indices were 1, 8, 13, 14, 6, 6 and 4, with a mean of 7.4.

BLUSH! BLUSH! You are SO right! Perhaps it was because it was so very far over in the book . . . . page 3. ;-) It's charging now.

Thank you very much for the reply. I'm used to "automated" things and had no idea we had to tell it how long to charge. ...But then knowing of a couple of other features of this radio, such as the sleep timer, I should have realized it.

I had no plans of tossing it out, anyway, as I have several chargers and extra batteries. It's a GREAT little radio for the money. Light weight. Small / compact. Loaded with features. Perhaps I should have saved part of my time spent on the internet to read the instruction manual. Now, If I just don't flip the book to the wrong side. I know NO Chinese.

I promise! I'll read the book - probably tonight! :-)

From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <117nmhlgs0hgo7c@corp.supernews.com>
Source record: 21261

I recently posted about a finger being REAL and gave a url to which you'd probably have to register to read. It was of the Kohl's ice cream worker who lost his finger cleaning a machine.

Read http://www.starnewsonline.com/apps/pbcs.dll/article?AID=2005205060313&source=email to learn there is a legal question over who owns that finger, the guy who lost it or the guy who found it in his ice cream and had licked the ice cream off it like cleaning a chicken bone found in some stew. What a surprise! :-(

to
> a great extent.

Another way of explaining the frequency dependence is to consider the phenomenon of skin effect in conductors. The higher frequencies do not penetrate a conductor (or the earth in the case of an AM band ground wave) as deeply as do the lower frequencies. Try to visualize the signal being conducted via a narrow conductor vs. a thicker one, which is essentially the case.

684. Wing TV versus Alex Jones.

Newsgroup: rec.radio.shortwave
Date: 2005-05-06 23:52:56 UTC
From: "&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com>
Message-ID: <Xns964ECA4118E51TheDoctorisin@216.168.3.44>
Source record: 21267

http://69.28.73.17/

John Stadtmiller alluded to it on his show, at least in the second hour. Wing TV seems to be accusing Alex of censoring his archived shows, apparently to preclude Wing TV or some such entity of being able to advertise their offering, ostensibly through the information supplied by a caller to Alex's show.

Wing TV is expressing incredulity that Alex claims that he is "concerned" about the state of things in the U.S., yet his shows seem to be entirely about his products.

Oh the vagaries of Patriot Shortwave Radio show Hosts!

Regards,

Dr. Artaud

Many of these are not "expert" opinions nor are they based on absolute performance. A lot has to do with the price of the radio for the performance (bang for the buck), and in general how happy these people are with their radio in the real world. I find these reviews valuable, but you have to understand what they are.

I disagree. A DX-160 with a good antenna is a very fine radio; particularly sensitive and able to hear things that a lot of lesser radios can't. It was and still is a very popular radio, due to its performance. It doesn't compare to more modern top-of-the line radios, but for $60 there probably isn't a better radio or one that is more fun to cruise the bands with.

No, it's all related to conductivity, as David Eduardo suggests. The graphs show that the 5000mmho sea-water conductivity is very nearly the same as the ideal inverse-km line, but slightly more divergent at the higher frequency. The less conductivity, per the graph, the more distinctly superior a watt at 540 is over the same power at 1600. As conductivity is a resistance measurement, the issue is that a path with less conductivity results in more losses in the radiated wave, attenuating it more at the higher frequencies. The greater attenuation, however, probably relates to the laws of physics in the same way as electromagnetis spectra work at the higher frequencies....at high UHF, for example, it's the size of the molecules in the air that attentuate the higher frequencies more than the lower. At MW frequencies, this effect is exacted by the size of the earth (which also is the reason why groundwaves go over-the-horizon, as it's the earth which diffracts the wavefront).

Thanks for all of the reply's. I've just got an email from the seller
and it should be here by Monday. Can't wait to get it and check it
out. All the reviews that I've read on the DX-160 have been good.
Hope to be able to pick up WBCQ down here in Louisiana.

Once again thanks for the reply's

Johnnie

Hi I am a long time lurker here, about 6 yrs. I just picked this radio up at an antique/junk shop for $45. It has way more dodads than my old Halicrafters Sky Champion. I cant seem to get the fm/vhf to come on. the freq, display stays in hf mode. If you push the vhf button, it reads vhf freqs and beeps for a second, then goes right back to shortwave. Am I doing something wrong or is the radio defective in vhf mode. I didn't get a manual with it so I'm flying blind playing with this radio. Any help would be helpfull. Thankyou in advance. Dan

He's trying to avoid our killfiles. I understand that he has some serious issues with having been led astray by Maoist ideology, and that he wants to get revenge, but he should do it someplace else. I've noticed that same feature with a LOT of people who have been members of cults, either religious or political, and then who have seen the light and bailed out-they have lots of anger towards the cult, they're very angry people in general, and they feel a need to get revenge against the cult by spreading their "warnings" far and wide. I understand that many of them have wasted significant chunks of their lives in servitude to a false religion (including such political ideologies as Communism and Nazism) and that they feel cheated by the cult and want revenge, but they should focus on the future instead of the past-they're out, they're free, they should move on and try to make their remaining time on earth the best that it can be instead of letting themselves be consumed by hate. So many of these people are so hateful that the cult they escaped still has control over them.

Clue: one side of the manual that came with the radio (if you bought it from Liypn) is English, the other side Chinese. Simply flip it over. If you're looking at Chinese, flip over the manual and you will be reading English. The same holds true for the box, if you still have it-the lid is in Chinese, but the back is in English. Yes, it is a nice radio, despite what Li says. Mine mostly gathers dust nowadays, since a lot of my "regulars" aren't that strong here anymore. But since you're mostly using it to listen to US domestic stations, it is excellent for that. I mainly used plain old alkaline batteries with mine, since I didn't want to go through the hassle of charging the Degen batteries.

OK, out of six reviews one person mentioned the same complaint I have
with the sync losing lock on rapidly fading signals so I can't agree
with your friends statement that the sync is not that good. The sync is
very good other than that one performance problem.

They're as bad as the American Socialists-lots of talk about defeating the wicked elite, but most of their energy is devoted to attacking each other. The thing is, the Spartacists (aka "Jimstown"), the International Socialist Organization, the Revolutionary Communist Party (they're Maoists, too bad there aren't any peasants in the US), the Workers World Party, and a half dozen others, can't buy time on SW-they don't even have that little amount of money. Mostly they battle it out in small newsletters. If you go to a left wing protest in a big city such as San Francisco or New York, you can pick up any number of these newsletters. They make for amusing reading. The WWP is behind International ANSWER (Act Now, Stop War, End Racism) and the National People's Campaign, while the ISO has a very distinct protest sign typeface that makes their protestors stand out in a crowd if you know what to look for. It's a whole little surreal subculture cut off from reality and stuck on one note, sort of like the leftist version of the Patriots.

I see that ALL of Libya's broadcasts are via France, probably from the
RFI tx's. The French backed up Saddam Hussein, another US foe, too, to
the point of blocking the UN resolution to go to war. Maybe Bush should
lean on Chirac to stop supporting terrorists, or be considered a
terrorist? Either you are with us or with the terrorists, remember?
Maybe we should invade France next.

Some outboard devices need the discriminator output which is before
the de-emphasis network which has a flat frequency response. Same as
when the VideoChiper II was added to Sat-TV. There was about a half
dozen approved receivers and pages of "Can not be converted" receivers
for CATV headend use. It didn't stop me from converting all our
Collins-Rockwell receivers to work with VideoChiper. :-)

VERY WELL SAID Dr. Artaud.

There has NEVER BEEN nor will there EVER BE any
sense of honor on shortwave 'pay'-triot radio. All of it is
a forum for shysters and/or mental patients who need a trip to
the nearest rubber room. If they ain't in it PURELY for the
money, they they are likely in it to stir up the crapola among the
moe-rons who believe their brand of paranoid bullshi+ and
sell them something later. (usually overpriced gold nusmismatic
coins, freeze dried foods or radios that have a wind-up crank
on the side of them....how f-n pathetic).

It's just as simple as that.

Sir, I am deeply offended. Fun? No, just the opposite. It's been drudgery of the worst sort. We have been providing a public service by exposing the dark and sinister side of a segment of humanity gone insane. Bestiality running rampant amongst the 'hard of thinking' set, is hardly a 'Fun' topic. Depravity cheapens us all, even in Mississippi, although it's barely noticeable there.

actually I get my best opinions from ebay. :)

the sellers there tell me how rare a radio is and how well it compares to
radios they are not selling

I preferred Gabereaux on the radio. She's one smart cookie. Gzowski? He should be nominated for broadcast sainthood. Now, one of them is dead and the other's on TV. I wonder if they talk...

Ditto. I have Yuasa NP7-12 gel cells that I pull from my electric gate (where failure is not an option) and use them in the field. Gel cells don't tolerate overcharge very well, so you might want to float charge them with a power supply rather than some generic battery charger.

Cuhulin, or more properly Cuchulainn was an Irish hero, featured
prominently in the Tï¿½in Bï¿½ Cuailgne. The name itself is actually a
nickname of sorts and stands for the Hound of Culainn. Cuchulainn 's
real name was Setana, and as a boy he killed the dog of a nobleman
named Culainn. As punishment he had to serve as that lord's dog for a
year, which was the time it took to train a replacement. As a result
of this servitude he was calleed Cuchulainn there after.

Radar trial to watch Torres Strait

http://australianit.news.com.au/articles/0,7204,15188123%5E15321%5E%5Enbv%5E15306,00.html

MAY 05, 2005

A NEW radar surveillance system to boost protection against drugs, disease, illegal immigration and fishing is being trialled in Torres Strait.

Defence Minister Robert Hill and Justice and Customs Minister Chris Ellison said the new over-the-horizon high frequency surface wave radar (HFSWR) would allow defence and Coastwatch to better monitor Australia's northern coastline, particularly the Torres Strait area. The strait is sensitive because of its closeness to Papua New Guinea.

Senator Ellison flew to north Queensland today for the handover of the $23 million radar by contractor Daronmont Technologies. He said the trial would run for two to three years to evaluate the surveillance potential of the radar.
HFSWR can detect surface vessels and low-flying aircraft beyond the visible horizon, unlike conventional radars which are limited to line-of-sight operations.

"This technology has the potential to deliver 24-hour wide-area coastal surveillance of aircraft, ships and boats travelling in the Torres Strait," he said in a statement. "It also has the potential to provide early storm warnings and to protect offshore oil and gas installations, if further developed and deployed."

The ceremony was attended by Torres Strait community representatives and executives from Daronmont Technologies.
The project required an Indigenous Land Use Agreement (ILUA) under the 1998 Native Title Act in 1998.

Senator Hill and Senator Ellison signed ILUAs with the Dauan and Badu Island communities in February 2004, allowing construction of the radar facilities on the two Torres Strait Islands. A 440m-long receiver array is on Dauan Island in the northern Torres Strait and the transmitter is on the uninhabited Koey Ngurtai (Pumpkin) island, north of Badu Island in the middle of Torres Strait. The HFSWR technology was developed by the Defence Science and Technology Organisation (DSTO).

Daronmont Technologies is a wholly Australian-owned enterprise specialising in design, engineering, integration and support of complex high technology electronics systems. Opposition defence and homeland security spokesman Robert McClelland said while Daronmont and DSTO were to be commended for

their work, there was still more for the government to do on border protection and stopping illegal fishing. AAP

The radios listed below are for sale or will trade both radios for handheld scanner - Pro 95 preferred but all offers considered. Prices include UPS ground shipping within the continental US.

Degen DE1102 - In excellent shape. Less than 3 months old. This is a small, compact, full coverage, radio. Comes with all original accesories - manual, cloth carrying case, rechargable NIMH batteries, and 220V AC adapter. Batteries can be recharged inside the radio. Some of the features of this radio - 190 programable memories, ssb coverage, Wide and Narrow filers, FM bass boost. A review of this radio can be found at:

http://www.radiointel.com/review-degende1102.htm

Price - $50

Tecsun PL 350. Tecsun's newest radio. Less than a month old. In excellent shape. Comes with all original accesories - manual, cloth carrying case, rechargable NIMH batteries, and 220V AC adapter. Batteries can be recharged inside the radio. This radio has 550 memories, antenna trimmer, selectable IF frequencies - 455 or 450 KHz for AM and SW. Very nice compact SW radio. A review of this radio can be found at:

http://www.radiointel.com/review-tecsunpl350.htm

Price - $50.

I'll sell both radios as a package for $90.

What I do find very interesting about this is that the seller obviously set a very high reserve to begin with, which has not yet been met.

Seems to me that in the last year or so R7's were selling for $800 or so let's say and R7A's commanded the over $1000 price.

I did see an ad on rec.radio.swap for some Drake gear which included an R7 so I emailed the guy and he told me he was asking $1195 for it with 3 filters and the NB, which I considered to be over priced.

Guess we'll see in another day or so if this particular one sells outright or whether he might approach the high bidder.

Hi guys

Check out this ad.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=40066&item=5772406534&rd=1
He claims it's brand new in the ad. BUT, when a interested party asked him
for some real pictures and a serial number, he says he doesn't have one.
That he has to "order" it first, then it will take "3 months" to get it.

He has zero feedback and expects a buyer to wait 3 months for their radio :)
He doesn't tell you this in the ad.
I guess after 3 months your credit card company can't do a thing. Amazing. I
think this guy should be reported. What do you think?

Lucky

The Sunday Times - Britain

May 01, 2005

The secret Downing Street memo

SECRET AND STRICTLY PERSONAL - UK EYES ONLY

(Note: The London Times is owned by the same people who own Fox News. This is not some wild-eyed ''liberal'' publication).

DAVID MANNING
From: Matthew Rycroft
Date: 23 July 2002
S 195 /02

cc: Defence Secretary, Foreign Secretary, Attorney-General, Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C, Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right,

people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam.

He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers.

(I have written separately to commission this follow-up work.)

MATTHEW RYCROFT

(Rycroft was a Downing Street foreign policy aide)

The good side of all of this is that Saddam is gone... the bad side is that
David Rickets still runs free.

All militia units should proceed immediately to apprehend David Rickets.

"Lucky" <lucky@TheBotStopsHere.com> wrote in
news:117pe42rbtfrq72@corp.supernews.com:

Funny guy this e-bay seller. As you said, the picture isn't even real,
obviously cut and pasted from an ad AND he wants you to wait three months
for the item.

"Q: Do u have pictures of actual radio? Also, please provide serial
number
A: This is a highly specialized radio, and I need to make factory
order on this item. Once the item is manufactured (which can take up to
3months including...more"

This morning I received my usual 2 or 3 e-mails from someone in Europe,
or Africa, or elsewhere, asking for me to help them conceal $30,000,000
by securing it in my banking account, of course I need to give them my
account number so that they can transfer the funds. They will give me a
percentage of it if I help. Obviously they are bogus claims, yet I wonder
why they are so prevalent in terms of spam, does anyone actually believe
these claims? Can anyone be that stupid?

Same with the e-bay listing, though one is tempted to write to e-bay, can
anyone be so stupid to pay that amount to a seller with 0 sales with a
listed item that consists of a picture cut and pasted from an ad and with
the stipulation that you would need to wait for 3 months for the item?

Should the world even endeavor to protect such a stupid individual? I
guess a rich spouse, not knowing better, wishing to surprise their loved
one might be gullible enough, but I hope not.

e-bay should remove the listing.

I think ONE THING could have been better even though I haven't used it yet. The "line out" plug is also the head phones plug. The manual tells us that changing the volume WILL affect this. What it seems to amount to is could have been accomplished with a splitter. I prefer what the Sony 7600, and many others, has - TWO separate plugs. The one for headphones IS affected by the volume control and the "line out" plug IS NOT affected by the volume control. You *could* be listening and recording at the same time and the "ambient" noise could change so you had to change your volume. You'd probably want the recording to be constant. This is only a problem if the 1102 is your only radio.

Nothing wrong, it is just looking and not finding the VC20 vhf board.
Not many of them were purchased new because they were quite limited in
frequency coverage. Their relative rarity means prices are well beyond
what you could get a used full coverage scanner for.

They've had them for quite a while. There's a really big one in
their northern outback. "Jindalee" is what the location sounds like,
I don't remember how it's spelled in print.

For that matter, Raytheon has one for sale, developed for the
Canadians. The web page says it can detect a jet ski from a couple
of hundred kilometers.

Item WAS there in the last hour and a half ago. I sent the seller a message stating that the item was available from Universal Radio for $10,449.90.

Probably pulled it!

HPGrn <majorret310@nospam.yahoo.com> wrote in
news:r5rp711fquspo4vdno3ej99d3sdr9rhti8@4ax.com:

That was quick. Normally I don't believe in protecting people from themselves, but this auction was so outlandish. If someone were to sell a Sony 7600GR, and have an asking price of $300, so be it. But when someone likely posts a imaginary ad giving the unscrupulous individual time to flee with the booty, e-bay should step in.

I wonder who and how many people reported it, and what assessment that e-bay uses to cancel auctions, i.e. do they investigate or rely on the opinions of buyers? It was fairly damning that this was the sellers first auction.

I guess that it may have been an individual similar to those that buy houses, fixes them up, and turns them around for a quick profit. You could offer the item, receive the money, then order it drop shipped to the buyer. This would not be as unethical as taking the money and running, and I believe would be part of fairly normal selling practices.

Caveat Emptor. (http://www.bartleby.com/61/50/C0175000.html)

<Ronald700138@yahoo.com> wrote in message
news:1115407650.290705.218470@g14g2000cwa.googlegroups.com...

This is the most important question of your life.

The question is: Are you saved?

It is not a question of how good you are,
nor if you are a church member, but are you saved?

Are you sure you will go to Heaven when you die?

The reason some people don't know for sure if they
are going to Heaven when they die is because they
just don't know.

The good news is that you can know for sure that
you are going to Heaven.

The Holy Bible describes Heaven as a beautiful
place with no death, sorrow, sickness or pain.

God tells us in the Holy Bible how simple it is
to be saved so that we can live forever with Him
in Heaven.

"For if you confess with your mouth Jesus is Lord
and believe in your heart that God raised Him from
the dead, you WILL BE SAVED." (Romans 10:9)

Over 2000 years ago God came from Heaven to earth
in the person of Jesus Christ to shed His blood
and die on a cross to pay our sin debt in full.

Jesus Christ was born in Israel supernaturally to
a virgin Jewish woman named Mary and lived a sinless
life for thirty-three years.

At the age of thirty-three Jesus was scourged and
had a crown of thorns pressed onto His head then
Jesus was crucified.

Three days after Jesus died on a cross and was placed in a grave Jesus rose from the dead as Jesus said would happen before Jesus died.

If someone tells you that they are going to die and then three days later come back to life and it actually happens then this person must be the real deal.

Jesus Christ is the only person that ever lived a perfect sinless life.

This is why Jesus is able to cover our sins(misdeeds) with His own blood because Jesus is sinless.

The Holy Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you would like God to forgive you of your past, present and future sins just ask Jesus Christ to be your Lord and Saviour.

It doesn't matter how old you are or how many bad things that you have done in your life including lying and stealing all the way up to murder.

Just pray the prayer below with your mouth and mean it from your heart and God will hear you and save you.

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven with You when I die. I agree with You that I am a sinner. I believe that You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins and that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thanks Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

Welcome to the family of God if you just allowed God to save you.

Now you are a real Christian and you can know for sure that you will live in Heaven forever when this life comes to an end.

As a child of God we are to avoid sin(wrongdoing), but if you do sin the Holy Bible says, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One."

Those of you that have not yet decided to place your trust in the Lord Jesus Christ may never get another chance to do so because you do not know when you will die.

Jesus said, "I am the way, the truth and the life: no one can come to the Father(God)(in Heaven), but by me." (John 14:6)

This means that if you die without trusting in Jesus Christ as your Lord and Saviour you will die in your sins and be forever separated from the love of God in a place called Hell.

The Holy Bible descibes Hell as a place of eternal torment, suffering, pain and agony for all those who have rejected Jesus Christ.

The good news is that you can avoid Hell by allowing Jesus Christ to save you today. Only then will you have true peace in your life knowing that no matter what happens you are on your way to Heaven.

Praise the Lord!
Servant of the Lord Jesus Christ

Sounds like an E-Bay entrepreneur. Doesn't really care which model, just radios collectively.

Radios, if one can obtain the right models, can indeed yield a healthy return for your investment. I was given a radio, the receiver side of a tube HAM set, by an individual at work. I sold it, along with some other items, to a local business that specializes in e-bay auctioning.

Oh woe is me, as he received, for just the receiver, at least twice as much as he paid me for the entire lot. That's the way business goes. If I began e-baying, and had zero sales, I doubt that the buyers would have trusted me enough to have paid they price that they did. The seller has 1500 or more sales with a 98% satisfaction rate.

> ILG has updated their database and I've downloaded it at1640 UTC
>

I have also downloaded them as well. For those of us not familiar with the ILG Database, please note that you must register to be given a user name and password prior to downloading. It came as a shock when I saw the e-mail today, as I had forgotten about it. Fortunately, I had minimal junk e-mail today, or else I may have inadvertently deleted it.

http://www.ilgradio.com/ilg-order.htm

"We are very busy to update current Summer 2005 edition. Next ILGRadio database and passwords will be available at the beginning of May. There are several thousand requests which must be answered...
Don&#65533;t request ILGRadio Password more than 1 Time. Multi-requests will be answered at last...

" ILGRadio database is available for those who are using ILGRadio files for non-commercial purposes
" Passwords for ILGRadio are not available for those who are using a freemail (freemailer) e-mail address
(e.g. hotmail, yahoo, mail.com, exite, altavista, bigfoot, iname, lycos, netscape, usa.com, email.com, hotbot, freeserve.com, gmx, web.de, freenet.de, ...)"

The database information can be opened in HAM Radio Deluxe (there are other methods to use the database as well). Apparently HAM Radio Deluxe uses the text version of the database, as there are other forms available.

I had to use the 2C option below.

http://www.ilgradio.com/

http://www.ilgradio.com/ilgradio.htm

Short Wave - Data Files (Standard)

2a) ILGRadio Short Wave Database for ILGRadio software in dBASE IV Format (with DOS Graphics):

2b) ILGRadio Short Wave Database for importing into MS Access, MS Excel, Paradox, Star Office and others in the dBASE IV Format (without DOS Graphics):

2c) ILGRadio Short Wave Database for Linux, ... in the
pure TEXT Format (without separators):

Software related links from ILG.

http://www.ilgradio.com/ilg-adsoftware.htm

Installation of DAO
----

1) The package consists of 3 files:
- DaoDisk1.exe
- DaoDisk2.exe
- DaoDisk3.exe

2) Copy these 3 files into an empty directory and
run each exe. This will produce 3 directories:
- directory "Disk1"
- directory "Disk2"
- directory "Disk3"

3) Enter the directory "Disk1" and run "setup.exe".

4) When you are asked which options you want to install,
you may either
- leave all settings as they are
or in order to save same disk space you may
- proceed as follows:
- In the first dialog:
- Check "Jet3.5"
- Uncheck "ODBCDirect"
- In the second dialog:
- Check "Excel"
- Check "Paradox"
- Check "XBase"
- Check "Text and HTML"
- Uncheck "Lotus"
- Uncheck "Exchange"

5) Finish the installation.

6) You may now delete the original directory and all
directories and files contained in this directory.

So what? If China wants to make knockoffs of US and European cars, then that's their business.

One of the first lessons I learned in radio many years ago is that there are no original ideas. Truly creative people can reverse engineer a product and make it even better or produce it for less money. Here in the US, we have our own copyright laws. In China, they have their own legal system. If they want to make what we consider illegal copies, then that's up to them. And while I am glad I live in the US, I don't agree with the greedy attorneys of the RIAA and MPAA who go way too far enforcing US copyright laws without being able to view fair use through common sense-colored glasses once in a while.

When I was a teenager, I bought a Sony TR-620, a little MW transistor radio made in about 1961, for 50 cents at a flea market. Six years later I sold it in an antique radio magazine classified ad for $80. I didn't do anything special to it, I didn't restore it, I didn't mess with it. This was long before Ebay, in fact still when few people had the internet, most people put their phone numbers in their ads and you had to pay long distance charges to call them. Unfortunately, ever since the advent of Ebay, great deals like that are increasingly hard to find. I noted to a friend today that one rarely sees radios, either tube or transistor, in antique stores nowadays. When I was a teenager in the early 90s radios were plentiful. I think that most of the tube radios and probably most of the pre-1963 transistor radios that are out there have been spoken for. I suppose there's still some baby boomers holding on to "my first radio", and as they die there will be a wave of 1950s transistor radios hitting the market, but other than that most of the radios are stashed away in collections. Finding a 1930s tube radio in some old forgotten barn somewhere is rare nowadays, IMO. It's about the same odds as finding an Edsel in that barn, or a Stradivarius violin. In fact, I saw a website a few years ago that said that the chances of finding an undiscovered pre WW2 TV set, of either US or UK manufacture, is about the same as finding an undiscovered Stradivarius violin.

Dunno, but something has been making a racket across the bottom edge of 40m
for a couple of months now. It runs at random times and I have heard it from
several locations separated by several hundred kilometres.
Damn nuisance if it is the OTHR, but then, it's only the CW segment of 40m.
Who will miss it? ;-)

Since v3.5 is not the current version, they may or may not be still
available from microsoft.com, but you can get them at
http://www.ilgradio.com/gnpdb/gnpdb.html
with the rest of the gnpdb software.

THANK YOU!!!!!!! But still have a prob, when I go to install the
files, it says another application is currently using DAO
files........I unloaded everything I could but still no go..I am
running windows 2000 pro... any ideas as to what is running in the
background?? Do I already have it installed? If so, why does the ILG
not work?

Steve

This may be the answer. He IS an alien, from the planet "Tard Boy". A
stupid, uneducated, retarded one. Mentally ill. A pathetic excuse for a
life form. If he wasn't so utterly repellent, he'd be pitiful.

running dogg <run@ning.dog> wrote in news:427d552a$1_1@127.0.0.1:

I haven't done them, but estate sales are probably the best way to garner interesting items. Older people, upon passing, may have kept items hoarded away, either for their keepsake value, or simply since people from harder times valued their possessions more, even if they fell into disuse. Also, as a telling sign to modern quality, things made years ago tended to last a long time. Manufacturers actually believed that people wanted quality.

As soon as anyone gets hold of an item that they realize will sell on e-bay for a good sum, there is little chance of seeing these items locally. Near the area that I live, as little as 15 years ago, a friend was walking down the sidewalk early one morning. Protruding from the curbside garbage can from a residence was a rifle. My friend removed the rifle, knocked, and an old woman came to the door. She had thrown the gun away, apparently it was her now deceased husband's, she had no use for it. He asked permission to take it, even though it was officially trash anyway, and she readily agreed. It's not like it was an AR-15 or something like that, it was a 30-30. But it was worth something, especially more so than scrap. (never mind the implications of a child getting hold of the rifle, she was old and probably didn't understand the ramifications of what she had done).

Every once in a while, I see someone at work that gets a fantastic deal on a car from a widow or simply a neighbor that wants to get rid of their car, perhaps they are in bad health. The amount that they pay is ludicrously low compared to what the car is really worth. Certainly there are HAMs and SWLers wives out their that don't know what to do with their departed hubby's equipment. If I were buying the item for myself, even if the price is below market, I wouldn't feel too guilty, but I would be guilt ridden if I habitually bought items for resale at significantly greater prices. I do realize that business is business, perhaps that is why I am not a lawyer or businessman.

Dunno, but something has been making a racket across the bottom edge of
40m
for a couple of months now. It runs at random times and I have heard it
from
several locations separated by several hundred kilometres.
Damn nuisance if it is the OTHR, but then, it's only the CW segment of
40m.
Who will miss it? ;-)

Brad VK2QQ

****

Hi Brad. if your old enough to remember the "Russia Woodpecker"; you
would
remember the sound. i believe it was back in the 70s. can't recall the
freqs,
but, it played hell for a few years. i'll have to check out the cw
segment
of 40m...

I remember the Russian Woodpecker all too well. It would clobber a lump of spectrum several hundred kHz wide and be S9 or greater for hours. It also followed the propagation and was a nuisance from 40m to 10m. The Jindalee OTHR has a different signature and keeps away from the various ham and commercial frequencies, which is very considerate of them. I think the new one has a much faster pulse rate than the old Russian one.

Perhaps one cares enough about advancing the idea of not caring, such that one decides to post publicly that one does not care - in the hope that others will be deterred from emulating the undesired posting behavior.

I am using a Eavesdropper/C antenna from Antenna Supermarket, hung between a tree and one of the chimney towers on the side of the house. At times during the year some of the branches of surrounding trees grow long enough that the leaves and/or the branch touch one or more of the wires between traps. Can this grounding effect significantly impact reception effectiveness?

All right... this is ridiculous... BEYOND ridiculous.

From the website of WFIE-TV Evansville, IN

The minister of a Haywood County, North Carolina Baptist church is telling members of his congregation that if they're Democrats, they either need to find another place of worship or support President Bush.

Already, the Reverend Chan Chandler has ex-communicated nine members of East Waynesville Baptist Church. Another 40 members have left in protest. During last Sunday's sermon, he acknowledged that church members were upset because he named people, and he says he'll do it again because he has to according to the word of God.

Chandler could not be reached for comment Friday, but says his actions weren't politically motivated. One former church member says Chandler told some of the members that if they didn't support George Bush, they needed to resign their positions and get out of the church, or go to the altar, repent and agree to vote for Bush.

A former church treasurer says she's at church to worship God and not the preacher.

Ignore Li. He has a pathological hatred of Communism. He's so hateful
that he can't think straight. Yes, Communism is evil, but China is more
capitalist than communist, in fact it's increasingly becoming like
Singapore with a thriving capitalist economy and a repressive political
system. Yet I don't see Li trashing Singapore, just China. For better or
worse, China is a major economic power, and a big reason for that is
that they can beat the West at our own game. They make electronics,
refridgerators, and toys cheaper and better than the West, and once they
get up to speed in cars they'll take market share away from the
Japanese. But Li is so obsessed with his hatred of the CCP that he can't
deal with reality.

I've done a few small estate sales, and mostly the old people gave away
the really good stuff during their lifetimes and kept all the
knickknacks. It's true that most Depression children valued treasured
items more than the generations who came after them, but some had
strange (to us) notions of what they treasured. My grandparents have a
beautiful Art Deco cake mixer made by Montgomery Ward still on their
counter and neatly covered and dusted even though it likely hasn't been
used since my mother was a girl. They hardly have anything else old and
interesting left. My grandfather once had sheds full of radios (he
repaired them) but gave them away the year before I was born (1974). Yet
he kept tons of nonprecious rock used to make tourist jewelry for 35
years. A man down the street had a 1950s console TV/radio (AM-FM)/phono
in decent shape in a shed. His kids threw it out in the street. By the
time I got to it, it had been gutted of electronics and the cabinet
left. Later I saw a Mexican hacking up the cabinet with an ax for
firewood.

> why I am not a lawyer or businessman.

Hell, I know people who buy rundown homes from people in distress and
then turn around and resell them to fixer uppers who pay much, much more
than the house is worth in its current shape, and then fix it and sell
it to an investor who turns around and rents it to a bunch of lowlifes
who trash it. I tried doing that, and even though I was assured by the
"investors" that it was fine, it still left a bad taste in my mouth.
Maybe that's why I'm learning a trade and plan to start a business by
providing a service instead of trying to buy low and sell high. I've
bought radios from old people who say "I can't take this treasured
keepsake to the pearly gates" and I was fine with it because I was
buying it for my own personal enjoyment. But I wouldn't turn around and
sell it on ebay.

802. Defusing a Nuclear Nightmare

Newsgroup: rec.radio.shortwave
Date: 2005-05-08 03:02:03 UTC

FYI

Defusing a Nuclear Nightmare PDF
Playthell Benjamin

After the successful exploding of the first atomic bomb in the desert of New Mexico - where scientists working on the super secret ï¿½Manhattan Projectï¿½ based at the Los Alamos weapons laboratory had produced this technological monster - Dr. Albert Einstein, the worldï¿½s most distinguished scientist, observed that everything in the world had changedï¿½except the character of human beings.

This was a chilling revelation, because it meant that the same flawed, ego-driven homo sapiens that had waged countless wars inspired by greed, land hunger and the will to power, now had the power to destroy the world. Which means that a psychology which was sufficient for human survival when we were fighting with bows and arrows, or muskets and cannons, or even tanks, airplanes, and battleships, would no longer be sufficient to insure the survival of human beings in the atomic age.

Von Clauswitzï¿½s legendary laws of war no longer applied, because he saw war as an extension of politics, and politics is the art of the possible. Now the supreme enemy became war itself, because a war between nuclear powers will yield no winners. Thus victory in atomic warfare is impossible!

The decision of the US government to use atomic weapons against the Japanese in 1945, the greatest assault on a civilian population in history ï¿½ 9/11 pales in comparison.

ï¿½ It was a deadly manifestation of the arrogance of American power, and speaks poignantly to Dr. Einsteinï¿½s warning 60 years ago. Dropping the Atomic bomb on Japan set off a nuclear arms race that is cause for great anxiety all over the world today.

Most Americans however are in denial, and I believe this is because the consequences of nuclear war are so frightening that they just tune it out and simply refuse to inform themselves on the subject.

This willful ignorance explains why the peoples who reside in the nations that stockpile atomic weapons donï¿½t take to the streets en-masse in protracted demonstrations demanding that their governments

take the lead in banning the bomb.

And there is no population that bears a greater responsibility for petitioning their government to lead the world in nuclear disarmament than the citizens of the United States!

This historical responsibility falls squarely upon us because the nuclear menace that imperils the fate of the earth is wholly an American invention ï¿½ as was germ warfare when American scientists first weaponized germs at Fort Dietrich. I feel the responsibility to fight for nuclear disarmament acutely, because I once served in the Strategic Air Command, which was, at the time, Americaï¿½s premiere nuclear strike force.

Therefore I have a thorough knowledge of the unimaginable horrors nuclear war will bring. Assigned to Combat Defense and given a ï¿½Top Secretï¿½ security clearance, I became a member of the force whose mission was the physical defense of the Strategic Air command base to which I was stationed.

Always heavily armed, our duties consisted of physically securing the Atomic weapons stockpiles from which we armed the bombers, the bombers themselves, and manning and securing the complex electronic systems in Central Security Control, the command center from which a world-wide alert to Americaï¿½s nuclear forces could originate or be received.

The Mission of our base, which was located on the ï¿½DEW,ï¿½ or Distance Early Warning Line,ï¿½ up on the Canadian Border, was the nuclear annihilation of the Soviet Union. Then we were using manned bombers to deliver the payload, today the world can be turned into burned out radio active pile of rubble within half an hour from now.

So unlike those who have buried their heads in the sand, I know too much to hide. I am ever aware of the disasters that lurk on the nuclear horizon.

I have no doubt that the automatons who are trained to push the buttons will launch on command; I know there was a time when I would have. They have been well trained to perform this doomï¿½s day task. I was in the Strategic Air Command when it was a led by General Curtis LeMay, who served as a model for the crackpot ï¿½General Jack T. Ripper,ï¿½ who starts a nuclear war in the frightening classic movie ï¿½Dr. Strangelove:

How I Came to Love the Bomb.ï¿½ It was a paranoid existence, because they had us thinking that Russian spies and saboteurs were everywhere. I was young and dumb, had grown up with atomic bomb drills, was highly patriotic the way southerners tend to be, and thus I didnï¿½t question anything they told us ï¿½ at first!

By convincing us that we were in imminent danger of being overrun by the evil communists ï¿½ aided by a poster of a menacing looking Russian leader, Nikita Khrushchev, pointing his finger straight at you from

all angles, with the caption ï¿½We will bury you!ï¿½ ï¿½ our officers convincingly indoctrinated us into the belief that a nuclear attack on the Soviet Union was a reasonable thing to contemplate.

But once I began to attend classes about the destructive power of the nuclear payloads carried by the B-52 bombers on the base ï¿½ which the instructors proudly pointed out made the unspeakably horrible bombs our nation dropped on Japan look like mere firecrackers ï¿½ I began to strongly suspect that the whole thing was madness, especially since they had previously shown us official Strategic Air Command films of the destruction of Hiroshima and Nagasaki.

Over four decades later I still think itï¿½s madness! I also think that it is up to us, the enlightened American citizenry, to elect a government with a mandate to lead the world in a great awakening that will put an end to this madness before itï¿½s too late. That is the greatest honor we can pay to the people of Hiroshima and Nagasaki, who became guinea pigs for an American experiment with atomic weapons.

Anyone who is naï¿½ve enough to believe that race had nothing to do with it, that it made no difference that the Japanese were Asians rather than Europeans, should hurry up and read Dr. Gerald Horneï¿½s recent book on the war for control of the Pacific, ï¿½Race War!ï¿½

One of our finest contemporary historians, Professor Horne presents voluminous evidence regarding the terror white Americans felt at the rising power of colored Japan in a world dominated by nations committed to ï¿½white supremacy,

ï¿½ especially the Anglo-Saxons of Briton and the United States. Consulting official government documents, newspaper clippings, and personal papers of important government officials, Horne recounts white Americaï¿½s hysteria at signs of a growing diplomatic relationship between Japan and Mexico ï¿½ a country the Anglos had repeatedly bullied and robbed.

In numerous statements white Americans made it abundantly clear that they would not tolerate a military alliance between these two ï¿½coloredï¿½ nations. And Dr. Horne meticulously documents the fact that the Japanese certainly saw their participation in World War II as a struggle against white supremacy!

Whatever the official lip service given to racial equality in Americaï¿½s anti-Nazi propaganda ï¿½ which led many white Americans, but by no means all, to root for Joe Louis against the German boxer Max Schmeling - the real U.S. position on the question of racial equality between the worldï¿½s races is summed up in a candid quote from President Harry Truman. ï¿½I think one man is as good as another so long as he is honest and decent and not a nigger or a Chinaman.

Uncle Willï¿½does hate Chinese and Japs. So do I. It is race prejudice I guess. But I am strongly of the opinion that Negroes ought to be in Africa, yellow men in Asia, and white men in Europe and

America.ï¿½ Remember, this is the man who gave the command to drop the atomic bomb on Japan!

And even he was forced to restrain the rage of General Douglass McArthur, who wanted to use nuclear weapons against China when the war in Korea was going badly several years later.

Hear! Hear! mon frere!

Thus there is no more ridiculous spectacle in the world today than the hysterical cries of the Bush Administration railing against Iran or North Korea who may be building a bomb or two, while the American nuclear arsenal houses thousands of nuclear bombs, and our military has the ability to strike targets with precision anywhere in the world within minutes.

And they have demonstrated their willingness to use them against non-Europeans. This awesome power was designed to blackmail the rest of the world into submission to Americaï¿½s will, particularly the ï¿½Third World.ï¿½

In a typical example of white American hubris, the architects of this policy of nuclear intimidation never imagined that nuclear technology would spread to other nations in the world and come back to haunt us. But it has. And whatï¿½s more those of us who live in major cities must now worry about somebody planting one of those fifteen suitcase nukes that are missing from the Russian arsenal.

Those who built and deployed atomic weapons against Japan, along with their apologists, have always argued that this was a noble act, a necessity of war. While an argument can certainly be made for building the bomb, mainly the warnings from ï¿½migrï¿½ European scientists like Dr. Einstein that the Germans were on the way to discovering the secrets of atomic fission, the justification for bombing Japan is another matter entirely.

As far as I am concerned the slightest possibility that Adolph Hitler could have acquired the bomb first was reason enough for Americans to build the bomb. But given what we now know about what America and her allies knew regarding the condition of Japan in 1945, and the willingness of Americaï¿½s Russian allies to invade Japan with her armies stationed in China, the evidence clearly shows that Trumanï¿½s alibi that he dropped the bomb on Japan in order to spare the lives of American soldiers is a self-serving lie!

There is compelling evidence that Trumanï¿½s closest advisors had ruled out other avenues to peace, against the advice of more level headed

professional analysts in the military and State Department. The
breadth and gravitas of this evidence is beyond the scope of this
commentary, but a search on Google.com will reveal a wealth of
information on this subject, providing compelling evidence of Trumanï¿½s
criminal folly.

But now, in some strange cosmic turn of fate, the threat of nuclear
annihilation hangs over our heads, and weï¿½ve got a pugnacious
ignoramus in the White House who is trying to destroy the few
safeguards that presently exist against accidental nuclear holocaust,
by unilaterally abrogating the ABM Treaty and openly proposing to
manufacture tactical nuclear bombs for use in risky military conflicts
where American forces could suffer great casualties ï¿½ such as a land
war in Asia.

But isnï¿½t that the same rationale Truman used to drop atomic bombs on
the people of Hiroshima and Nagasaki? No wonder the North Koreans are
nervous and feel that they must build their own nuclear arsenal as
deterrence to American aggression.

Furthermore Condoleezza Rice, AKA ï¿½Madam Hawk,ï¿½ and the neo-con gangï¿½s
insistence that American scientists be permitted to inspect top secret
nuclear weapons sites in Russia, while denying reciprocal privileges
to the Russian scientists on American soil, insults Russian national
pride and is certain to result in a less stable nuclear environment.

Thatï¿½s why we must restrain these devils who would burn up the world
in their quest for global domination. We must rise up and stop the
madness! Mao Tse Tung, who led the great revolution that transformed
China, the worldï¿½s most populous nation, from a backward semi-feudal
society to a modern world power, once called the atomic bomb a ï¿½Paper
Tiger,ï¿½ and predicted: ï¿½The atomic bomb will not destroy mankind,
mankind will destroy the Atomic bomb.

ï¿½ With atomic bombs proliferating everywhere the odds seem stacked
against us, yet we must struggle to make sure Chairman Mao was right.
Nothing less than the fate of the earth hangs on the outcome.

10 Stars Excellent, factual article **********

White people must act now to stop the madness of their ethnic group,
or the entire planet including them will perish.

Just one of those things that make you go hummmm.

Who deserves to be impeached and imprisoned the most?
A president receiving face from an adult willing female?

Or a president who lies to over four people
worldwide and then orders the attack and destruction
of hundreds of thousands of innocents, 1,600 American
GI'S killed and over 25,000 permanently disfigured?

> this grounding effect significantly impact reception effectiveness?

Yes and no. The tree being spread out around the antenna is similar to
the antenna being in an attic. The electric field gets weaker the closer
you are to earth and the tree hanging over it will weaken the field some
more. This won't stop the antenna from working it is just sub optomal.

Antennas work best in the clear and the higher up they are the better
they will work.

You should trim the tree to keep branches from whacking the antenna and
breaking it when it gets windy.

You need some kind of strain relief for when the tree moves in the wind
since the chimney does not move on the other end. Some people use a
pulley and weight system for this.

Trying to import the log into the SWLOG program will result in a problem. Fortunately, Philip Atchley, beaver 8899 and James Niven of the SWLOG Yahoo group determined that the solution was to open the dbf file, remove the last record (which caused the problem and is a copyright notice), save and re-zip the file and then import the file into SWLOG.

Thanks to all who managed to solve the problem very quickly!

Good DX

813. Hoola-Loop Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-05-08 06:59:26 UTC
From: nospam@geniegate.com
Message-ID: <Lucy1115534856146430x11d7018@air.tunestar.net>
Source record: 21396

Just as a basic experament, I tried building a loop antenna out of a hoola hoop.

I wrapped 4 turns of 24 gauge (cheap speaker wire) around a hoola-hoop.

While the antenna "worked" it didn't have the directional properties I had expected. It basically seemed as though it was just a plain wire antenna.

Rotating it or placing magnetic materials inside of the loop seemed to have little or no effect.

Could it be that I used electrical tape to hold the wires in place? Could it be the curve of the tubing? (Unlike a very large diameter cardboard tube or spool, with a flat surface, the wires aren't flat they're on a curved surface (plastic tubing) making a circle. I hope I'm explaining this right.

How does one determine the number of twists to use?

Anyone else try this with success?

Do you have some sort of amplifier to go along with the loop? Some antenna wire in a hoola hoop will work with a wellbrook ALA 100. One loop is enough.. My preference is to use an "X" frame and build a square loop because the hoola hoop isn't very rigid. However, for something quick and dirty to set up, the hoop will work.

There are all sorts of tune loops you can build using circuits from the ARRL handbook. The basic idea is to make a LC series circuit, then you inductively couple the signal to a Jfet amp. I just find the notion of having to tune the loop to be a PITA. I just wish there was a more cost effective version of the Wellbrook.

NOS,
.
AM/MW BROADCAST BAND (BCB) HULA HOOP ANTENNA :
.
First - Take the Hula Hoop and find the 'joint'
where the Two Ends are Joined.
.
Second- "Open-Up" the Hula Hoop.
.
Third - Stuff-the-Hula Hoop by Feeding a Wire
around-and-around 'through' the Hula Hoop until
you have many Turns wrapped around inside the
Core or the Hula Hoop.
.
Size -vs- Turns for the AM/MW Broadcast Band
from 530 kHz to 1700 kHz :
* Large Hula Hoop 36" = About 12 Turns (~113 Ft)
* Small Hula Hoop 24" = About 16 Turns (~100 Ft)
.
TUNING - Use a 9-365 uf Air Variable Capacitor
to Tune the Hula Hoop Loop Antenna.
.
NOTE - The AM/MW/BCB Band Hula Hoop Antenna is
Highly Directional in the AM/MW Band an becomes
less directional as the Loop is used above 5 MHz.

Hank, you're correct. But last year the ILG guy sent me an email telling me the IP number I was using at the time I registered. It still worked for me yesterday. At the time of registration
I wondered
just what you are thinking... what about people with dynamic IPs... but a bit later I got the email... thankfully... because I hadn't bothered to verify what IP address I had used when I signed up.

According to the latest Journal (May) membership rates will be going up $3.00
per year, however renewals will be accepted until June 1 at the old rate of
$26.00.

Reason for increase is that printing costs are going up.

There are all sorts of tune loops you can build using circuits from the ARRL handbook. The basic idea is to make a LC series circuit, then you inductively couple the signal to a Jfet amp. I just find the notion of having to tune the loop to be a PITA. I just wish there was a more cost effective version of the Wellbrook.

****

RHF, will be along with some great info.
i have the RS MW loop/ the TorusTuner loop, and the Wellbrook 330S here. loops are fun to play with. last year someone posted the "Pizzabox loop",
here. really fun to build; check the google groups for info. the yahoo groups has 2 or 3 groups devoted to loops. and, my favorite- Joe Carr's- "Loop antenna handbook". about $20 from Universal Radio. this is the- everything you wanted to know about loops- ref. Joe's book is great.
loops are easy and fun...

I'm sure that the subject line of this post is of no surprise to many of you, but here I put it in writing. I have a Gateway Laptop computer, a very nice one, 15 inch viewable screen, CD/DVD drive, etc. But wait, the CD drive is writable. Still no revelation you say? True, but, in my feeble mind, I have pondered a question, for nearly a year I have wondered if the CD drive is merely writable or is it a rewritable drive?

Hmmm, difficult question for me, a real brain I am. Anyway, yesterday the quest began anew. I looked at the properties in the Control Panel under System, not conclusive. I looked in Multimedia, I used Norton's Utilities System Info, etc. Nothing.

How was I to solve this dilemma ever plaguing me, I needed to know? Ah, I stumbled upon the Gateway site, entered my serial number, they acknowledged that my warranty is good well into 2006, they still know who I am. I look under the various items that they offer concerning my computer, ah yes, they have a section on the CD/DVD drive. This certainly must yield the answer. I eagerly opened the section concerned, perusing the various information that is designed to help the computer illiterate gain some information about their machines. Yes yes, they have the answer, I finally, after nearly a year, know exactly what type of drive that I have.

The answer was, are you ready for this, to look on the door of the CD tray, written as clear as day, on my computer, it says "CD Rewritable DVD ROM Drive". Mind you that the door is on the side of the computer, I guess far be it from me to have actually looked at it.

A real brain I am.

The day wasn't entirely without merit though. My laptop computer seems like it runs hot. I have elevated the computer using oversize feet. I have used the dust blower sprays available in a can, clearing the fan intake on the bottom of the computer, as well as the discharge slots on the rear, yet it never seemed like it was good enough, the fan runs much too often. Online sites advocated disassembly of the laptop, so that impacted dust and hairs etc. can be removed from the fan and cooling assemblies. Being that the computer is under warranty, I did not wish to damage anything that may invalidate same. Anyway, Gateway has a section on the user replacing the keyboard in the laptop. I figured that I could gain access to the fan with the keyboard removed. So I indeed removed the keyboard, easily accessed the fan, and found a hair ball. I dust sprayed the inside, including the heat sink assembly. The processor seems to have a flattened copper tube in intimate contact with it, and this tube in turn goes to the heat sink fins (I use these terms loosely), whereupon the air blows across them from the fan. The flattened tube may contain a

gas/liquid, as the end is finished like a refrigeration sensing bulb would be. Anybody have any insights into these?

Dr. Artaud

From: David <rickets@knac.com>
Message-ID: <ga4s71pt1ou968f0o0oagggkfumft338ak@4ax.com>
Source record: 21464

May 08, 2005

Captured Al-Qaeda kingpin is case of ï¿½mistaken identityï¿½
Christina Lamb and Mohammad Shehzad Islamabad

THE capture of a supposed Al-Qaeda kingpin by Pakistani agents last week was hailed by President George W Bush as ï¿½a critical victory in the war on terrorï¿½. According to European intelligence experts, however, Abu Faraj al-Libbi was not the terroristsï¿½ third in command, as claimed, but a middle-ranker derided by one source as ï¿½among the flotsam and jetsamï¿½ of the organisation.
Al-Libbiï¿½s arrest in Pakistan, announced last Wednesday, was described in the United States as ï¿½a major breakthroughï¿½ in the hunt for Osama Bin Laden.

Bush called him a ï¿½top generalï¿½ and ï¿½a major facilitator and chief planner for the Al- Qaeda networkï¿½. Condoleezza Rice, secretary of state, said he was ï¿½a very important figureï¿½. Yet the backslapping in Washington and Islamabad has astonished European terrorism experts, who point out that the Libyan was neither on the FBIï¿½s most wanted list, nor on that of the State Department ï¿½rewards for justiceï¿½ programme.

Another Libyan is on the FBI list ï¿½ Anas al-Liby, who is wanted over the 1998 East African embassy bombings ï¿½ and some believe the Americans may have initially confused the two. When The Sunday Times contacted a senior FBI counter-terrorism official for information about the importance of the detained man, he sent material on al-Liby, the wrong man.

ï¿½Al-Libbi is just a ï¿½middle-levelï¿½ leader,ï¿½ said Jean-Charles Brisard, a French intelligence investigator and leading expert on terrorism finance. ï¿½Pakistan and US authorities have completely overestimated his role and importance. He was never more than a regional facilitator between Al-Qaeda and local Pakistani Islamic groups.ï¿½

According to Brisard, the arrested man lacks the global reach of Al-Qaeda leaders such as Ayman al-Zawahiri, Bin Ladenï¿½s number two, Khalid Shaikh Mohammad, the mastermind of the September 11 attacks, or Anas al-Liby.

Although British intelligence has evidence of telephone calls between al-Libbi and operatives in the UK, he is not believed to be Al-Qaedaï¿½s commander of operations in Europe, as reported.

The only operations in which he is known to have been involved are two attempts to assassinate Pervez Musharraf, Pakistanï¿½s president, in

2003. Last year he was named Pakistanï¿½s most wanted man with a $350,000 (ï¿½185,000) price on his head.

No European or American intelligence expert contacted last week had heard of al-Libbi until a Pakistani intelligence report last year claimed he had taken over as head of operations after Khalid Shaikh Mohammadï¿½s arrest. A former close associate of Bin Laden now living in London laughed: ï¿½What I remember of him is he used to make the coffee and do the photocopying.ï¿½

What is known is that al-Libbi moved from Libya to Pakistan in the mid-1980s before joining the jihad in Afghanistan. He married a Pakistani woman and is said to specialise in maps and diagrams. He is thought to have joined Bin Laden in Sudan with other Libyan nationals in about 1992 and to have become Al-Qaedaï¿½s co-ordinator with home-grown Pakistani terrorist groups after 9/11.

Some believe al-Libbiï¿½s significance has been cynically hyped by two countries that want to distract attention from their lack of progress in capturing Bin Laden, who has now been on the run for almost four years.

Even a senior FBI official admitted that al-Libbiï¿½s ï¿½influence and position have been overstatedï¿½. But this weekend the Pakistani government was sticking to the line that al-Libbi was the third most important person in the Al-Qaeda network.

One American official tried to explain the absence of al-Libbiï¿½s name on the wanted list by saying: ï¿½We did not want him to know he was wanted.ï¿½

Whatever his importance, al-Libbi is the sixth Al-Qaeda figure to have been caught in Pakistan, suggesting that the country is now the organisationï¿½s centre of operations. The interior minister, Aftab Khan Sherpao, conceded that Bin Laden and his deputy might be hiding in a Pakistani city.

ï¿½But the capture of al-Libbi will have made them very apprehensive. Whether big fry or small fry, theyï¿½re on the run, I can tell you that.ï¿½

Greetings,

I had this great idea that my mom would really like shortwave radio, so I picked up a 7600gs for her and the latest Passport. She is still confused on the topic and we don't spend enough time together for me to set it all up for her properly.

I figured people who listen in here have their own favorite casual listening stations. the stations you have programmed in on your portable, or the station you've got perpetually tuned into in your shop. Easy signals in the US. My own is ABC at 9580, which I listen to ovenight on those nights that i'm up late (or up early) working on projects. I also tune into WBCQ on 7415- there's some very entertaining stuff on that station.

Anyone else have a casual station to share?

Thanks

Michael

TDP still shows a 100 kW transmitter, though they may have had it powered down,
and increased it, or it just may have been good propagation.

QSL'd here back in 1987.

==========
On December 7, 1941, Japanese bombers attacked the US Pacific Fleet in Pearl Harbour, Hawaii, killing about 2,460.41

FDR, and his closest advisors, not only knew of the attack in advance and did not prevent it, they had actually provoked it. Lt. Arthur McCollum, head of the Far East desk for U.S. Navy intelligence, wrote a detailed eight-step plan on October 7, 1940 that was designed to provoke an attack.42 FDR immediately set the covert plan in motion. Soon after implementing the final step, Japan attacked Pearl Harbour.

After meeting FDR on October 16, 1941, Secretary of War Henry Stimson wrote: "We face the delicate question of the diplomatic fencing to be done so as to be sure Japan is put into the wrong and makes the first bad move -- overt move." On November 25, after another meeting with FDR, Stimson wrote: "The question was: how we should maneuver them [the Japanese] into the position of firing the first shot."43

The US had cracked Japanese diplomatic and military codes.44 A Top Secret Army Board report (October 1944), shows that the US military knew "the probable exact hour and date of the attack."45 On November 29, 1941, the Secretary of State revealed to a reporter that the attack's time and place was known. This foreknowledge was reported in the New York Times (Dec. 8, 1941).46

One more thing you might have realized..Have you ever even seen an NON
rewritable CD burner?? I haven't. Ever. Even going back to 1X drives..
I guess they might have existed, a long time ago...

Sounds like you have a heat pipe and there probably is liquid in it.
There are a lot of aftermarket CPU heat sinks with them.

Ignore the Dogg-ma. He has a pathological hatred of Li. He's so hateful
that he can't think straight.
Dogg-ma is so obsessed with his hatred of the Li that he can't deal with
reality.

.You Would Not Buy Stocks in China

If you believe in democracy, you would not buy stocks in China because your
money would likely be used by the CCP to reinforce autocracy and suppress
democracy.

If you believe in Christianity, you would not buy stocks in China because
your money would likely be used to support the propagation of violence
against believers and destroy beliefs in gods.

If you practice Falun Gong, you would not buy stocks in China because your
money would likely be used in the persecution against Falun Gong
practitioners.

If you were an ordinary civilian, you would not buy stocks in China because
you would likely have no place to file a petition when the communists
embezzle your money.

Even if you were a high-level official of the CCP, you would not buy stocks
in China because you have the best understanding about the black box
operation and consistent lies behind the scenes.

You would not throw your money into a dirty bottomless pit because it might
prolong the CCP's autocracy for several days, or be used to persecute Falun
Gong practitioners or underground church priests, arrest several independent
pro-democracy writers and justice lawyers, manufacture tanks that roll over
patriotic students, or put several Zhao Ziyang-like men under house arrest.

You are a smart investor, you will think it over.

The four largest state-owned Chinese banks will go IPO (Initial Public Offerings) in Hong Kong before bankruptcy. The CCP is trying to take advantage of the opportunity to absorb overseas capital, accomplishing its blood transfusion all at once.

The Taiwanese Association of Investment Victims to China gives several examples. One example is what happened to a Taiwanese businessman surnamed Liao. He signed a contract with the local government of Longnan city, Jiangxi province to build a park. The contract was to be valid for 25 years. Mr. Liao invested about 0.72 million US dollars (or 24 million NT dollars). After the replacement of the local CCP Secretary, the Longnan municipal government retrieved the land without paying any indemnification. The new CCP Secretary told Liao, "You can sue me if you dare to." Another occurred to Taiwanese businessman, Chang Zhongxin, who had a joint venture with a Chinese partner in Shandong province. Chang filed a lawsuit against his partner because he was falsely incriminated. The judge urged him to make concessions, "There is no way that you can win over them. Forget about it!" The third example is a 36 million US dollar (or 1.2 billion NT) investment by Taiwanese businessman, Cai Gaode, to produce engines for motorcycles. Once the factory was established, China withheld the operation permit. An investment of 36 million US dollars literally became China's property without any return.

Most all copper wire on the market is soft draw and will break after a few
years of constant tension. Hard draw copper wire is very tough and robust.
I use 18g lamp safety wire. This is the thin copper wire that servers as
a safety ground and as a safety wire in case a link in the lamp chain
breaks in hanging chandeliers.

I have 50' of thin braided copper wire from Home Depot that's been
under constant tension for 6 years 9 months. Enough tension to
deflect the top of a 20' support (two fence rails, a spike base and a
building clamp at 9') 2 to 3 inches.

I heard it too. I think he called it "ESSB"
and it's bandwidth is 3.6 Khz. To me, it sounded just like AM via ECSS as we
do now. So, they will basically broadcast in ECSS. Is that possible?? Then
we'll have "new" radios that offer this so called new mode :) But we know
better.

Already done. They responded that they'll consider the Canadian
advice if and only if it irritates England, is warmly received by
Egypt and earns them favorable trade with China.

BDK <kingratatatboy@buckeye-express.com> wrote in
news:MPG.1ce7f3a03b5affd79898c1@news.buckeye-express.com:

I use the Plug and Pray system of computer operation, but I am somewhat advanced compared to the man that thought his CD tray was a Drink Holder. Probably an urband legend, supposedly the Drink Holder issue was fielded by Tech service of some company, a man was calling for a replacement as his Drink Holder had broken off.

As I look again at the PDF file that I saved, the differentiation that Gateway makes is:

1. CD Drive
2. DVD Drive
3. CD-RW/DVD Drive

As you stated, CDR is not even an option.

Regards,

Dr. Artaud

How is watching Doc Strangelove punishment? - your thinking is flawed as far as sentencing is concerned. Make him watch Rocky V or Conan the Barbarian or any movie with Ben Afleck and J Lo in it - that is real punishment. Doctor Strangelove is a comedic masterpiece. Anyone remember the CRM114 discriminator the B52s had attached to the SSB radios in that movie?

He was a guard. I encountered quite a few of his compatriots back in the Cold War. They guarded the aircraft, the weapons storage areas
(bomb dumps) etc. by standing outside and preventing others from entering.

I doubt he ever saw, let alone got close to, a nuclear weapon; let alone the ï¿½complex electronic systems.ï¿½

With the possible exceptions of Thule in Greenland, and Alaska; SAC bases were far removed from DEWline (Distant not distance) and
certainly were in no way a part of SAC.

DEWline bases, located in the high arctic, were strictly RADAR stations; a few buildings and antennas in the ice and snow.

>you have many Turns wrapped around inside the
>Core or the Hula Hoop.

I thought about doing that, but, for some reason I am under the impression
that wires in a coil shouldn't cross. (Even though they are insulated)

Hopefully, someone will correct me if I'm wrong on this. (or for that
matter affirm I do have the concept)

. A loop antenna picks up magnetic forces rather than electrical?

. The magnetic pulses are converted to electrical impulses via the
coiled conductor?

. Crossed wires will null-out the magnetic field, because the lines
of magnetism on a crossed wire cancel each other out?

. The reason we need a non-conductor (plastic) is due to eddy currents
generated in the metal, this would bleed off the signal?

Do I have this right?

If I understand properly, how would one wrap wires inside the loop
without having them cross each other? This was the part I couldn't
understand.

>NOTE - The AM/MW/BCB Band Hula Hoop Antenna is
>Highly Directional in the AM/MW Band an becomes
>less directional as the Loop is used above 5 MHz.

I didn't use a tuning capacitor, (Figured I'll move on
to that after the basic antenna is done)

However, in mine, there was very little effect in rotating
it. Any idea why?

I should point out that I had 28 feet of shielded cable leading
to the loop, w/out a balun of any sort. (Feeding a DX-392
radio) I'm wondering if that picked up most of the signal.

>CALCULATOR - Loop Antenna Calculator
>http://www.mindspring.com/~loop_antenna/amloop_calc4.htm

Much thanks!

>READ - The "TRICK" to TV 'type' Coax Cable [Shielded]
>Loop Antennas
>http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1626

Hmm.. interesting idea! Would one use the shielding as the wire
and ignore the inner wire or.. connect the middle wire to the shield
so you'd have 2 turns?

Excellent condition FRG-100B with original box, manual power supply and service manual on CD. Has hand-selected AM "wide" filter with good skirts. Also has extra 12V input connector on the back using standard 5 mm type coaxial power connector (instead of having to use that expensive, oddball Yaesu connector for portable operation!) $350 shipped in US and double boxed.

NOS,
.
IIMU - That when Wires Cross at 90* Perpendicular
to each other or run opposed to each other; that they
can cancel each other out.
.
Generally when Wires Run Side-by-Side in a Coil
their effect is Additive
.
When the Wires are run inside the Hula Hoop the
Wires are side-by-side. While not the best method
of Laying the Wraps of a Loop antenna this crude
method does work reasonable well.
.
Simple Enameled {Magnet} Wire will work OK for
the Loop Antenna Windings inside a Hula Hoop.
.
Use the Loop Calculator.
Four (4) Truns of 24 AWG Wire would Tune around
10 MHz and would not exhibit any directional
tendancy for the reception signal but would provide
some nulling of local noise sources.
.
With most Loop Antennas, the 'shorter' the Feed-in-Line
the better. If a Loop Amplifier is used at the Loop Head
then a longer Feed-in-Line can be used.
.
Read the two Coax Cable [Shielded] Loop Antenna
links then you may understand about their design
and construction.
.
The "Loop Antenna News and Information Forum"
can be of great Help-to-You in Finding Answers to
your Loop Antenna Questions.

It is not just an act of punishment. It is penance for posting off
topic. Penance is an act of devotion and I always looked at it as
correcting or making up for a wrong. In other words a constructive act
instead of just an act of suffering. I can see you were not brought up
Roman Catholic.

I used to, but propagation out West sucks most of the time. I find
satellite radio (Sirius, XM) much more rewarding, on an entertainment
curve. Sirius carries many major International stations, including a
few no longer available on HF.

>
> Anyone else try this with success?

The twisting the wire around the hoop will make the coil look less flat
than a one turn electrically similar to physically and this will make a
null less defined but that may not be the main problem.

The main problem may be the frequency you are trying to operate it at. A
loop null will work best when you have a transmitted source that looks
like a point source like daytime BCB or a ground wave signal. If you are
trying to use this hoop on short wave with reflected or refracted waves
off the ionosphere then the source is spread out and you won't get a
good null on a signal with the hoop. On the short wave band you can get
a null on a one turn loop at the low end. I've done it for 5 MHz WWV but
the higher you go in frequency the harder it gets. A small amplified
loop can probably do it at higher frequencies.

Another problem might be the way you terminated it as any antenna needs
to be terminated properly.

DaviD,
.
For along time in this Nations History there
was true Separation of Church and State.
.
Then alone came the Income Tax and Charitable Contributions
and so called "Tax Exempt Status" which VIOLATED the
Rights of All Churches to be Separate from the State.
.
The State now Imposes its will and dictates to the
Churches what they can do and can not do.
.
Get the Federal Government Out of Church Business
Repeal (Re-Write) the Law as it applies to the
"Tax Exempt Status" of Churches and give America
True Religious Freedom Again - No the Dictatorship
of the Dollar by the State.
.
God Bless America - set my people free ~ RHF

So how does your R7 perform compared to the R8 and R8B you own?

What filters do you use in the R7 for AM and SSB reception?

What modifications or options does your R7 have in it?

I applied in January from work in Alaska and the same username/password
works from home in California. So, it isn't tied to your IP.

905. Re: Hoola-Loop Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-05-08 20:01:15 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <427E6FEE.5EBD@mindspring.com>
Source record: 21640

All small (compared to a wavelength) loops have the same pattern
and an infinite-depth null.

Alas, they have separate patterns for electrical and magnetic
fields. A tall loop tends to act as a vertical antenna and pick
up plenty of electric field. So where you have your nice automatic
magnetic field infinite null, it's filled in by electric field
which can't be cancelled by a magnetic field since it's 90 degrees
out of phase (otherwise it would just shift the null).

Shortwave tends to give you electric field responses faster than
MW, just owing to the relative size of the loop and the wave getting
larger as the wave gets smaller.

In addition, as said, multiple or moving apparent sources owing to
ionospheric bounce may make a permanent null difficult to find.

Careful construction is said to reduce the electric field response
to something very small, so you get deep unfilled-in nulls.

An amplifier on the loop amplifies the magnetic field response mostly,
and so gives the same effect as good construction without having to
have good construction.

>realm.

Try listening to some different parts of the spectrum, like the
Trinity TV network. I used to do that for the entertainment value.
("This week in Bible Prophesy" was the funniest thing on TV for a
while). But some of these folks are too unsettling to be funny.

"All Feminists are Witches"
"Environmentalists are Demon Worshipers who God is going to destroy"
"Nuclear weapons/war are God's cleansing fire"

All of these were from one hour of John Hagee, a pastor of a mega-church
in San Antonio, Texas.

It's not a LITTLE realm. About 10% of the population are members
of churches like that. (Let's hope that a large percentage of them
are only in it for the business contacts, or to use the health club).
They have their own schools where they teach their own alternate history
of the USA with angels and miracles and that sort of magic. And their
own version of "science". All to prepare the world for the Second Coming.

Anyone who disagrees with them is not just someone with a different
opinion of how things should work, they are a TOOL OF SATAN who must
be ignored or neutralized.

These folks have declared a civil war on America and they now hold
the balance of power in the Republican party. Have you seen the
recent coverage of the influence of Evangelical Christians in the
Air Force Academy. "Nuclear Weapons are God's Cleansing Fire", just
the sort of attitude you want held by those two guys down in the
control center holding the launch keys.

Source record: 21641

I don't know what is happening since the space weather page is 10 hours behind but the reception late morning until now is poor. Last night until early this morning it was good.

Radio Netherlands is poor on 16 and 19 meters. Radio Japan poor on 16 meters.

908. Re: Yaesu FRG-7 better than Icom R75 or Drake R8B !!!!

Newsgroup: rec.radio.shortwave
Date: 2005-05-08 20:27:16 UTC
From: "John S." <hjsjms@cs.com>
Message-ID: <1115584036.027916.155580@g14g2000cwa.googlegroups.com>
Source record: 21642

I owned the FRG-7 sold under the Sears name. It was a decent receiver, and a reasonably good performer in it's day. Because it's design is dated, tuning around is more complicated than it should be, the receiver has only 1 filter of average selectivity, etc.

The ongoing hype surrounding the FRG-7 inflates it's image beyond it's capabilities and as a consequence it is usually overpriced on Ebay.

There are times when the R7 is superior due to its 'true' passband tuning. I
never would have pulled Northern Cyprus in on 6150 without it.

> What filters do you use in the R7 for AM and SSB reception?

I have the 8, 6, 4, 3 and 2,3 kHz filters in it.

> What modifications or options does your R7 have in it?

No mods, but does have the NB and the above filters.

Any idea where it is coming from? It comes in good here in South Carolina,
so I imagine that it can't be too far away.

I can go check but off the top of my head I think it's from Bonaire up until
about 0300 or so then it switches to Delano.

It's either Bonaire or French Guiana.

Check the EiBi skeds via my page below.

This is very strange. Here is a site that pulls information from NOAA
site that is 10 hours behind and yet it has up to date information that
says that we are in Geomagnetic storm conditions. At least that explains
why conditions are poor.

Sorry if I hurt anyones feelings but I call them as I see them. If I
have a problem with what someone has posted I tell them. If there are
some "secret" groups out there they should stay that way I'll stick with
the public news groups.

Are the filters from Drake or from somewhere else?
```

Sorry to be pest but do you know what center frequency these filters operate on? The R8 and R8B are around 50 KHz and if they are Drake stock filters I was wondering if they were also low frequency IF filters or something higher?

I was also wondering if you found the noise blanker to be effective but you are in a fairly low noise area so I suspect you don't know.

All are Drake except the 3 kHz filter which is from Sherwood Engineering though I'm certain he had those made up by someone else.

> Sorry to be pest but do you know what center frequency these filters
> operate on? The R8 and R8B are around 50 KHz and if they are Drake stock

They are centered around 5.695 MHz or so as I recall.

> I was also wondering if you found the noise blanker to be effective but
> you are in a fairly low noise area so I suspect you don't know.

The noise blanker is effective, though I rarely have to use it. Generally the S meters sit on S1 or below here during the day, even with several hundred feet of wire connected to the receivers. If it goes up, I pick up the phone and call the local Board of Public Works.

That is one problem being near an ocean beach is that the ocean breeze deposits salt on the power line insulators. The humidity allows the salt to become ions in the surface moisture and the insulator leakage goes up and generates noise. Southern California Edison has trucks that spray high pressure water to wash them off but you can't get them all the time.

Yeah, that would indeed be a hassle. The only damn salt around here is what
maybe happens to go on the roads in the winter.

Oh yes, the R8 series does not use crystal filters of course but rather L/C
networks... The R7 uses crystal filters.

That is sometimes given as a reason for the R8 audio sounding better. The 1A,
and I think the 2 series and everything pretty much up to the R4C used L/C
networks rather than crystal filters.

No problem. I've certainly been in Ventura before and I used to hang out in Ojai many, many years ago.

Snip: I would have to suspect that spam snares a number of people or
else the spammers and rip off artists would try something different.
There's the case of the recent (now jailed) spammer that was making
a reported million a month or million dollars a year.

How long ago was that? I have lived here since 1978 and the area has
changed a lot in that time.

Wonder why it is for sale? But then we here in Canada don't use jet skis -
just snowmobiles in our "great white north".

Dr. Artaud, that "copper pipe in coantact with the CPU" is a heat pipe.
It will conduct more BTUs/caleries/joules of heat then an equal sized
piece of silver. As a matter of fact I think it is about 50 times more
effective. It has a liquid, alchol most commonlly, that evaporates and
carries the heat to the far end where the vpaour condenses, giving up
the heat. I have one slavaged from a defunct laptop this will carry a
much
larger heat load then I expected.
Edmonds Scientiffic used to carry them and may still. A very
interesting
way to move heat in a dense package without "moving", or active parts.
Terry

I think you'll find this is Jindalee under a different name.
They spent a significant amount developing it during the
'90s, this is the first practical application I've seen
publicly announced.

news:telamon_spamshield-C919C3.13361508052005@newssvr21-
ext.news.prodigy.com:

Maybe Rick Santorum got to it first. He has proposed that information
from the National Weather Service not be made available, in general, to
the public. Instead, you would need to use a subscription service for day
to day weather information. Of course, they would make NWS information
available if a storm approaches.

I use Notify, offered on the Weather Channel, and I've always been
surprised that Notify would ring my home and cellular phones, and send a
message to my pager, 5 or more minutes before the NWS released the
information for activation of compliant weather radios. Notify uses the
NWS information, you would think that the NWS could get the message out
before Notify.

Imagine, a tax payer funded service whose data must be withheld from the
tax payers.

Dr. Artaud

Apparently Accu-Weather, in Pennsylvania, is a contributor to his and
Specter's campaigns.

http://www.post-gazette.com/pg/05116/494329.stm

"WASHINGTON -- Sen. Rick Santorum has introduced legislation that would
limit the information that the National Weather Service can provide to
the public, in what the Pennsylvania Republican's aides describe as an
effort to make sure that private weather companies -- particularly those
in his home state -- can compete in the marketplace and retain jobs.

Santorum's legislation directs the U.S. secretary of commerce to limit
the National Weather Service's offerings to just those services that
private-sector weather companies cannot or are unwilling to offer --
unless the information is related to "severe weather forecasts and
warnings designed for the protection of life and property" or information
that the government must provide under international aviation accords."

Lucky,

Don't think that's possible. If I understand correctly, ECSS (Exalted
Carrier Selectable Sideband) is when the *receiving* radio generates a
signal to counter fading. (I'm sure there's many who can explain it better
than that!)

The World Today comes on in just over an hour on 9825. It'll be
interesting to hear what they have to say, or if it will be a special
edition for the commemoration. If so, it certainly will make for better
listening than the special edition a few days ago that was all about the
British parliamentary election! :)

I usually don't listen to RN, but considering that the Netherlands had a
big ceremony today complete with President Bush, it might be worth
tuning in.

Looks like The Weather Channel, which is privately owned, is competing
just fine with the NWS. I think the real problem here is that

Accuweather is usually anything but accurate. My local newspaper uses Accuweather for its weather page, and the forecasts are usually wrong. In fact, the local TV stations have more accurate weather info than the Accuweather supplied newspaper forecast. If Santorum's bill passes, it is likely that the NWS weather info broadcasting stations on VHF (162 Mhz or so) would shut down. Only a US politician could propose that taxpayer funded info be withheld from the taxpayers so that those taxpayers have to rely on the politician's favored privately run weather service/campaign contributor.

BBC is very poor on 9825 at 0200. Usually this signal is a solid S9 here
in CA, but it's nearly inaudible tonight, dropping completely out at
regular intervals. Too bad-I was looking forward to their VE Day
coverage.

Like the stainless steel messenger wire used in figure-8 CATV drops?
It has a plastic jacket and is made to support more than its own weight
for years. 100 foot drops of RG59 or RG6 are common and the messenger
wire will peel away from the coax. I had several thousand feet of it,
but my retired dad found my stash and has used all of it for his yard
and garden projects. The only bad thing is trying to solder to it, but
a clamp and N0-OX will take care of that.

If you want to qualify my post, a request for news on current
propagation instead of the usual junk on the news group as complaining,
that's your problem and no I wont stop requesting that people post SW
radio related news in the news group.

Well Telamon, I just don't know what to say. This is a place where DXers
meet to talk about things of interest to DXers where they are DX related or
not.
You just don't seem to understand that this is FOR BSing by DXers. I
would think you have been run off from some or all the real DXing list for
what ever reason based on your last few post.

Go Dodgers, 7 to 2 Amen.

I'm personally somewhat adverse to private groups. I don't like the
exclusive nature of them. I'm comfortable in a public venue. You trying
to tell me I'm missing something here and that these private groups have
relevant information on propagation and the reception of SWBC that I
will not see the equivalent of here in this news group?

Lots of the people on this group have serious technical expertise. If you'd just describe what the problem is, I suspect they could help you. Just give it a shot....it's better than continuing on with a defective setup.

How you doing?

90 days to retirement and off to the Philippines.

Thanks for spending the time looking for the parts, some day the part will
show up. I'll start watching the hock shops for one and I'll send it to you
if I find one. Seems like I saw one the other day someplace.
So, how you all doing over there? Sure taking a lot of mind set for me
to get ready to move even after living all over the world most of my life I
always had roots to come back to but, I getting so old it doesn't make a lot
of difference. (63)

Don't know the answer but CHU uses SSB, not DSB, with carrier. Try tuning it
in with an SSB receiver and switch between USB and LSB to hear the
difference. I forget which sideband is suppressed.

Ever seen the Kosher food markings at your supermarket? When you buy foods with those symbols, you ARE subsidizing the Jewish faith. Rabbinical organizations get the money for having provided the 'inspection' and approval of the food stuff.

Nobody has ever told you about that, have they? It's just like a hidden tax on everybody. If a company supports any religious organization directly through the manufacture/processing of food, the customer should be made aware of where the money is going. I propose that the religious symbolism associated with that particular group be PROMINENTLY displayed on the labels.

i was listening to art bell the other day. he was telling about a
broadcast mode that was an improved ssb technique. it greatly improves
the audio distortion problems associated with ssb. can someone shed
some
light on this for me?....

Normally , there are no real audio distortion problems
using SSB. It's the other way around...AM is prone to
phase distortion. Thats that funky distortion you often
hear on AM, between fades, etc...You don't hear that on
SSB. The "ESSB" that Art talks about is nothing like ECSS,
which is exalted carrier sideband suppression..."I think thats
the name anyway..." It is nothing more than automatic sideband
selection for AM, to reduce the effects of phase distortion. You
can do the same thing manually....Kinda inconvienient though...
ESSB is nothing more than "ham talk" for SSB that exceeds
the usual 2.4-3.0 kc bandwidth...Say 2.7 as an average width...
Both my 706, and ts-830 are about 2.7 overall... When they say
ESSB, they are referring to using a wider rf bandwidth, in order to
increase the audio bandwidth. With ssb, the rf and audio bandwidth
are the same...On AM, the audio bandwidth is half the rf bandwidth.
So you can see, for a given bandwidth, it makes more sense to run
SSB, vs AM, if you want a wider audio bandwidth. IE: If you get to hog
6 kc, with ssb, your audio bandwidth will extend to 6000 hz. With AM,
you would only get 3000 hz...Myself....I've always felt AM was a mode
that was quite inefficient... MK

If ESSB is nothing more than wider bandwidth, I don't see it as much of an innovation. They could have made the bandwidth wider years ago.

Art Bell mentioned several times that ESSB gets rid of the Donald Duck sound to sideband. However, you get the Donald Duck sound when there is a frequency offset rather than bandwidth limiting.

Like land, they aren't making any more bandwidth. Seems to me we should conserve bandwidth.

Just an FYI, you can make "clean" loops using ribbon cable. [It's that flat cable with many parallel wire of different colors. I'm sure you've seen it before.] What you do is put on insulation displacement connectors that mate on either end and connect them in a manner where there is a one pin shift between the connectors. The free pin and free socket are the locations where you connect to the loop.

The problem with running many wires in parallel is there is capacitance between the wires, so the loop is really a distributed inductor and capacitor.

It seems to me what you are not getting in a loop of many turns is a large aperture. That is, does one big loop act the same as many turns in a smaller loop? My gut feeling is you would get a better null with one big loop. The null is quite important in many situations.

I've planned on doing single turn versus multiturn comparisons, but haven't got around to it. I can tell you that bigger sure is better than small.
This is a loop 4ft on the diagonal:
http://www.lazygranch.com/images/radio/loop1.jpg
This version is 11ft on the diagonal, and is probably at the practical limits of this style of support:

If ESSB is nothing more than wider bandwidth, I don't see it as much of an innovation. They could have made the bandwidth wider years ago.

You hear some talk like it's some real advancement of the "state of the art"...But it's nothing really new...
The hams haven't really messed with it until recently, as most adheared to the appx 3kc bandwidth for ssb in the ham bands..

Art Bell mentioned several times that ESSB gets rid of the Donald Duck sound to sideband. However, you get the Donald Duck sound when there is a frequency offset rather than bandwidth limiting.

Correct...All increasing audio bandwidth will do is mainly increase the

high end...Like turning up the treble on a stereo, when it's all the way
on "bass"...Or... Like comparing the average AM-BC signal, with FM-BC...
And FM -BC ain't all that great compared to a home source...

Like land, they aren't making any more bandwidth. Seems to me we should conserve bandwidth.

I have no problems with messing with the so called "hi-fi" ham audio, but I think it should adhere to a 3 kc width..At least for most of the bands...
They have enough room on 10m to have a section for "wide-ssb"..
But most of the other bands are too tight for space to run wide signals..
But.....According to the fcc's latest ruling on the matter, they don't really
care as long as you don't interfere with another station...Or so it seems...
They do give the impression they would prefer that ssb be restricted to

the "de facto" 3 kc limit, which has been the assumed limit, and in the past,
was the actual rule...In recent years, there really is no rule on it as far as
a specific allowed bandwidth in part 97. Many are taking advantage of that.
If you use the 3 kc width for ssb on 75m, you have room for 83 QSO's, without
interference. If you expand out to 4kc, you lose room for 21 qso's as you will
then only have room for 62 qso's without interference..

When you have several 100 hams vying for the band, using wide
bandwidths
will cause things to get tight. They wouldn't fit now, except that many
share the
same freq...Roundtables, etc...I think if the hams wanna play hi-fi,
they should
consider the costs...I'm all for good audio, but it gets silly after a
point...
Consider that the "hi-fi" guys can only talk to other hi-fi guys, if
they want to
be heard in all their wide glory...It will be a total waste to most ,
unless they
have a radio with wide filter capability. To the average joe with a
stock radio,
they just sound fatter than average due to all the usual "rack"
processing...
But they can't hear the improvement in high end, as their radios aren't
capable.
You can stay within 3 kc, and still have very good sounding audio.
Many
"rack" boys and girls stay within 3 kc...Most stock radios aren't that
wide...
Most are 2.4, plus any filter slope...:/ Most average about 2.7 kc as
far
as the usable range...But many of the newer high end radios can
go pretty wide, receive, or transmit. Myself, I think things should
stay as they
have been...Or assumed anyway...3 kc....3 kc is the law in
Canada...Used to
be here in the US I'm pretty sure, until they decided to omit it from
part 97...
But even with the vaque wording, to me , part 97 still implies the use
of 3 kc for
ssb. If you read it real carefully, you can see it in two places where
it's *implied*
I don't see why they don't just decide on a limit, and state
such....They probably
will have to do it sooner or later...Instead, they decided to reach an
undecision
and let everyone do pretty much as they please for now. Within reason
anyway..
I bet if you had a qso at 3.800 and a ham plops in on 3.795, with a
8-10 kc wide
signal, the fcc will consider it interference to the one on 3.800.
They should....
I would...One QSO per every 8-10 kc on 75m, seems fairly silly to me,
just to
be able to sound like Howard Stern....

The E-W MW propagation just before sunrise is bad this morning.

N-S seems fine.

Central Ohio at 5:30am, I hear Cubans over WFAN 660 NYC - I can null the Cubans and then WFAN is way down in the noise where normally it's a local until about 5:50 (and comes back around 6:30 as a 2-hop skip, replacing the nighttime 1-hop).

The local WCLT 1430, normally unreadable owing to incoming E-W skip on the frequency, sounds like a local.

WRDW 1630 Augusta GA is loud over its competitor KCJJ 1630 Iowa City.

Sounds like you're having antenna problems. Why don't you describe them
for us. Maybe we can help.

By the way, there is a group called alt.satellite.radio. If you want to
sell a satellite radio, you're most likely to find a buyer if you post
to a group that's devoted to satellite radio.

Good luck!

Steve

1004. New AM station today in Utah KUTR 820 KHz

How does your ''expertise'' stack up against a geomagnetic storm?

Listen, Pal. Nobody enjoys radio more than I do. Hardly a week goes
by when I'm not configuring some kind of electromagnetc communications
device. But, for pure listening enjoyment, based on content, HF has
been rendered obsolete by modern delivery methods.

Yesterday, while many on this board were whining about bad reception
due to a magnetic storm, I was casually enjoying the VE Day coverage
from Romania, Russi, Holland, Israel, etc. on WRN via Sirius.

For half the price of a decent HF receiver, I can buy a Sirius
receiver and a ''lifetime'' subscription.

To tell you the truth, since Tahiti went off the air, what's the
point?

They will track you like a common criminal.

''The Real ID Act says federally accepted ID cards must be "machine readable," and lets Homeland Security determine the details. That could end up being a magnetic strip, enhanced bar code, or radio frequency identification (RFID) chips.

In the past, Homeland Security has indicated it likes the concept of RFID chips. The State Department is already going to be embedding RFID devices in passports, and Homeland Security wants to issue RFID-outfitted IDs to foreign visitors who enter the country at the Mexican and Canadian borders. The agency plans to start a yearlong test of the technology in July at checkpoints in Arizona, New York and Washington state.''

Why do you believe satellite offers better content? The Sirius
schedules available on the internet certainly don't back up this claim.

>Yesterday, while many on this board were whining about bad reception
>due to a magnetic storm, I was casually enjoying the VE Day coverage
>from Romania, Russi, Holland, Israel, etc. on WRN via Sirius.

So what? I was getting this stuff with no problem. And I don't have to
mail a check to Sirius every month.

>For half the price of a decent HF receiver, I can buy a Sirius
>receiver and a ''lifetime'' subscription.

You could probably buy a clump of dirt, too, but so what? It has no
relevant value.

>To tell you the truth, since Tahiti went off the air, what's the
>point?

The other stations. The utlities. Etc.

Now I can't tell if you have a defective setup or if you just aren't
very interested in radio. To some extent I think you're just trolling.
Otherwise, why would post here instead of to alt.satellite.radio?

DON'T SWEAT THIS !

It is VERY EASY to defeat ANY type of RFID or embedded chip in an ID card.

All you have 2 do is put it in a microwave oven
on a flat dish and run it on HIGH POWER
for 12 seconds ----> DONE ! --> Bada-Bing !

The card and photo will still be intact but any/all chips which are
embedded
in the same will be 100% NON FUNCTIONAL.

This works with ANY type of so-called Smart Card as well
as any RFID chips or strips which may be embedded in
consumer products as well.

While your at it, if your car has OnStar or similar have this
disabled and/or ripped out asap. Visited a friend who is a
PD Officer and he showed me with a few keystrokes how
cars with OnStar can be tracked in real time via the cellular
telephone networks. Onstar is a TRANSPONDER which
broadcasts the VIN and a GPS coordinate for any 2000 and
newer car which is so equipped therin.

UNPLUG the 12 Volts or GET ONSTAR OUT OF YOUR CAR.
It is a real and present privacy threat.

I don't think it's a very good idea unless she lives in an area where
there are strong decent signals. (Only ones I get are religious) BBC is good,
but for me anyway, it's rebroadcast on FM anyway.

I usually end up tuning into NPR or something mainstream for overnight,
the fade in <-> out of shortwave keeps me awake.

I do like radio cuba (6000) but only because it amuses me to hear something
so anti-american. (As an "information source" it ranks up there with Mr. Limbaugh
or Howard Stern)

''Clear and present danger'' sounds like some kind of buzz-words.

Do you read much history? Do you engage in any kind of critical
thinking?

Or is it all just knee-jerk reacting?

Do these words mean anything to you:

''...governments are instituted among men, deriving
their just powers from the consent of the governed; that whenever any
form of government becomes destructive of these ends, it is the right
of the people to alter or to abolish it, and to institute new
government...''

That's your problem. You view our founding documents as history.
They are as relevant now as they ever were. Despotism have been
around a lot longer than democracy. Our founders had Bush and Company
in mind when they conceived this government. Make no mistake about
it.

My wife and I are planning a trip to the Dominican Republic which will span the end of June to early July. Does anyone have recommendations as to which frequencies I can try, particularly those I might not normally get here in Brooklyn, NY, or those I wouldn't get clearly here? I normally listen to Radio Netherlands, the BBC, Radio Canada, and sometimes Voice of Russia and Radio Japan.

I've been unsuccessful at receiving the English broadcast of Radio France - might I have success receiving it from the Dominican Republic?

If it matters, I have a Sony ICF-SW7600GR with an AN-LP1 antenna.

--

Lost, yesterday, somewhere between sunrise and sunset, two golden hours, each set with sixty diamond minutes. No reward is offered for they are gone forever.

Where do you GET this stuff? The Dems are no more (or less) destructive to America than the Reps are. At the moment, we are in the middle of one of the most violent assaults on our rights since Tailgunner Joe. It didn't start with Bush, either. It started with Slick Willy, but the erosion is most definately continuing through the Bush administration, using 9/11 as an excuse. Passing more laws will not stop terrorists. Terrorists, like any other criminal, pay no attention to laws, and are most likely sitting back laughing their asses off at us as we get strip searched at airports, have our private lives subjected to inspection, and are forced to get ever more secure identification just to function in our supposedly free society. Meanwhile, they find other ways to circumvent all of it and go on with their activities.

>starting operations today.

I should think that unless you're right near a KSL cochannel, KSL
would be easier in North America. WVNJ isn't far from here (NYC) but
they're only 2.5 kw at night and KSL makes it frequently.

The big trouble with 820 is WBAP in Ft. Worth. There's a cochannel
here on 820 (WNYC) but that's only 1 kw at night. By the way, if you
hear BBCWS over night on 820 you may be picking up WNYC.

RFID chips have a range of, at best, a few feet. While Big Brother could install readers in every doorway of every public place and track everyone reading The Communist Manifesto in the first place, if you're paranoid you should realize that if you work in an office an have an access card, you probably already carry an RFID chip.

Sometimes it makes no audible difference at all (to my sensitive ears),
other times it makes a noticeable difference. As you might expect, it
depends on the strength of the signal; if the signal is strong I don't
need the external antenna, while if the signal is weak the antenna can
make the difference between making the broadcast audible or not. All in
all, I'm satisfied with it.

Is it a joke or what? I knew my lamps were acting strange. LOL.

BBC NEWS

Vatican Radio officials convicted
A Roman Catholic cardinal and a priest in charge of Vatican Radio have been convicted of polluting the atmosphere with powerful electromagnetic waves.

Cardinal Roberto Tucci and Father Pasquale Borgomeo were given suspended 10-day jail sentences.

The Italian court also ordered them to pay damages and court costs.

Two scientific studies have suggested a field of Vatican Radio broadcasting antennas north of Rome may have caused high rates of cancer in the area.

The first, in 2001, found that magnetic fields around the transmitters were much higher than normal limits allow.

'Electro-smog'

The giant masts beam news programmes worldwide in 40 languages.

A first trial was stopped in 2002 when a judge ruled that Italy had no jurisdiction over the radio station because it was part of the Vatican City, an independent sovereign state.

But that decision was later overturned and Cardinal Tucci, the station's preside
nt, and Rev Borgomeo, its director general, went back on trial.

"After so many delays and so much wasted time, today we have achieved an important success which underscores the need to protect people from the risk of 'electro-smog'," said Roberto Della Seta, chairman of environmental group Legambiente, after the verdict.

'Stunned'

Raffaele Capone, who heads a residents association in the Cesano area, said: "We hope that it will be removed from our territory so that we can finally live in peace."

Some residents complained the transmissions were so strong they could hear radio broadcasts through their domestic lamps.

However, Vatican Radio programme director Rev Federico Lombardi said: "We're stunned".

He vowed to appeal, saying emissions were within international limits and "in line with accords between Italy and the Vatican".

The judge said the level of damages payable by the defendants would be set by a civil arbitration body. It could run into many millions of euros.

You're right, of course. Ignorance, intolerance and stupidity *ARE* easy traps to fall into, however. I should have watched my steps more carefully and will try to do so in the future. Watching the authorities step around all the doggie doo after one of 'hulin's debacles should have been lesson enough.

GM sues Chinese firm for copying

http://news.bbc.co.uk/2/hi/business/4528565.stm

General Motors is suing a former unit of Shanghai Automotive Industry Corporation for copying a car design.

GM Daewoo, a South Korean unit of GM, said China's SAIC Chery Automobile had copied the Daewoo Matiz's body structure in its Chery QQ model.

The Korean firm said it wanted 80m yuan ($9.7m; £5.1m) in compensation.

The case - accepted by a Beijing Court, according to Chinese state media - is sensitive because GM and SAIC are involved in a major joint venture.

Damage limitation

The QQ appears to be similar to the Daewoo Matiz (and to GM's Chevrolet Spark, which is based on the Matiz).

GM Daewoo said tests showed the body structure, interior and exterior design of the QQ and many of its components were very similar to the Matiz. It added that many parts were interchangeable between the two cars.

SAIC Chery denied the allegations, saying it spent more than a year developing its QQ car. It added it has up to 24 design patents on the model.

GM Daewoo began suing Chery last December in Shanghai, but transferred the suit to Beijing after Chery complained on jurisdiction grounds.

GM Daewoo had tried to resolve the dispute through mediation for a year and only resorted to the courts when this failed, the company said.

SAIC, which spent £67m buying car designs from collapsed UK carmaker Rover, held a 20% stake in Chery.

But it sold the holding late last year in what was thought to be a damage-limitation exercise.

This is real, BBCWS reported it in a short item at 0200 UTC in the news bulletin just before The World Today, but this article gives a lot more detail. I don't think there's any proof that SW radio transmissions can cause cancer, the only link between EMF and cancer is cell phones, and those have to be held right next to the body for a long period of time before any negative effects occur. I don't deny that living next to a transmitting tower can royally fuck up your radio and TV reception, San Franciscans who live next to that city's Sutro Tower have to enclose their stereos and TVs in steel to shut out spurious RF. One time I went up on Mt. Sutro with a transistor AM/FM radio and it sounded like the Tower of Babel, lots of stations where they shouldn't be, TV audible on FM, sometimes three stations occupying the same spot. But I don't think there's a significant cancer risk, or that it constitutes "electro-smog". The bad reception is just a consequence of living next to a transmitter, and the only real solution is to move. One last note: it is possible to get radio transmissions on metal objects if they harmonize correctly with the signal. I heard once that a metal pigsty in Rampisham, England, picked up the BBCWS transmissions emanating from a transmitting tower next door. The pig rancher said that the low murmur soothed his pigs.

Shit happens during war. On the whole, American soldiers were MUCH
better behaved during WW2 than during Vietnam or Iraq, especially
towards the local populace. Why this is, I don't know. General social
breakdown in American society?

It is a modem used to decode some digital over-the-air radio transmissions. It is several years old, and was superseded by the 7000 which is also long out of production. There are not many digital transmissions left that those units can decode. Much of the traffic has moved to satellites or is encrypted.

Decoding digital utility transmisions was a lot of fun. FDM, TDM, russian rtty, press services, you name it...it was out there waiting to be decoded. Sadly that time has pretty much passed. I would not bother with the M6000.

< Snip rant >

I don't care if you care. I just wanted to know if you were a waste of time or not. What make you think that you can just start posting flames to the news group and offer no on topic content and expect people to want to read you? You have no standing in the news group so nobody has a reason to care what you think.

You are a total jerk.

You would not believe what goes on in the desert at night!!!

I take my motor home out in the desert a lot of nights and just listen.

I have my AFRB with me all the time.

The main problem I have with your reasoning is that there has not been another terrorist act in the USA since 9/11 so it is either the increased security or the fact that we are keeping them busy in the Middle east, unless you have another explanation.

I don't think it can be said their hasn't been another terrorist
attack here (presuming you mean from non US citizens) since 9/11.
There have been intrusions via cyberspace, though of very limited
success, as well as those who still are tyring to 'tickle' the
electrical grids and wreak some havoc. My estimation is that future
attacks will be against other segments of our infrastructure;
communications, financial systems, utilities and such. The increased
security for air travel is not necessarily responsible for this so
much as a change in targets and tactics and yes, as you mention -
keeping them busy elsewhere.

Just my $0..02, other opinions may (and I'm sure they will) vary.

What kind of spoilers ar you talking about? We know all the Jedis get
killed except for Obi-wan and Yoda, we know Nathalie Portman will die,
and Anakin becomes Darth Vader. Except for some filling in the holes
I really don't see anything major in the way of spoilers.

If that was a record, it fell today -- 96 shots fired at a
wacko, but unarmed man in a van in Compton, CA. He was hit four times
(great marksmen that they are). Watching the 18 seconds of shooting on
TV, you have to wonder why some cops weren't killed as they were
arranged as a circular firing squad.

Of course it took many fewer shots a few weeks back to waste
another unarmed wacko who had the temerity to brandish a rock at the
CHP in San Mateo, CA.

Always wear a quick-release buckle on your pants so you can
quickly turn yourself out. They'll require that if you show any sign
of asserting your rights. I assume you mean "compliant" as in the
phrase "compliant wench".

>- However, if Citizen is Aggressive and non-compliant

Actually they're psychotically addicted to "maintaining
control" including considering the citizen to be hostile if they so
much as say "What?" to an ill-phrased question. It's as if you were
challenging their intelligence to misunderstand them.
> .

Somewhere on the ARRL site they have a nice, extensive color
spectrum poster. Take the file to Kinko's or similar and get it
printed up fullsize -- 11 x 17 or thereabouts.

OK, I didn't find it there, but I think this is it:

<http://www.ntia.doc.gov/osmhome/allochrt.html>

I believe it's also published periodically in QST.

There's something similar at

<http://www.thinkgeek.com/cubegoodies/posters/techie/6b15/>

... but I haven't seen it in person.

>>
>>
>$1,000.00

Varies -- mostly depending on what kind of wood frame.

Save your money -- see <http://geoclock.home.att.net/> -- it's
the Geochron clock in sofware, but does far more than the original,
wall-hung version. Usual disclaimer -- no connection to the company,
just a long-time, extremely satisfied customer since the first
shareware version many years ago (now at v8.4).

This is absolutely the best and most useful piece of software
I've ever bought, version after version. Hardly a day goes by that I
don't use it at least one time.

It has a huge selection of zoomable maps. Extremely
customizable. Can switch between displaying city names and counry
names / natural feature names. Allows you to set cursor anchor point,
then move cursor while displaying direction and distance of cursor
current location. Variable update intervals, from realtime to one day
per update. (watch sun trace the analemma throughout the year by
setting updates at 24 hours). Lat/long grid display, sun/moon icons
and dislay of their respective subsolar/sublunar points, as well as
alt/azimuth directions.

Download the 30-day demo, but be warned -- it's a pale imitation of any level of the purchased product. It only has a few maps and zooms in just once to the US, or flips to a polar or from-space view if you click outside the US. The full versions will zoom in multiple times to nearly anywhere in the world.

Prices range from Basic ($25, downloaded) to $90 (Pro with Ham Package, CD + diskette -- see <http://geoclock.home.att.net/ham.htm>). Briefly -- The package includes a custom Azimuthal-Equidistant map centered on your ham station, a call sign data base, and utility programs.

For maximum convenience, get the latter package -- you will not regret it. Skip the ham package if you're not a licensed amateur. Updates, when they occur are quite cheap compared to most other software.

I repeat -- I have no financial interest in the company. But I have gotten more, and more constant, use out of Geoclock than any other piece of software I own. OK, except maybe mail and newsreaders and web browsers.

I've also never seen a better tool for making geography clear to kids.

1109. Jimmy Buffet channel coming to Sirius

Newsgroup: rec.radio.shortwave
Date: 2005-05-10 12:10:01 UTC
From: David <rickets@knac.com>
Message-ID: <t3918152hlcr7rq6oel01lji7lplri0u0d@4ax.com>
Source record: 21794

Jimmy Buffett launched Radio Margaritaville in 1998 as an Internet-only channel, which will still be available at www.radiomargaritaville.com. Now, for the first time, Jimmy Buffett fans across America can hear the channel in their cars, on their boats and on the go by becoming SIRIUS subscribers.

SIRIUS will also broadcast Radio Margaritaville live on a regular basis from a studio located at Buffett's Margaritaville restaurant at Universal City Walk in Orlando, Florida. The channel is expected to broadcast from its other Margaritaville Cafes and Restaurants currently located in Key West, New Orleans, Las Vegas, Jamaica and Cancun.

As one of today's most successful artists, Jimmy Buffett performs sold-out concerts worldwide and has recorded forty records, most of which have gone gold, platinum or multi-platinum. Jimmy's newest CD, License To Chill, which debuted at #1 on both the Pop and Country charts, was the first number one record of his career, spent 15 weeks in the Top 10 of the Billboard Country Albums Chart, and has been certified platinum by the RIAA.

Also an author, Jimmy's new novel, A Salty Piece Of Land, was released and immediately entered the New York Times Bestseller List. The New York Times said it "is very possibly Buffett's best work to date." With Jimmy's three previous No. 1 bestsellers, he is one of only six authors in the history of the New York Times Bestseller List to have reached No. 1 on both their fiction and non-fiction lists.

The arrangement with Jimmy Buffett is the latest SIRIUS endeavor to provide its subscribers with unique, proprietary content featuring some of the most popular and intriguing personalities in entertainment.

I find the Bush Administration to be one big, long terrorist act
against the United States. (BTW: The anthrax mailing wasn't a
terrorist act?)

The fact that there hasn't been another 9-11 lends credence to the
theory that Bush was responsible for the first one.

The courts have ruled that that silly phrase has been thrown around so
much it has no inherent meaning.

God is a cop-out. It is used by ass-hole as an excuse to control
people. It is a luxury we can no longer afford.

My physical appearance has nothing to do with it.

''Truth'' has no meaning.

Actions and reactions are what matter.

We are being screwed-over by the fat cats. I'm more religious than
George fucking Bush. He is using the lunatic fringe to achieve his
greater end of returning control of this country to the pre-revolution
merchant class.

If you need an antenna for LPFM or LPTV email US first!

Made to your specs or from proven designs. Dirictional or omnidirectional designs available. Free quote by email, free email tech support after purchase.

Detailed assembly instructions with photos make it a cakewalk to set up the antenna. As much preassembly done as possible to speed things up.

Hundreds of antennas sold on ebay and at hamfests, hundreds of happy people using them. Email us today for a quote on an antenna made just for your application!

First, it is unfair to put the word inspection in quotes as if it were sarcastic. There is a genuine inspection - of ingredients, equipment, packaging, etc. - involved in kosher supervision. Sometimes this inspection requires travel to places where the ingredients are produced, processed, and/or shipped.

Second, the money involved is almost microscopic (except for meat and poultry, which requires repeated inspections of each animal individually for kosher certification). And a food processor is able to self-certify, without paying any outside organization, if he has qualified people on staff (in which case he used a plain letter K - without a circle, star or other emblem). I have gone to my supermarket and compared the prices of differing brands of the same item - those with and without kosher certification - and those with kosher certification were not so much as a penny more expensive (and were sometimes a few cents cheaper) than the non-certified brands. One reason is that, in a practical sense, kosher certification operates much like a celebrity endorsement for getting more customers.

Just curious,

Has anyone here built their own shortwave receiver? Something comparable to a low-end commercial receiver, (perhaps no FM though) no audio amplifier section either. (Just pre-amp) Something very modular so you could experiment with filters and things along the stages.

Years ago.. I had a ton of books on the subject, but they were tube-technology and in all the moving I've done.. most were thrown away.

Is it possible using these tools:

Cheap, crappy oscilloscope. (old tube-type, basic, it drifts as it warms up)

Circa 1955-1965'ish RF generator. (analog tuner, tube based, might not even work)

TTL puls gen.

High-voltage power supply.

Clunky soldering iron.

That is what I'd have to work with if I tried it, the reason I discarded so much of that old stuff is that it's just too expensive to experament. (and all the math gave me a headache!)

Something a little better than those "spring kits", should use crystal oscillators NOT regenerative. Ideally a web resource some place that I haven't already googled, with "alternate plans".

Can't really justify spending much $$ on something like this.

Big deal! I've been carrying one since 2003. All active DOD personnel
both military and civilians carry one. I'm sure the rest of the Federal
Government use them also.

Up for a challenge? QSL my very low power beacon.

Frequency: 13.5608 mHz +/-25 Hz.
Power: 4.0 milliwatts
Antenna: 17' vertical
Modes: 12 WPM CW alternating QRSS3 approximately every 2 minutes.
Power Source: Solar Power
Location: West Clarksville, New York, USA

Valid screen captures or audio recordings will be rewarded with a nice
e-QSL.

--

Visit the new Unlicensed QRP website and forums: http://www.qrp.timpauly.com
The site and forums are geared toward legal, unlicensed (non-ham) radio
operation for low-power hobbyists around the world.

1152. LPTV station on Channel 6 in NYC

I've seen these on UHF but never on VHF. I saw color bars and heard a tone Monday evening.

From responses to email sent to Glenn Hauser and usenet postings and some Googling it is probably Island Broadcasting, WNYZ-LP, on top of the Citibank (or maybe Citicorp or Citigroup now) building in Long Island City (Queens). They already have a few stations on UHF. The programming is probably going to be mostly ethnic.

1153. New forum and site for legal, unlicensed low power radio hobbyists.

Why verboten? I never said you couldn't talk about sat. radio. You can talk about anything you want. It just seemed to me you'd want to find an audience that was actually *interested* in sat radio...but that's before I realized you were a troll.

So in posts, to return to insults like your's, shall I consistently start to call America "DUH-merica"? and Americans "Dumb-mericans?, when ever I feel they are being stupid on the basis of nationality or insulting to to mine? You might as well say you only meant to call 'that' Mexican a "wet back".

FWIW, it creates enmity to post like you did above. You also offend those who you (apparently) did not intend to insult, even as you almost apologise. Posts like this win you no friends (even as someone will inevitably post that your country doesn't care and doesn't need any others). And TROTW (the rest of the world) says "Ugly American" and worse, and sympathises less with your trauma.

O Canada - God forgive America.

That's great! That reminds me when I used to listen to Radio Praha back in the 80's. They sent me the most beautiful New Year's cards and even a 45 record of some Czech politician! And yes, their QSL cards are quite special aren't they?

Radio Praha accept email reception reports, but I'm guessing they regard postal reports more highly! A great station indeed.

Keep listening...

Greg (England)

I tried to reply off list- but looks like you have an anti-spam address.
Lots of people are building their own receivers- and many of them above
average designs.
I have posted this before, but here it is again for those that may have
missed it:
http://www.parelectronics.com/pics/w7zoi13jpg.jpg
http://www.parelectronics.com/pics/w7zoi14.jpg
http://www.parelectronics.com/pics/w7zoi15.jpg
http://www.parelectronics.com/pics/W7ZOI11%20copy.jpg

5/2.5/.5 KHz homebrew xtal filters; selectable and defeatable AGC; tone;
audio notch filter; preset BFO for USB/LSB/CW; AM detector; S meter

Loosely based on W7ZOI Progressive RX from the late 1980's.

Look also at Pete KE9OA's neat receiver on his site and many others.

73,

Dale W4OP

Many radios have a 455khz output. Building your own demod might be the place to start. These days you could even do a digital demod. For AM, you could phase lock your sample clock (oversampled) to the carrier and do a decimation demod. Nothing obvious pops into my mind for a digital sideband demod.

Also true, considering that that's how American troops are trained to
fight. But fighting an insurgency instead of an army is no excuse for
many of the outrages perpetrated by US troops in Nam and Iraq.

I couldn't find Pete's web site? (I did a google for KE9OA)

Would you say it was rewarding to do something like that? What were the costs
and such?

Did you build the case yourself too?

Seems like it would be fun to do something like this, but whew! where to start?

How about multiple clocks on the wall, one for each time zone. You could use funny city names for the time zones, like Pahrump for Pacific time, Pasaic for the east coast, etc.

Some people apparently are passionate enough about radio to want to hear what's up on the 250 digital channels being rained-down on us from outer space. Personally, I'd pay $13 a month just to get the BBC World Service anytime, anyplace in North America.

Yes, my apologies for not including the callsign. The callsign is "P". It is a short callsign because of the keying circuit I am using. Formerly, the beacon was known as "RAD" in Radford Virginia and was heard in several states.

My guess is it would cost less than $13 to repair your antenna. Then
you could tell Sirius to shove it.

Do you really listen to music on your "smart phone"? And, if you do,
how does that materially differ from having a Sirius radio
subscription?

It gives me access to everything on the internet, not just the
commercial crapola that's available through Sirius.

Steve

But -- and I'm being serious now, I'm not arguing -- can you listen to music over your phone in anything resembling hi-fi sound? Is it a realistic medium for music? Unless something has changed drastically lately, then it's not. You're critical of people that pay for the Sirius service, because you consider it "commercial crapola," but your solution requires the payment of a monthly fee, too, but it doesn't allow you to enjoy music through it. What am I missing here?

The beacon list that existed on LWCA.org is gone, so I don't know where that beacon is located, though I do remember it from the list.

The fact that no updated beacon lists or forums specifically for this type of operation exist any longer is why I decided to start my Unlicensed QRP site and forum.

No, it was in the mainstream press, off one of the wire services.
There was a enough harassment of non-Christian students that they
complained. And the guy in charge is an evangelical who set up
code phrases that fit in with the fundy system of thought. And
instructors were "testifying" in class.

Mental Illness, Eugenics agenda of US Courts

A little more than three years ago, the US government while still under Clinton approved $40,000,000 for the the establishment of over 100 'mental health courts' to be ready by 2005. Just recently the US government has approved $20,000,000 to 'screen' the US population for 'mental illness'. Forced psychiatric medication is just around the corner. (Remember the Bush family are major shareholders in Ely Lilly)

http://www.freerepublic.com/forum/a3a6dd4d47fc8.htm

SOVIET STYLE MENTAL HEALTH COURTS IN U.S.
MEDIUM RARE By Jim Rarey

The Congress has quietly authorized establishment of not more than one hundred(demonstration) mental health courts in the United States. An amount of $40,000,000 (over four years) was authorized to set up the courts under the supervision of the US Justice Department.

The original bill (S1865) was sponsored by Sen. Mike Dewine of Ohio and co sponsored by Sen. Domenici of New Mexico, both Republicans. However, it was rewritten by Sen. Orin Hatch (R. Utah) in his Senate Judiciary Committee and reported to the floor without a written committee report.

The bill passed the Senate on Sept 26, 2000 under "unanimous consent" (without objection). The House adopted it on Oct. 24th by voice vote under a suspension of the rules. President Clinton signed it into law on Nov. 13th.

Thus, there is no record of how anyone voted on the measure or how many were present at the votes.

That's the history. Now for the law's provisions.

The law would apply to all "preliminarily qualified offenders" defined as persons having, "previously or currently been diagnosed by a qualified mental health professional as having a mental illness, mental retardation, or co-occurring mental illness and substance abuse disorder, or manifest obvious signs of mental illness, mental retardation or co-occurring mental illness and substance abuse disorders during arrest or confinement or before any court.."

The term "mental illness" means a diagnosable mental, behavioral, or emotional disorder that meets diagnostic criteria within the most recent edition of the Diagnostic and Statistical Manual of Mental Disorders published by the American Psychiatric Association.

It provides for continuing judicial supervision, including periodic review of "preliminarily qualified offenders" who are charged (not convicted, but charged) with misdemeanors or nonviolent offenses. The list of offenses that would subject a person to the jurisdiction of these "mental health courts" is to be developed by the Attorney General in consultation with the Secretary of Health and Human Services and any other officials deemed appropriate.

The law also provides for "centralized case management" involving, "consolidation of all of a mentally ill or mentally retarded defendant's cases, including violations of probation, and the coordination of all mental treatment plans and social services, including life skills training, such as housing placement, vocational training, education, job placement, health care, and relapse prevention for each participant who requires such services.."

Would opposition to a "Gay Rights city ordinance" be enough to bring one under the jurisdiction of a mental health court? You bet. For years the American Psychiatric Association classified homosexuality as a mental disorder. About fifteen years ago they dropped that and added "homophobia" (disapproval of homosexuality) as a mental disorder. If this law were enforced as it is authorized to be, that would be evidence enough to make the person a "preliminarily qualified offender." Off to mental health court he would go.

You say it can't happen in America. Well, it is.

Permission is granted to reproduce this article in its entirety.

The author is a free lance writer based in Romulus, Michigan. He is a former newspaper editor and investigative reporter, a retired customs administrator and accountant, and a student of history and the U.S. Constitution.

The House Appropriations Committee Funds President's New Freedom Commission Initiative That Includes Plan To Screen All U.S. Citizens For Mental Illness -

The House Appropriations Committee approved $20 million in new federal dollars to begin implementation of the plans set forth by the New Freedom Commission on Mental Health (NFC) to get every man, woman and child in America "screened" for "mental illness."

Amidst broad public concern that many of the antidepressants being prescribed to Americans are under federal investigation for causing suicidal reactions, the New Freedom on Mental Health Commission's campaign for national mental health "screening" - will result in millions more Americans being diagnosed with fraudulent and unscientific mental disorders, and prescribed dangerous and deadly psychiatric drugs.

$20 million has been approved by the House Appropriations Committee for "State Incentive Transformation Grants," in order to begin nationwide implementation of the New Freedom Commission on Mental Health's plan.

The Commission based its findings on the definition of mental illness as defined by the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders (DSM).

jd,

Count up all the ID you had when you turned 16 (or 18 or whatever) and went to get your drivers license. Most people have MAYBE 2 pieces (birth and baptismal certificate), a large percentage have only a birth certificate.

The problem with RID is that you will have to somehow magically come up with four pieces of ID in order to get the first one.

To obtain a passport generally requires birth certificate and drivers license, at the very least. So you won't have that to show to get your drivers license. Social Security cards are not accepted as ID. Nor are library cards. In some cases, student ID cards have been accepted as ID to get a drivers license, but not in most states, and RID is pretty much putting the nix on using anything like that as ID to obtain a DL. Most don't have DOD cards, and minors don't have medical insurance cards, corporate ID, membership or credit cards. Most of those are not acceptable even now as legitimate ID for obtaining a DL.

They're opening up a can of worms that I'm sure will incur the wrath of all 50 states (especially given that the states will now have to use the additional time and manpower to verify each of those four pieces of ID for each person applying for a new or renewal D/L). Not to mention I'm sure the ACLU will plunge headlong into the fray.

You night want to just get a variable voltage power supply
that plugs into a lioghter socket. I just picked up a Vector VEC009 dc
- dc converter the other night in a Walgreen's. About $10. Wanting to
see what else the outfit made, I went online later and found they;re
available in many places for about $5, plus shipping that might make
the $10 I paid look OK.

Its output is switchable fom 1.5 to 7.5 volts in 1.5v steps,
followed by 9 and 12 volts. 2000 mA max; 14W max, for what it's worth.
I'm sure there are many others available.

As I like to run other things off lighter plugs (computer, GPS
unit, etc.), I have a 3-outlet expansion plug. Since I prefer not to
run stuff off the possibly spikey car lighter socket and have it all
come up or down every time I turn the ignition on or off, I run the
whole mess off the lighter socket in one of the car jumper battery
units that has a gel-cell and jumper cables. Easy to keep charged up
at home and avoids the possibility of draining the battery if you
leave it in and have the kind of lighter socket that's still hot when
the ignition switch is fully off.

One interesting quote on his website which sorta ties into parts of
the SW hobby/hobbies:

"It's like the old pirate radio stations that sat offshore and played
what they wanted."

Of course, with XM or Sirius there's still a gatekeeper although the
gate is less restrictive than those that the FCC or the broadcasting
conglomerates are putting up. (I believe XM is partially owned by
Clear Channel.)

Netcasting, on the other hand, has almost no gate.

Why isn't the religious aspect of the product plainly marked on the package? On one occasion I wanted to buy breakfast cereal. There was NO other choice but Kosher certified food. Same with margarine. Would you like it if, say, the food you were buying supported some murderous hash smoking assassin sect in San Francisco and you weren't made aware of it? What if the moonies had shelf space monopoly on the foods you buy regularly? Why are there not choices available to the consumer? It's only fair marketing practice.

I don't care if the food supports Jews, Muslims, Christians, Hindus or even Mormons, but I should be informed of who it is I am supporting...anything else is dishonest.

I don't see your beef here. It's a certification. Nothing more. It's not 'supporting' anyone, it simply lets people know that the food is allowable for them to eat. Is this any different than foods labeled for diabetics or such? You may be interested to know that foods are also labeled for consumption by Islamics as well. The equivalent term is "halal", meaning "allowable". Lots of foods that are generally eaten by everyone may or may not be kosher/halal. Just because they are marked kosher/halal does not mean they are specifically for, or supportive of, any particular religious sect.

They've been legal on VHF for decades. However, they haven't been legal
on channels adjacent to local full-power stations until very recently.
Since every other channel is already in use in NYC by full-power
stations that pretty much made VHF off-limits for LPs there until recently.

We had one on channel 5 in Madison, Wis. back in the early 1980s, and
that was by no means the first.

Have any of these chicken littles actually bother to figure out how much information these paranoiac schemes will generate? They will need to construct an entire internet just dedicated to the polling and registering of incoming data. Any attempt at using the current systems will grind them to a halt with all that traffic. This will be a Herculean feat for the forseable future. Let alone the storage of the data.

WAYNESVILLE, N.C., May 10 (AP) - A Baptist preacher who was accused of forcing nine members to leave his church because they refused to support President Bush said on Tuesday that he was stepping down.

"For me to remain now would only cause more hurt for me and my family," the preacher, the Rev. Chan Chandler, said as he left a meeting at East Waynesville Baptist Church.

Source record: 21859

Hi All,

I would like to acquire a radio with AM sync detection. I'm not too concerned with the size of the thing since it will primarily be my bed side receiver. Could those who have used them give me some feedback concerning the relative quality of the Sony 7600GR vs. the Grundig Satellite 800 or any other receivers out there which have their own built in antennas? Due to lack of room and too many antennas in the air already, I need something which does not need much beyond its whip antenna or 20 to 25 feet of wire laid along the floor and hung out the window.

Thanks much in advance for the help.

The Sony ICFSW-07 Has Sync and
is small enought for a shirt pocket.

The package includes an
AC adapter, and an AN-LP2 active window antenna.

Great for a traveller.

1230. Re: Radios with AM Sync Detection

"Could those who have used them give me some feedback concerning the
relative quality of the Sony 7600GR vs. the Grundig Satellite 800 or
any other receivers out there which have their own built in antennas?

JS> IMHO the radio with the best sync detector is the Sony 2010. The
combination of selectable sideband detector, two filters and 100hz
tuning accuracy makes for a high performance portable. They can be
found used on Ebay.

I would compare the 7600 to the Yacht Boy 400 and Sangean ATS909 and
not to the Satellit 800. The first three are of comparable size and
audio quality. The great sound quality and other features of the 800
comes at a much higher price and in a much larger package.

I used a 2010 with sync detector for about 6 years, and to be honest I
came away with mixed feelings about the real value of selectable
sideband sync detection. In many hours of listening I found only a few
situations where that feature could make a difference in audio quality,
but in no situation did it extract a listenable signal where none could
be gotten in AM mode. I found detuning slightly and switching filters
could do as well or better most of the time. Another issue is that the
sync detector on every radio I've tried seems to introduce it's own
noise level...it is usually a slight hiss, but it is there.

Take a look at the detailed reviews of those four receivers on
http://www.radiointel.com/reviews.htm
as well as the numerous and somewhat varied reviews on
http://www.eham.net/reviews/products/8

Of the three comparably sized portables I would probably give the nod
to the 7600 because I've used it's predecessors and found them to be
built with a lot of attention to detail and to receive AM and SSB very
well. I'm not a fan of push button tuning, but I could live with it.
A close second would be the Sangean mostly because of it's tuning knob.

1231. Re: Radios with AM Sync Detection

Newsgroup: rec.radio.shortwave
Date: 2005-05-11 14:58:31 UTC

Message-ID: <42821DA3.1A92@mindspring.com>
Source record: 21864

The 7600GR is good for the price. It introduces noise on _weak_
signals but most places you want sync detection aren't weak, but
rather selective fading (carrier fades below sidebands resulting in
audio distortion, try Radio Japan from Sackville without synch
detection and see what I mean) and adjacent channel splatter, which
you simply select the opposite sideband for. I've seen the 7600GR
as low as $99 on clearance and snapped up a couple extras.

The 2010 cheats a little by automatically turning off the synch
detection on weak signals, not that that isn't a good feature.

The other radio I know about synch detection on is the Drake R8B,
which is superb. I listen to AM all the time and it's always with
synch detection on, never with it off.

I didn't like the Satellit 800 when I had one for a few hours, owing
to its clunky size and large audio hum on the MW band from the power
supply that came with it; so didn't particularly pay attention to the
synch detection.

My brother has a Universal Satellit 800 and it is a fine radio,
particularly well suited to MW DX reception.

I've seen those too, Radio shack sells them for ~20. Thanks for the tip!
(Glad I didn't buy one!)

Is it one of those "switched" power supply deals or does it use voltage
regulators?

Haven't really found a good source of info about PLL, (well, "good" in the
sense that someone like me could understand it!) Is it PLL that gives
a radio the ability to do continuous coverage w/out having to switch
bands? (among other things)

The "band switch" is something I'm confused about.

In addition to the radios already mentioned, you might consider the Drake SW8 (later models had synchronous selectable sideband, whereas earlier models the sync mode was not sideband selectable) or the Sony ICF-SW77. Both of these models have been discontinued, but if you can find either a decently priced used, might be worth considering. The 7600GR would probably represent the best value for money, however. But then you're looking at less in way of features. I use all three of these radios, plus a '2010. I tend to use the SW77 more than the others, simply because it's more portable than the SW8, and I tend to use the radio out of doors quite a bit. Plus it's better on batteries than the '2010 and I tend to prefer the tighter bandwidth filters of the SW77, regardless of the somewhat downgraded audio as compared to the '2010.

Afraid I don't know too much about the Satellit 800, however. When it came out years back, I thought that it was to take the mantle of the SW8, but I've read so many reviews on this product that seem to go one extreme or the other, either lovin' it wholeheartedly or hatin' it altogether, that, if you decide to go with the '800, you might consider buying it on a basis whereby you can readily return it if it's not your cup of tea. Also, the Eton E1 (what was earlier to be the Grundig Satellit 900) is presumably to be released in June (this model is best known for its annoying habit of repeatedly pushing its release date farther and farther into the future).
http://www.universal-radio.com/catalog/portable/0101.html Looks nice, but I'd be hesitant to be one of the first buyers of this model, given the experience of some of the early buyers of the Satellit 800 (presumably a lot of kinks in production of the '800; reportedly quality control issues were remedied later; but a lot of people...according to reports...got their hands on lemons).

I'm not quite sure what you mean about no plainly marked. The kosher certification is plenty visible if you bother to look for it, otherwise it's a waste of money and effort all around.

There are over 300 kosher certifying organizations in the US, so the fees charged for the inspection and certification are kept low. The fees pay for the service, not for a religion. Koshering inspectors may not be the most interesting personalities but I doubt they include more than one or two hash smoking assassins in the whole bunch.

The thing I like about the HIFER beacons is that since they are such low power one
gets to detect the subtleties of propagation.

1259. Clinton Lied About WMDs

Newsgroup: rec.radio.shortwave
Date: 2005-05-11 22:14:32 UTC
From: LC <LC@ccp.gov.cn>
Message-ID: <1185109ijlrfl7a@corp.supernews.com>
Source record: 21894

Clinton Lied About WMDs

http://www.newsmax.com/archives/articles/2005/5/9/233833.shtml

U.S. defense officials believe that North Korea is preparing to test a nuclear bomb in June. According to satellite data, the North Koreans are building a reviewing stand and filling in a deep mountainside tunnel, both signs of a potential underground nuclear test.

On May 1, 2005, North Korea fired a new missile from its eastern shore over the Sea of Japan. The newly developed cruise missile is estimated to have a range of 60 miles and is large enough to carry a nuclear warhead.
The new missile test revived fears about Pyongyang's nuclear capabilities. The missile launch followed Pyongyang's abrupt decision in April to shut down its main nuclear reactor at Yongbyon. Western defense officials fear the move could be a prelude to the extraction of fissile material for additional atomic weapons.

President Bill Clinton's secretary of state, Madeleine Albright, said the United States had missed opportunities to defuse the crisis brewing on the Korean peninsula.

"I'm very concerned about the box that we are now in with North Korea," said Albright.

Of course, Albright previously called North Korean dictator Kim Jong Il a "charming" guy and a "good dancer." Albright based these well-chosen comments on the one and only time she visited the ironclad dictatorship, when she danced the night away with the dictator in a gala ball-like atmosphere.

Clinton Non-policy

While Albright has tried to pin the current crisis on George W. Bush, the fact is that her commander-in-chief, Bill Clinton, was too busy lying to the nation about sex to bother coming up with a rational policy on North Korea.

President Clinton tried several failed policies to appease North Korea. First, by using Jimmy Carter, he attempted to bribe North Korea into halting its nuclear weapons programs.

Carter, Clinton's personal emissary, met with Kim and came back waving a paper, declaring peace in our time. Despite winning the Nobel Peace Prize, the one-term president held confused and hopeless negotiations with the Democratic People's Republic of Korea (DPRK, or North Korea) that resulted in a total failure.

At one point Carter declared that North Korea had no nuclear weapons and then, a few months later, he declared that North Korea would give up its nuclear weapons if the U.S. disarmed itself.

Clinton Lied About WMDs

When it became apparent that the Carter peanut plan had failed, Clinton resorted to his old forte ◆ lying to the nation. Clinton tried to ignore the North Korean threat, declaring that the tiny nation did not have long-range missiles and could not develop atomic weapons.

Clinton also had others lie to support his false assertions. In 1998, Clinton twisted arms inside the intelligence community. The result was a politically motivated and thoroughly untrue CIA report that the DPRK would not be able to deploy a missile capable of striking the U.S. for over a decade.

The CIA report supplied in 1998 by the Clinton administration estimated that North Korea would require 10-15 years to develop a missile capable of delivering a chemical, biological or nuclear warhead.

The Clinton policy toward North Korea came apart when his Pentagon chief of staff declared in the summer of 1998 that there was no indication of a missile threat from the DPRK. One week later North Korea launched a Tae Po Dong missile over Japan that landed off the Alaska coast.

Of course, Clinton was not just lying to America. He also lied to our Asian allies. The CIA had satellite data showing the Tae Po Dong being prepared for launch but elected not to pass that data onto Japan or South Korea.

Thus, the view inside Tokyo changed because of the North Korean missile passing overhead. Instead of trusting America to relay accurate intelligence information, Tokyo decided to rely on its own data, no matter how much it cost. Japan now orbits its own intelligence satellites, which monitor North Korea and China.

Appease the Monster

Of course, many like Madam Albright still believe that appeasement is the best policy to deal with "Dear Leader" Kim Jong Il. Such a policy is not only silly but also dangerous.

The DPRK under Kim has engaged in some of the most heinous activities in global proliferation and criminal activities, ranging from kidnapping to open terrorism and murder.

For example, Australia currently holds several DPRK diplomats caught smuggling heroin into the land down under. The DPRK is also a prime source of tons of illegal methamphetamines to Asia.

North Korea has also sold missile technology to Pakistan, Libya, Iran, Saddam's Iraq, Taliban Afghanistan and Syria. The DPRK also sold nuclear weapons technology Libya, Iran and Pakistan.

One result of the recent North Korean admission to a nuclear weapons program was a choice between two evils for U.S. Asian allies. Either submit to North Korean blackmail or build nuclear weapons. This bitter choice faced by Seoul and Tokyo would mean more atomic weapons and expanded political unrest.

Instead, President Bush has given our Pacific allies a third, non-nuclear, option to join us in a missile defense. The brilliant move gives Japan and South Korea a way of defending themselves against North Korea without having to take up nuclear arms.

A nuclear test by Kim will certainly spur Japan and other Pacific states to seek more defenses. Such a test may also spur other Pacific nations that are currently reluctant to join a missile defense with the U.S.

It is said the best motivation is enlightened self-interest. A mushroom cloud over North Korea is likely to be a great motivator.

1261. Communist China Expands Spy System

Communist China Expands Spy System as Its Military Power Grows

http://www.bloomberg.com/apps/news?pid=10000087&sid=a38FtMxfEJng&refer=top_world_news

May 10 (Bloomberg) -- China is improving its far-flung system of human spies, recruits, sleeper agents and electronic eavesdropping in tandem with its buildup of conventional military power, according to a new Pentagon report and analysts.

China since the mid-1980s has developed the world's third- largest capability, after the U.S. and Russia, to intercept conversations and messages, according to the ``Intelligence Threat Handbook'' distributed to Pentagon personnel.

``The more they have an advanced intelligence capability, the more concern there is about China's military and weapons,'' said Jeffery Richelson, author of ``The U.S. Intelligence Community,'' which is in its third edition.

``This makes China's strategic clout greater and demonstrates why many nations, and many Americans, are concerned about a future threat from China,'' said Larry Wortzel, a defense fellow at the Heritage Foundation and former China analyst for the Defense Intelligence Agency.

China, for example, recently fielded a new land-attack cruise missile similar to the U.S. Tomahawk that will require precise coordinates of targets as well as images to store inside the missile's tracking system, Wortzel said.

``The Chinese always have had good intelligence but this handbook shows they are focusing on specific needs for their military improvement so the U.S. needs to be vigilant,'' he said.

Electronic Intelligence

China monitors signals from India, Japan, Russia, South Korea, Southeast Asia and Taiwan, the 102-page handbook says. ``Signals from U.S. military units located in the region are of particular interest to these monitoring stations. There is no indication that this capability presents a significant threat to U.S. forces.''

Chinese ships ``monitor U.S. military operations and exercises in the Asia-Pacific region,'' supplementing several dozen monitoring sites in China and listening posts in Burma, Rocky Island in the Paracel Archipelago in the South China Sea and the Coco Islands in the Andaman Sea, the handbook says.

``This gives China extensive capability to conduct sophisticated signals intelligence operations throughout Southeast Asia,'' it says.

Still, ``while it is expected that China will improve its capabilities -- increasing the collection threat to the United States -- the majority of intelligence will probably continue to come from'' spies and China's harvesting of unclassified information such as Rand Corp. reports and congressional documents, the handbook said.

Avoiding Surprises

The improvements accelerated after China's apparent surprise in March 1996 at the U.S. decision to dispatch the USS Independence aircraft carrier near Taiwan after China during a war exercise fired missiles over the island in protest of its first presidential election, the commander of the U.S. Air Forces in the Pacific said.

``When you get `surprised' as a nation you want to ask yourself whether you want to be surprised again or whether you want to develop capability to not be surprised,'' General Paul Hester, the commander of Pacific Air Forces told reporters in an April 28 breakfast meeting.

``They are developing the capability to not be surprised and to be able to see further away from their shoreline that they could in 1996.'' Hester said.

China now has only a limited ability to take spy satellite photos and uses that to collect images over Russia although U.S. intelligence agencies believe that China will ``probably develop'' a satellite camera system capable of snapping ground images of higher resolution, the handbook said. It does not say when this capability will be achieved.

Human Spies

China has the potential for a robust human spy system within the U.S.: seven diplomatic establishments and 2,750 commercial offices in addition to an estimated 100,000 current and former students from the Peoples Republic, the handbook said. In addition, 27,000 PRC delegates visit the U.S. annually, it said.

Chinese intelligence makes an active effort to recruit Chinese-Americans, although ``there is no evidence that the PRC considers Chinese-Americans to be more vulnerable to approach then any other group,'' the book said.

``Chinese human intelligence operations rely on collecting a small amount of information from a large number'' of ethnic Chinese, it said. ``The PRC attempts to recruit or at least `make friends' with as many Chinese-Americans as possible, apparently hoping that at least some will perceive an obligation to help China, perhaps on a confidential basis.''

Potential to `Overwhelm'

This strategy, while not ``particularly efficient,'' has the potential to ``overwhelm U.S. law enforcement and counter- intelligence because of the sheer quantity of operations they undertake,'' the book says.

Wortzel said the depiction of China's human spying tactics is ``realistic.''

``The characterizations of the use of ethnic Chinese- Americans in espionage is realistic and has no -- repeat, no -- tinge of racism,'' he said.

China also has dispatched agents to the U.S. who have no immediate mission except ``to become long-term sleepers.''

``They believe if large numbers of PRC nationals leave China and settle permanently in the U.S., some of them may some day find their way into positions of intelligence potential,'' the books says.

The handbook is the latest edition of a publication first released in 1995. It's produced by the Pentagon's Greenbelt, Maryland-based Operational Security Support Staff.

``The material makes it the most authoritative unclassified U.S. government publication on foreign intelligence operations directed against U.S. government and commercial institutions,'' Richelson said.

``Basically it is a pretty good document that can be used by government security officers to sensitize government employees to Chinese espionage through defensive security education and counterintelligence programs without being alarmist,'' Wortzel said.

Plainly marked IF you know what to look for. A 'COR' or 'U' or 'K' or countless others mean NOTHING if you don't already know. That isn't very nice.

> There are over 300 kosher certifying organizations in the US, so the
> fees charged for the inspection and certification are kept low.

I've read that it may be over 15 BILLION dollars a year raised for Jewish religious associations. That is up considerably from the few million raised in the late fifties.

> The fees pay for the service, not for a religion.

The fees pay for a religious service and tradition.

> Koshering inspectors may
> not be the most interesting personalities but I doubt they include more

The YB400 and Sat800 Grundigs are very fine radios. I have one of each. For bedside radio useage, the 400 would do nicely. The sync detector is a useful feature to have. The 800 works wonderfully, but the price makes you have to really want it. The 400's lack of sync, and the 800's price and size, would probably steer you towards the Sony 7600, of which I have no hands-on experience.

There are a few other clandestine Hifer beacons that are hidden in the Southwest desert and running on solar power. Check 2097.45 kHz. An "A" is sent every 9 seconds. Also check 4079.65 kHz. The CW beacon sends "TMP" and then the temperature in Morse. Supposedly located in the western AZ desert. There is also a cluster of "beepers" and "ditters" between 4095 and 4096 kHz located somewhere in the California Mojave Desert. All these beacons are around 100 mW and solar powered.

I want to take this time to thank all of you who provided me with good and sincere feedback on the different radios. I might lean toward a 7600GR simply for cost. I currently have the Grundig YB-400PE but would really like sync detection. If anyone wants to possibly trade radios or some such, please write to me off of the group.

I am not going to post or read further on this news group, at least for a while, because of the way things seem to deteriorate in terms of conversation. I don't know exactly why it has to turn into the ridiculous thread it did but I need no part of it. I simply wanted honest answers and thoughts.

I personally know too many cops (including few in my own
family) to give any credence to what you think goes on in the real
world.

Let's start with the time I heard, in a municpal courthouse
cafeteria, a bunch of deputies at a nearby table yukking it up about a
fellow "officer of the law." He was said to be "just a little too
macho" because he beat the shit out of a nun he had in custody. Yet,
had he been dropped, as he so righteously should have been, he'd have
been lauded as "one of our own" and "a fallen hero". Barf!

1285. Two Radios with AM-SYNC for Nightime "BedSide" Listening

Newsgroup: rec.radio.shortwave
Date: 2005-05-12 03:11:18 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1115867478.059191.141090@z14g2000cwz.googlegroups.com>
Source record: 21820

KN,
.
If you were talking about a Walk-Around-the-House Radio with
AM-SYNC then I would simply say get the Sony ICF-SW7600GR.
* Sony ICF-SW7600GR - Two In-Door Antennas for AM/MW
and FM Radio Bands
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2936
.
For a "Bed-Side" Radio with AM-SYNC :
.
If you do not want to send the money on the Grundig Satellit
800 M then get the Sony ICF-SW7600GR and add a pair of
self-powered External Speakers to improve the Audio Quality
of the Radio's small speaker.
+ Add the Sony AN-LP1 Active Shortwave Loop Antenna for
Shortwave Listening.
+ Add a Lazy Susan with a Select-A-Tenna for AM/MW Broadcast
Band Listening.
* Sony ICF-SW7600GR Radio and the Sony AN-LP1 {SW} Antenna
and the Select-A-Tenna {AM/MW} Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2588
* Shortwave Listener (SWL) Antenna 'options' for a
Sony ICF-SW7600GR Radio
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2892
.
If you want a Radio with the Big Box "Full" Sound then get
the Grundig Satellit 800 M.
+ The Grundig Satellit 800 M has the added advantage of it's
Mega Size Whip Antenna and the built-in Pre-Amplifier for
the Whip Antenna and AM/MW Ferrite Rod Antenna.
* Some Thoughts on Antennas and the Grundig Satellit 800 M
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/880
Note - Add a Select-A-Tenna on top of the Grundig Satellit 800 M
above the Speaker (Left-Side) can really improve AM/MW DXing.
* Improving the Grundig Satellit 800 M's AM/MW Reception for DXing
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/865

.
READ - Sony ICF-SW7600GR 'portable' -=V=- Grundig Satellit
800-M "Desk Top"
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2502
.
.
iane ~ RHF

.
All are WELCOME and "Invited to Join" the
Shortwave Listener (SWL) Antenna eGroup on YAHOO !
<http://groups.yahoo.com/group/Shortwave-SWL-Antenna/>
.
Some Say: On A Clear Day You Can See Forever.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/502
.
I BELIEVE: On A Clear Night . . .
You Can Hear Forever and Beyond, The BEYOND !
With a Shortwave Listener SWL Antenna of your own making.
"If You Build It {SWL Antenna} You Will Hear Them !"

AIR Bangalore outlets on 9425 and 10330 in the mornings get my vote. The reception is often wonderful, especially on 9425, and the sub-cont. music and Bollywood sounds are great listening.

Well it certainly makes sense to piss away a few hundred
million on an infrastructure to pre-shrink license applicants than to
put a lot less into training, equipping and deploying enforcement
people with authority to pull licences and apply meaningful fines.

Some radios already output the signal after the IF. This is what feeds a Sherwood synch demo:
http://www.sherweng.com/indepth.html
I'm not saying I'ev done this myself at 455Khz, but I know the theory and have done phase lock decimation demodulation in voice band data modems.

In this particular application, all the multiband tuning has been done by the radio. All you are doing is the final demod. I'm not sure I can explain it better than that.

The oversampled decimation demodulation sounds more complicated than it is provided you understand a bit of digital signal processing. If you know about the concept of aliasing, then what you are doing to demod the 455KHz signal is to alias it back to baseband. Let's say I sampled the 455Khz signal at 4*455Khz. Now I have this stream of samples. Label the stream 1 2 3 4 1 2 3 4 etc. where the numbers correspond to the sample clock phase, which is 4 times the 455Khz signal. Now make two stream of data such that they are 1 -3 1 -3 1 -3 etc and 2 -4 2 -4 2 -4 etc. This effectively beats the signal down to baseband and at the same time derives the signal in quadrature. WIth the quadrature signal, you can isolate the sidebands.

The phase lock loop is used to generate the oversampled clock. A PLL basicly does what the name says, i.e. locks its oscillator to the reference oscillator. To get the 4x oversampled signal, you insert a divide by 4 after the oscillator. Now the oscillator will run 4x faster to lock to the reference.

Probably the only reason this hasn't been done is there are numerous patent "mine fields" on this scheme. I found this paper on decimation demodulation:
http://www.ntnu.no/~htorp/Undervisning/TTK10/IQdemodulation.pdf
Section 3.5 explains the procedure. A similar scheme is used in digital demodulation of the chroma signal in color TV, except they phase lock to a multiple of the color burst.

Then take a careful look for the markings and don't buy it if you
don't want it.

I worked for a Jewish family years ago and I had no problems with
them, or their food requirements. They found it strange that I prayed
before eating any meal, but it didn't bother them any more than their
requirement for kosher foods. To each his own. From what I've heard
about sloppy USDA food inspections the kosher food sounds like its
processed under tighter standards. Do you know the allowed percentage
of rat feces in some USDA approved foods? There are other things the
USDA standards allow that would make you sick if you studied them.

If you mean the variable voltage power supply plug-in thing, I
have no idea how it works. You might find outat the mfr's site.

If you mean the thing, I plug it into, one is a compact RS
thing called PowerUp Automotive Jump Starter. About 8"W x 6"D x 9"H.

It has only a couple of battery clamps and a lighter socked.
Recharges with a regular extension cord (not included. Something like
$30 or $40 at RS.

The larger one is called a 3 in 1 Power Station. Wider and
higher, has battery cables, lighter socket, hinky flashlight lens and
an air compressor, which so far is kind of a joke the two times I
played with it. About $60 at Costco, but I got it for nothing for
getting four tires together.

Frankly I like the smaller one because it's a lot lighter and
more convenient to drop on the floor of the truck without taking up
too much space. It will easily power anything anything I throw at it
for at least a day. Both have sealed batteries inside, so I expect the
power to be cleaner than the car socket.

Thanks for the information. I think I was listening to him on the Ann
Arbor Mi. Station from 7 PM - 10 Pm so It looks like they've changed
his broadcast hours. I'll be sure and check it out.

Thnaks again !

Gary

If this little stuff bothers you it's better that you go home to bed. There was actually good SW answers intermingled with the really good insults and such!

I watch the group for only the trash talk so could everyone please cut down on the SW talk! No wonder culhulin left as there was not enough trash talk to keep him interested!

BTW, if you use a sync dectector.....

Only Clinton and Bush? Hell, I thought having a BS degree was a prerequisite for every politician.

And you're right, a Republican politician is simply an inverted Democrat.

>

You are right -- there is nothing credible about the Sat 800, unless cheap plastic, knobs that fall off, more birdies than signals, and faux rack handles are the hight of credibility to you.

You really, really need to try other radios. If you can't tune an R7 or an R75, you probably shouldn't be allowed outdoors without a keeper.

You want credible, and low cost? Try the Ten-Tec RX320D or the WinRadio G303i. You want credible and simple? Look for a used Lowe HF-150, although low-cost won't enter into it there because there's such a high demand for them.

More credible receivers? Try a Sony 2010, a FRG-100, R7x or R8x, R75, R8500, almost anything from Ten-Tec (except the regen kits, but those are for fun, not performance), most Lowe's, the AOR 7030 (although, if you can't figure out how to tune an R7, I doubt you could figure out how to adjust the volume of a 7030), dozens of boatanchors (I'm partial to Collins, myself), etc.

The sat 800 is the radio equivalent of a $45,000 yugo.

Disclaimer: I owned or currenly own one or more of the following: FRG-7, FRG-100, R75, R8500, Ten-Tec RX340, WinRadio G303i, Collins R392, Lowe HF-150. I've had the pleasure (or misfortune) of working with one or more R9000, Sat 800, R8, R8B plus specialized receivers from Agilent/HP and Anritsu.

You, sir, need to get a clue.

while scanning MW yesterday i found the travel info station for LAX.
WNAC296@530khz.
a super catch as i was moble in Camarllo, Ca
some 60 miles due north.
can anybody tell me what the radius of this station?

12095 has been one of my favourite BBC frequencies for years and the only consistent QRM I've noticed is some RTTY on the Upper Sideband.

It's clear and strong right now - 1900UTC

@4ax.com:

Unfortunately David, most Americans are incredibly indifferent to the
term and beliefs behind the Neo-Conservative movement. They have been
duped, proudly carrying their Chinese made flags, espousing Patriotism,
and they believe all that the see and hear from the mainstream media.

Pursuant to the principle of the government terrorizing the population,
the other day in Washington with the plane flying in a no-fly zone would
be a great example. Just like the One-A-Day Vitamin, we seem to need to
receive our weekly threat of terrorism to keep us on our toes.

Thanks for the post, I saw the reference to the Power of Nightmares on
Drudge, but I never read the story, since I didn't know that they were
referring to a movie title. I look forward to seeing the film.

Regards,

Dr. Artaud

This idea may have started as an April fool joke.....
But, the idea does have some merit.

Perhaps further discussion refining this concept, leading to a request to
the FCC for an NPRM is in order here.

There's a huge difference between acknowledging a situation with
potential for danger and living in constant fear and making stupid
decisions because you're afraid.

The best way to honor the victims of terrorism is to move civilization
into a new era where such behavior is unthinkable. This means
humble-pie all around the room.

In the meantime, don't think for a minute that George Bush can protect
you. Even if he tried he couldn't.

1333. Jesus said, "I am the way, the truth and the life: no one can come to the Father(God)(in Heaven), but by me." (John 14:6) This means that if you die without trusting in Jesus Christ as your Lord and Saviour you will die in your sins and be forever separated from the love of God in a place called Hell. The Holy Bible descibes Hell as a place of eternal torment, suffering, pain and agony for all those who have rejected Jesus Christ. The good news is that you can be sure you are going to Heaven when this life is over if you allow Jesus Christ to save you today. Do not wait until later to be saved because you do not know exactly when you will die. [Posted by: RonaldGrossi3861@yahoo.com on May 14, 2005] [6:11:19 pm]

(John 14:6) This means that if you die without trusting in Jesus Christ as your Lord and Saviour you will die in your sins and be forever separated from the love of God in a place called Hell. The Holy Bible descibes Hell as a place of eternal torment, suffering, pain and agony for all those who have rejected Jesus Christ. The good news is that you can be sure you are going to Heaven when this life is over if you allow Jesus Christ to save you today. Do not wait until later to be saved because you do not know exactly when you will die. [Posted by: RonaldGrossi3861@yahoo.com on May 14, 2005] [6:11:19 pm]

I believe that the Grundig radio is a Tecsun Green 88. I wonder if this
Bell and Howell radio isn't also a Tecsun, or a smaller Chinese maker
ripping off Tecsun (considering how there's virtually no patent
protection in China).

I wonder how much of the Mexican economy runs on illegals sending their meager American paychecks home to their families. Judging from Fox's reaction, it's a LOT. You'd think that the Mexicans would be more interested in developing their own educational system (the average Mexican has a fourth grade education, I think) so that Mexicans would be able to create jobs within Mexico that would pay well and create a

stable middle class that in turn could support an advanced economy instead of basing the whole country's existence on mooching off the rich gringos. A country that has its whole economy and society based on fleecing the rich is a giant welfare state, and is therefore inherently unstable (as well as doomed to poverty and mediocrity). If the US economy ever falters badly, something that is a distinct possibility within the next 30 years, Mexico will be brought to the verge of chaos, like Argentina was five years ago when the rich stopped investing there. Argentina learned the hard way that basing your economy on welfare handed out by the rich is a bad idea. Mexico is headed down that same road.

Hi Eric,

I will still be working as a contractor to finish it up. Nobody over there knows too much about receiver design, and they realize that they need my help. They are nice folks, so I won't abandon the project. I did tell them that I want one of them for myself.....it is always good to have a design example when interviewing for jobs.

Pete

I will have new products in the future. Now that I am away from the full-time design thing, I can be creative on my days off from the new job.

Not yet. They are still working out the front panel design. It will probably be some sort of stick-on overlay like the Palstar R30. The owner of the company is a very good front panel designer, so it should look pretty cool. I was trying to get them to use those LCD shutter arrays that are combined with membrane switches. Really cool looking, with different colors. It reminds me of the LCD dashboards that you see in some of the higher end autos.
Once the first article of the product is completed, I will make sure that they post it up on their website.

Definitely. I think that we will have it set up for a user selectable offset; this way, it can work for the R4 / TX4 combination and the SPR4. Some fellow in Italy came up with a really cool looking version of what I have designed. I also wanted to do a version for the Collins S-Line, but I have another friend that wants to do that.

12095 has had the RTTY interference on one sideband for as long as I can remember. Anyone know the source of this QRM? It can easily be removed with a selectable sideband sync' detector receiver like the R8B and others.

Actually, before Mexico gained independence from Spain, most Mexicans were de facto slaves on big plantations called haciendas. The haciendas were owned by ethnically pure Spaniards who forced people who were mixed Spanish and Indian-90% of the population of Mexico-to work for them, much like blacks were forced to work for white masters. Like in the Old South, there was a lot of owners raping their slaves and then forcing the "impure" children into slavery.

After the first Mexican Revolution, the system was broken up and the "Mestizos" freed. But to this day the economy of Mexico is controlled by the descendants of the pure Spanish hacienda owners, who have kept themselves distinct from the mestizo population through selective breeding, and who keep the mixed people from gaining any ground in the economy. It's as if the descendants of the first wealthy Americans (from the Mayflower era) still controlled the economy of the US and denied the rest of us any opportunity to get ahead or better ourselves. In that case, we'd probably want to go to a freer country too. And the Spaniards who control Mexico want as many of the mestizos to flee to America as possible so they aren't around to cause trouble, and so that the Spaniards can get fat off American largesse.

As bad as it is for the US having millions of uneducated immigrants around who won't even learn the language of their host country and who send all their pay back home, upending the Mexican economic order would cause even worse trouble for both countries. Mexicans are against birth control since they're Catholic, which means that Mexico is a powder keg of millions of people who have no hope, and the keg keeps growing in size. The economic elite try to defuse it by siphoning off the excess people to the US, but that will eventually fail, and the keg will explode. Imagine having Argentina on your back doorstep, or even worse one of those African countries that's fighting a perpetual civil war.

Did you say 30 years? I'd say about 30 months. United airlines can't
provide a pension for their workers, General Motors is nearly broke and Ford
isn't much better. The jobs we are creating are mainly service type jobs
that go mainly to Mexicans. I think the house of cards is going to fall
soon unless we have some drastic things happen. RJT.

We need to get Oilman Bush and Oilman Cheney out of office so that our economy and society isn't dependent on TWO refineries in Saudi Arabia. I'm sure that that situation makes Bush and Cheney very rich. But if those refineries were to be destroyed, everything would come tumbling down. We need energy sources that aren't dependent on a bunch of Arabs who hate our guts and want to destroy our civilization out of spite that Allah didn't give THEM all our goodies. Solar for electricity, grain alcohol for powering transport (the Brazilians already do this), bioengineering plants to produce plastic. All would be feasible if Big Oil, headed by the occupants of the White House, didn't chain us to a diminishing resource in order to make themselves fabulously wealthy. I don't know what they expect to do once the oil runs out. They'll sink along with the rest of us.

Congratulations. I've been clean for ten or fifteen years now. Stopping was really hard. Anytime you get the craving, do ten QUICK pushups, then sit down and think about it. That may be inappropriate behaviour outside the home, however.

I had to stop the beer intake too. After a couple, the cigarette would appear like magic. If we were getting a good buzz on, the plain end Camels or small cigars, like Colt 45s, came out.

It's a cross addiction, for lack of a better phrase. I missed the first smoke of the day, with coffee, but after a few months, the cravings started to fade. The thought of smoking now makes me cringe.

In Oakland, CA a "Sanctuary City".
.
There are Signs posted on the Telephone and Street Light Poles in areas
where Illegal {Mexican} Day Laborers Loiter all day long that state :
The Fine for Stopping and Soliciting {Mexican} Day Labors is $1000.
The Oakland Police Department (OPD) will 'occasionally' Stop and issue
a Ticket $$$$ to a US Citizen for this Illegal {Criminal} Act. But the
Illegal {Mexican} Day Labors are NOT Stopped from standing around those
Corners all day long and when the OPD dose stop the US Citizen for
offering the Day Labors work the Mexican is NOT issued a Ticket.
.
The {Mexican} Day Laborers are a "Protected Class" and the US Citizens
are Treated like Criminals.

now what is wrong with this picture ? ~ RHF
.

I have both shortwave radios with manuals for sale
both work well and have ac adapters and manuals. The
Sony also has the AN-LP2 active antenna.

I'll throw in 2 MFJ antenna tuners
models 16010 and 956

Now the bad part you have to pickup at my residence in
Essex, Maryland as I am homebound and unable to ship.

Batteries included so you can see they are working,

Thanks for your time.
Pleasee email me direct. I can only accept cash.

The early ones are kinda scarce, in most any condition.

I still have my first one, the 1967 edition, and a friend has the 1966.

The funny thing is I got to that point and was clean almost a year and then a couple drinks one night and I was right back on em. I 've been trying to quit for three years. My Dad just died a couple years ago from cancer, age 58. So I really feel like I'm fighting for my life. I never was a heavy smoker but I sure miss em sometimes.

Significant Weakening Of Gulf Stream Detected

Posted by: Indy
On: Sun May, 8 2005 @ 08:01 GMT
Scientists have found evidence that the sinking mechanism that drives the Gulf Stream has weakened to less than 25% of its original strength. The results could mean a significant cooling for Britain and Europe.

original news source:

www.timesonline.co.uk
CLIMATE change researchers have detected the first signs of a slowdown in the Gulf Stream ï¿½ the mighty ocean current that keeps Britain and Europe from freezing.

They have found that one of the ï¿½enginesï¿½ driving the Gulf Stream ï¿½ the sinking of supercooled water in the Greenland Sea ï¿½ has weakened to less than a quarter of its former strength.

The weakening, apparently caused by global warming, could herald big changes in the current over the next few years or decades. Paradoxically, it could lead to Britain and northwestern and Europe undergoing a sharp drop in temperatures.

Please visit the link provided for the complete story.

This discovery is absolutely incredible. I do believe they have greatly understated the effects of a current failure. That part is subject to debate. In my opinion the most concerning quote from the story was "Until recently we would find giant ï¿½chimneysï¿½ in the sea where columns of cold, dense water were sinking from the surface to the seabed 3,000 metres below, but now they have almost disappeared."

If and when the current fails the effects will quickly wrap around the globe. If anything global warming may amplify the effects by greating greater temperature differences from north to south and provide the instability necessary to create huge storms by creating a greater verticle temperature difference.

Business Group Criticizes Bills Targeting Illegal Immigrants, Employers

By Phil Riske

So far, Senate Republicans have avoided roll call votes on penalties
for employers who hire illegal immigrants.

Rather than facing roll call votes on 16 amendments to bills dealing
with denial of public services to those who cross the border illegally
and work centers that employ illegal border crossers, the majority
chose to adopt the amendments in a preliminary voice vote May 3 to
approve S2030 and H2592.

Sen. Bill Brotherton, D-14, who authored amendments calling for
sanctions of companies found guilty under federal law (there is no such
state law) of knowingly hiring undocumented workers, said his
amendments were adopted because Republicans don't want to be on the
record on the issue and plan to strip his amendments from the bills in
conference committees.

"They didn't want to be on the record of voting to sanction
businesses because some of their chamber [of commerce] buds would be

angered about that . . ." Mr. Brotherton said. "My understanding is they're going to go to conference and put on some bullet proof Republicans who would be willing to strip out the sanctions on employers and then push the bills through."

Farrell Quinlan, vice president for communications and federal affairs at the Arizona Chamber of Commerce, told one reporter at the Capitol that the bills and amendments are "bad policy," and Arizona industries such as agriculture and construction are dependent on foreign labor.

How many companies employ illegal immigrants is unclear, but Sen. Jack Harper, R-4, quipped in a floor speech that only 16 companies hire illegals, "and 13 of them are Filiberto's" (a locally owned Mexican fast food chain).

S2030 And H2592

Final Senate action on the two bills had not been scheduled as of press time.

S2030 denies adult education classes, in-state tuition and financial assistance for education and childcare. H2592 prevents a municipal or county government from building or maintaining a work center that, in any way, knowingly facilitates the employment of an illegal alien.

Mr. Brotherton submitted eight identical amendments to each bill that call for a series of employer sanctions, including revocation of state licenses for more than one offense, disqualification from bidding on state jobs, denial of state tax credits and civil fines.

On April 18, Mr. Brotherton was successful in getting a role call vote on one of his amendments in Committee of the Whole. The amendment passed, but Republicans then questioned whether the amendments were germane, then voted to hold the bills. Mr. Brotherton later rewrote the amendments, and the Rules Committee attorney declared them germane.

"Unless we're going to be hypocrites and basically pass legislation that makes it look like we're just picking on a bunch of poor immigrants, we've got to put in the sanctions against businesses too," Mr. Brotherton said, adding that surveys show that 75 per cent of those polled favor sanctions against employers who hire illegal border crossers. -

They are the 9-11 victims' relatives. Try to pay attention.

1400. Re: Jesus said, "I am the way, the truth and the life: no one can come to the Father(God)(in Heaven), but by me." (John 14:6) This means that if you die without trusting in Jesus Christ as your Lord and Saviour you will die in your sins and be forever separated from the love of God in a place called Hell. The Holy Bible descibes Hell as a place of eternal torment, suffering, pain and agony for all those who have rejected Jesus Christ. The good news is that you can be sure you are going to Heaven when this life is over if you allow Jesus Christ to save you today. Do not wait until later to be saved because you do not know exactly when you will die. [Posted by: RonaldGrossi3861@yahoo.com on May 14, 2005] [6:11:19 pm]

When did you first start hating the environment, Bozo? It would appear that any sane individual would care enough to try, in some way, to protect the planet we live on. It's the only planet we have. The problem being is that an inconsiderate boob, such as yourself, can undo the work of thousands with their stupidity.

You may now resume dumping your used crankase oil into the storm sewer.

My mom died of cancer of the esophagus about five years back. It was horrible. She smoked for years and quit just after the diagnosis. Needless to say, things were too far along for the quiting to help. Smoking has to be stupidest habit ever adopted by humanity.

So, was it good for you?

The Wall Street Journal - which no one who is rational can
accuse of being liberal - came up with a different slant
on this story. Apparently the Border Patrol is under pressure
from the rich and powerful agricultural interests in Arizona
not to interfere with the inflow of migrant workers until
AFTER lettuce picking season is over. Because not having
a sufficient supply of cheap labor costs Big Business money...

From: Burr <pitz2@verizon.net>
Message-ID: <mTIhe.7817$Y12.6559@trnddc09>
Source record: 22047

BILL CLINTON STATUE COMMITTEE

Little Rock Arkansas

Dear Friend and Fellow Voter:

We have the distinguished honor of being on the committee for raising five million dollars for the purpose of placing a statue of Bill Clinton in the Hall of Fame in Washington, D.C.

This committee was in a quandary as to where to place the statue. It was decided it would not be wise to place it beside the statue of George Washington, who never told a lie, nor beside the statue of Jessie Jackson, who never told the truth, because Bill Clinton could never tell the difference. We finally decided to place it beside the statue of Christopher Columbus, the greatest Democrat of all time. He left home not knowing where he was going, and upon arriving at a destination, had no idea where he was. When he got home, he did not know where he had been and he did it all on someone else's money.

Over five thousand years ago, Moses said to the children of Israel. "Pick up your shovels, mount your asses, load your camels, and I will lead you to the promise land". Almost five thousand years later, Roosevelt said, "Lay down your shovels, sit on your asses, light up a camel, this is the promise land" Bill Clinton stole your shovels, kicked your asses, raised the price of camels, and mortgaged the promise land.

If you are one of the fortunate people who have anything left after paying your taxes, we expect a generous donation from you for this worthwhile project.

Fraternally,

John Paul Jones

Chairman, Bill Clinton Statue Committee

Advisor to Former Gen. Secretary of the Chinese Communist Party

"The CCP purchased all kinds of media. It purchased not only Taiwan's media, but also the international media. For example, CNN is pro-CCP. Its reports sound objective superficially, in reality it reports only those stories that do not embarrassed the CCP."
...
"China is just like a leukemia patient. His blood is completely rotten. He looks healthy because he receives more blood transfusions than he needs. Western free countries invest more than US$ 60 billion annually and transfer advanced technologies to China. These enable the Communist government to exploit Chinese laborers with low wages to create profit. The laborers receive only a tiny share of the profit. Small portions of it go to multi-national companies, Taiwan's businessmen, and American businessmen. The Chinese government takes the lion share to expand its police force to control the people. Therefore the CCP is relying on international support for its sustenance."

[Mr. Ruan Ming is a member of Hu Yaopang's think tank, the former General Secretary of the CCP. He participated in drafting the documents for the Eleventh Communist Party Congress Third Conference, the most important conference during the reforming period of Ten Xiaoping's reign. He has served as director of the Theoretical Department of Beijing Daily, a member of the Academic Committee and as deputy director of the Theoretical Section of the CCP's Central Party School. Since 1988 he has visited and conducted research in several top US universities such as Yale and Princeton, and in Taiwan's Danjian University. He has also served as a visiting professor in the China Research Institute of the Danjian University since 1997. He is currently an advisor in the Section of Strategy and International Research, Taiwan Integrated Research Institute.]

1430. Desktop metal shielded PC case?

Newsgroup: rec.radio.shortwave
Date: 2005-05-15 18:00:57 UTC
From: shoppa@trailing-edge.com
Message-ID: <1116180057.598783.160160@g14g2000cwa.googlegroups.com>
Source record: 21964
Cross-posted to: comp.sys.ibm.pc.hardware.misc,rec.radio.amateur.homebrew,rec.radio.shortwave

I'm looking for a solid desktop (either pizza-box or mini-tower)
computer case that has an all-metal exterior for shielding RFI. This
is for use around radios etc. I realize that SVGA monitors, mice, and
keyboard leak too, but right now I'm looking mainly at the PC box.

Most of the cheaper cases come pretty close to good shielding, but they
have these plastic filler panels in the drive bays that offer no
shielding and let a lot of RF leak out.

Most of the fancier cases in the computer stores around here have
humongous plastic pieces on the side. I'm looking for all-metal.

Rack-mount server cases seem to be pretty good in terms of metal
shielding all around but I need something for desktop use.

Any suggestions? If all else fails I can just put some perforated
metal over the holes in a cheap case, but I'd rather just buy a good
case to begin with.

Tim.

They make 'em:
http://www.directron.com/pc75.html

I have even seen an all stainless steel case which is used around food production plants... can't find anything close with google though...

Son has an all aluminum case, $175.00 is what he paid for it!--OUCH!!!!

Warmest regards,
John

You could always shield the plastic panels with copper or aluminum foil or screen--etc... (on the inside--out of sight)

Warmest regards,
John

Umm... the only thing you can reliably count on with global warming is that whatever climate you are used to isn't going to be there.

The only people left who deny global warming is a problem are idiots who get their scientific advice from Rush Limbaugh and his equivalents.

This is a shortwave group. If you actually listen you should be relatively current on news. Did you know that Sweden spent a freaking fortune trying to save a glacier by *wrapping part of it in a huge blanket????* Climatologists kinda snickered and said, good luck.

Even an asshole moron like Prickets is right occasionally, though not through any consious effort of his own.

...year 9 of a drought here... nothing to see, move along now...

OBTW: Google "atlantic conveyor" to figure out what's going on. If you are *very* fortunate, you won't live to see the result of your stupidity.

Climate change has been going on for eons... it's been colder, and its been warmer, many times. This just happens to be another period where its getting warmer.

Go back 30 years or so and everyone was screaming that it's getting colder.

Go figure.

Get over it, there's nothing you or I can do about it.

Continue to tote.

What about that gaping big square-foot hole in the side?

> I have even seen an all stainless steel case which is used around
> food

The old "PC Power and Cooling" all-metal-tower used to be good (I think it was available in chrome!), but they don't sell them anymore (probably because they cost several hundred $).

I'm not looking for anything particularly stylish. Just a case without big holes covered by plastic.

Tim.

Notice how this 'tard characterizes it as 'your' stupidity...

Boggling.

'Tards are amazing creatures who shouldn't be allowed to use computers. After all, they are using up natural resources to power them... thereby polluting the atmosphere causing either global warming or cooling.

The horror of it all!

True. But then again eons ago didn't have billions of people and highly
complex civilizations. Dramatic changes in the climat can lead to droughts
and floods and eventually famine and plague that would destroy people and

economies.

Personally, I'd place a sheet of aluminum window screen between the acrylic sheet and the case--that way I could still get the effect of looking into the case, and still be shielded...

Other than that, I'd pick the one from their catalog which DOESN'T have the "big gaping hole" in the side... <grin>

Warmest regards,
John

Take a look at these barebones systems:

<http://www.tigerdirect.com/applications/category/category_slc.asp?MfrId=1106&CatId=31>

If the link doesn't work click on "Barebones", then select "Shuttle"
from the brands menu.

My 3.3Ghz seems to broadcast on most frequencies--from rfi in the am radio, fm radio, sw bands, etc... toroid chokes on the phone/modem/net card cables helps a lot...

Warmest regards,
John

Rush? Hell, I don't think he denies that it is warming up, however I do believe he states that it is not necessarily caused by man. Try to be at least a little factually correct.

Darn right! That satellite stuff is for 'tard boys who couldn't figure out how to put up an antenna or tune a shortwave receiver if their sorry lives depended upon it.

Long live shortwave and shortwave DX'ing.

What he said. Usually on all harmonics of each clock in the box, from ~1.8 MHz on up to near daylight -- or at least well past 70 cm., in the case of the boxes here at home and at work. Add in all their cross-modulation products as well, and it starts to look pretty gross. One of these days I'll borrow a spectrum analyzer and see what's coming from where. I know that the bedroom TV puts out a lot of stuff around 3.5-4.0 MHz. and the cable box is pretty noisy, too. Hard to hear DX over all the in-house QRM.

Take a closer look at some of the higher quality cases.

All the cases I have purchased within the past few years have plastic, as you say, over the drive bays, but there is metal behind that plastic. If you want to use the bay you need to pop out the metal. Except for floppies, the drives generally have metal behind their plastic faces, too.

More important is the scheme for attaching the sides. Those little drive holes will let some RF out, but long, narrow gaps in the side let out a lot more. Most recent cases seem to have fairly elaborate schemes to be sure that the sides don't leak.

I can't believe many of the mass marketed cases actually make it to manufacturers who need to be certified, but the lengths they go to ensuring RF shielding lately would indicate to me they are getting pressure from somewhere.

As best I can tell, the case isn't nearly the problem the wires are, but even there, it seems like the newer stuff is pretty well behaved. My radios are pracically surrounded by computers and no noise anymore. Used to be a real problem but as the computer equipment has gotten newer, the interference problems have faded. I can still hear my Ethernet on some bands, but I have a pretty ancient hub. Once that gets replaced I suspect the ethernet problem will disappear, too.

..

1455. Re: Jesus said, "I am the way, the truth and the life: no one cancome to the Father(God)(in Heaven), but by me." (John 14:6) This means thatif you die without trusting in Jesus Christ as your Lord and Saviour youwill die in your sins and be forever separated from the love of God in aplace called Hell. The Holy Bible descibes Hell as a place of eternal torment,suffering, pain and agony for all those who have rejected Jesus Christ. Thegood news is that you can be sure you are going to Heaven when this lifeis over if you allow Jesus Christ to save you today. I guess you'd better get off the 'puter, 'tard boy... you're using up valuable resources... contributing to global warming-cooling.

You got a car 'tard? Stop driving. (The thought of a 'tard driving is scary enough).

You eat 'tard boy? The amount of resources used to bring you your food every day is boggling. Stop eating.

Just OD on some of your meds, then you won't have to whine, complain and have a nancy boy fit each and every day.

LMFAO every day at the Rickets. (Rickets is a code word for 'tard).

Once again, the tower of intellect and repartee known as beerbarrel speaks.
Man, you just aren't funny. Even cuhulin (may he RIP) had his occasional
moments of humor; you don't even approach his low standard.

Alright, dxAce...what's your problem? I've never butted heads with you
before; where's this animosity coming from?

if it's CO2 related and we can materially reduce CO2 it's not
important if we ''caused'' it or not. Just important that we could
have TRIED to delay or reverse it and we did nothing.

1474. Re: Jesus said, "I am the way, the truth and the life: no one cancome to the Father(God)(in Heaven), but by me." (John 14:6) This means thatif you die without trusting in Jesus Christ as your Lord and Saviour youwill die in your sins and be forever separated from the love of God in aplace called Hell. The Holy Bible descibes Hell as a place of eternal torment,suffering, pain and agony for all those who have rejected Jesus Christ. Thegood news is that you can be sure you are going to Heaven when this lifeis over if you allow Jesus Christ to save you today. Do not wait until laterto be saved because you do not know exactly when you will die. [Posted by:RonaldGrossi3861@yahoo.com on May 14, 2005] [6:11:19 pm]

I specifically left the majority of the thread intact for -your- benefit,
Ace.

Don't let my efforts got to waste. The animosity is coming from -you-.

Nope... all I did was laugh (LOLOLOL) at the 'Honkus' moniker... after that,
'tard boy, it began with your 'get a room' comment.

Now, do me a favour, and go shove something very large up your fricking queer
ass and break it off, you stinking piece of know nothing shit.

Continue to tote.

Laughing at someone calling me a name is animosity. You started it bewteen
us.

And that's definitely a loss for Team dxAce; you're as uncreative as
beerbarrel, and that's pretty damned bad.

No, I was simply laughing at the 'Honkus' moniker. It tickled me funnybone. The
escalation was all yours, queer boy.

1484. A Good face for RADIO

Newsgroup: rec.radio.shortwave
Date: 2005-05-15 21:39:49 UTC
From: "AussieSeek.com" <nswamfm@yahoo.com>
Message-ID: <1116193189.152730.169270@g49g2000cwa.googlegroups.com>
Source record: 22168

Theres been some discussion on the NZ radio news group on who coined
the [phrase,,, Oh !!! Hes got a nice face for radio !!!
It all started when someone put up a link to a Wayne Mac Photo of some
of the early guys at 2WS AM..Oh look At him. He doesnt look like he
sounds.
I could never have imagined he looks like that in real life.
Well its radio... so the face behind the name,, or mike is not
tanamount
but you wouldnt expect John Laws to look like a painted Alice Cooper
would you now?...
its the brain behind the voice that makes the difference.
Not the face behind the voice.
Mind you a good face Helps. Tim Webster seems to have been blessed.
He has it both ways. A good Voice for Radio and a good face for TV.
But it matters not much to me.. I think.
It doesnt bother me that my favourite AFL player sounds like a boy
soprano
and the club is paying for voice lessons so his media voice clips can
be understood.. as long as he kicks well.
The Alternative would be to says he is mute and heres his spokesperson
It was the ABC that opened the door to ordinary Australian voices
on Radio.It must have been hell in London for the BBC to add accents
over there.
May be we owe a lot to Normine from the Parthenon Milk Bar for the
Individual Voice of Bob Hudson appearing on radio... and not many
would not like the could have been.Would have been.
Commercial Radio was slow on the uptake.
John Brennan lately was smart to add Frank Crook to overnight.. now
theres an individual voice and a brain but Frank cringes if someone
asks for his photo on air. he is a Sound Good-Look good model but his
modesty rules.
he he.
How about You?
Do you have a great face For Radio?
I like that song.. If you want to be happy for the rest of your life
get an ugly woman to be your wife.. But I dont care my fantasy will
always bethat photo of Britney on the Fridge.
The Super Radio Network thinks a face is Important. They ask for a
Photo
with Job Applications for Jock Jobs.May be the bosses wife thumbs
throuh job Applications

Id send them a photo of Tom Cruise instead in Protest.
On Turning up theyd say... But You dont anything like your photo or how

you sounded on the phone or in your audition tape.

Eh?

But settle down.Sadly. It IS a meat market out there and thanks to Tom
you got the Job.
Gotta go now. The records running out and the Panel OP is peering
throgh
the studio Glass
Oh !!! Hes got a nice face for radio !!!

I wonder if this means a revival of the Scottish ski industry,
currently in decline due to dwindling snowfalls? ;-)

FYI:

Some plastic used in cases has a "flash" coating of aluminum
(sputtered in a vacuum chamber). While the metal is extremely thin,
just a few microns, it is enough to provide RFI shielding.

Obviously not as good as solid metal for shielding, but good enough
for many uses. Check out what sort of plastic before assuming it will
not shield.

Happy trails,

Even here in Michigan (USA) we haven't had any really good snow since the 60's save for some nasty stuff in '77 and '78 or so. The ski industry has been suffering here as well.

I though, am looking forward to planting a few palm trees and perhaps an orange grove to help tide me through my years as a pensioner.

If you buy a brand name computer it meets some prety good FCC specs
for emission. IMO if you are carefull any good all-metal case will
produce an EMI-tight case.

some music?

No to be a smart ass, but I have been listening to SW for 41 years
next month and in that time it has always had more then it's share
of religion.And when the religion is missing then we had the !@@$
cold war propadanga. NK and Cuba are the last still fighting
that war.

The CBC runs vinyl cafe' every sat morning from 10:00~11:00E,
17:--~18:00Z on 13.655 and other freqs. Good mix of odd music.
Last night they (CBC) had a nice hour long music preview on 9.?
from 9:00 until after 10:30E, 2:00~3:30Z. I didn't note the exact
freq because I was windong coils for a set ofAM/MW reject fitlers.
One to pass only above ~1.8MHz and one to pass only below ~525KHz. I
have a fairly close (~2.5M, ~3km) radio station tha produces all sorts
of in band trash. I get in on all the radio I have
listened with. Easier for me to filter them then to talk to the FCC or
their rather dull "engineer". I think he works there when he isn't
picking up trash.

Terry

But the cold war stuff was (and still perhaps is) some of the funniest stuff on shortwave.

Congrats on 41 years, I think I'm at around 40 or so.

You may be interested to know that there are a small number of
palm trees in peoples' gardens on the north/west coast of Scotland
(c.58 degrees north). Though it's not exactly tropical there; in some
places the temperature rarely goes below freezing, because of the
"gulf stream". This is good enough for some types of palm, apparently.

And the same area of Scotland is also an excellent place for
DX-peditions seeking the ultimate trans-Atlantic MF catches;
localities remote from power lines and other sources of noise.

How do we keep the nasty stuff off the air waves ???

What is happening to your Local Radio> ?

The same thing
thats happening
worldwide.

Saying Ah so wouldnt bother me
but not so in the UK ?

Do you get thrown off the radio in the USA
if you call someone a nigger?

keith

Hi,

Today I was shocked to hear racism from a BBC radio presenter. It was Radio 1's Chart Show with JK and Joel at between 16:45 and 16:50 on Sunday 15th May 2005. There was a mention of something Chinese, and one of the presenters said "Ah-So" in a mocking way. I have already put in a complaint, and the least the BBC should do is retraining.

In the UK you can hear it from the http://www.bbc.co.uk/radio1/ch?art/index.shtml. (Start listening in from 45 minutes into the show.)

I used the stand alone Real player to really make sure.

Dave.

Ridiculous. Looks like the winning bidder lives in France. Doesn't seem to be a deadbeat, but I bet they made a mistake or something and will try to get out of this one. If they're really serious I've got a 1948 ARRL handbook I'd sell for that amount and it's quite a bit thicker, so what a deal! I'd only be making a modest $753 profit on the sale... ;-)

Wouldn't that provide a better coverage with less fading compared to traditional approach? Or is it that shortwave needs ionosphere to work at all? Thanks.

Seems to me that the signal would have a pretty difficult time penetrating the ionosphere at HF frequencies.There are of course complications to that answer, such as MUF and incident angle, but in general if the ionosphere acts to reflect earth originated signals, it will do the same to space originated signals.

When you transmit a shortwave signal from an earth-bound transmitter, it gets "bounced" off the ionosphere to come back down to the listener a few thousand miles away.

If you were to transmit such a signal from space, it would bounce in pretty much the same way -- except that instead of bouncing down to a listener on Earth, it would bounce back out into space. Not particularly useful.

1502. Newsweek report on Quran desecration inaccurate

Newsgroup: rec.radio.shortwave
Date: 2005-05-16 02:21:27 UTC
From: running dogg <run@ning.dog>
Message-ID: <4288047e$1_2@spool9-west.superfeed.net>
Source record: 22187

I'm sure many people here have been following the riots in the Muslim world that occurred when the US newsmagazine Newsweek reported that American interrogators at Gitmo had flushed a Quran down a toilet in order to "rattle" the prisoners. Turns out that the "Pentagon confirmed" report was untrue. Their source was wrong. All a spokesman for Newsweek could say was the equivalent of "oops". "Words have consequences", he told the American TV network ABC. 16 people have died in the riots and Muslim clerics are now calling for a holy war against modern civilization. The problem is, Bush really believes that it IS a holy war, Christianity vs Islam, may the best God win. I believe that that conviction is behind the West's repeated offending of the Muslim world, from Abu Ghraib and other abuses at US prisons (which are much, much greater and more serious than US media has reported) to sexual harassment of Muslim men at Gitmo to this. Bush needs to pull his drunken, cocaine snorting head out of his ass and realize that if he fails, we ALL die. I'm willing to commit ritual suicide, but most Americans, and certainly most Europeans, aren't willing to die as martyrs to fundie Christianity. Bush has said that he doesn't care about the verdict of history and future generations on his actions because "we'll all be dead". If he doesn't straighten up and fly right, those words will be horrifically accurate. Are YOU willing to have your head cut off by Muslim fundies? I am.

"AussieSeek.com Political Messageboards" <nswamfm@yahoo.com> wrote in
news:1116200319.557818.154560@g14g2000cwa.googlegroups.com:

Freedom of Speech versus the hate speech laws.

If we allow ourselves to get too neurotic about speech, we soon won't be able to talk at all. Everyone can find something objectionable. Fat or skinny people, people with bad teeth, blondes, short or tall people, freckled, pale, or dark skinned people, bald people, hairy people (I have a co-worker that actually had his wife shave his back so that she could see what he looked like without all the hair), old people, young people, Christians, Muslims, Jews, men, women, gays, straights, country or city folk, northerners or southerners, people from the east or the west in the U.S. or any area in between, Americans, Canadians, Mexicans,..... etc.

If Hal Turner could say nigger on the radio in the U.S., I would imagine that it is not illegal, especially since it is used so often in movies. It's tasteless, I'd admit, but so are many of the topics that I hear on the mainstream shows, say from Howard Stern. It is for that reason that I don't listen to Howard Stern, yet I don't campaign to have him removed from the airwaves.

Stereotyping Chinese people, they can't say the Rs in words. I used to go to a Chinese fast food restaurant in a local mall. They had bins labeled Spoons, Knives, Folks.

They stereotyped themselves, by mistake.

Hate Speech laws allow others to set the parameters for what is offensive and what isn't. This is ludicrous.

Perhaps a better method is financial pressure. When people are offended, they complain to the advertisers. If the advertisers care, they will pull their advertisements, possibly pressuring the supposedly offensive show into making changes. But if the advertiser feels confident that most of their customers won't be offended, they will not make any changes.

Speech calling for violence against others, regardless of their affiliations, should not be tolerated. To me, that would be hate speech.

People should try not to be offended so easily. Ever watch Monty Python or "The Young Ones"? This may help you to desensitize your sense of being offended.

Source record: 22190

I've had the Grundig FR200 now for some time, nice little radio although plagued by birdies (images) and a supercritical tuning rate only a surgeon could effect to tune in shortwave stations. So I'm a bit interested in the FR250...since the shortwave bands are divided now from 2 bands to several more the selectivity should be a bit better. Grundig/Eton told me the sensitivity is the same. So, if you've got one and used it how does it perform? Mind you, I've no need for a super DX machine, I'm a ham op with genuine supersensitive receivers, a 65 foot tower, and a large array of antennas. The FR250 will serve as merely a nightstand radio to twiddle with prior to sleep. But I'd like to know how others rate it within these paramaters. Thanks in advance

Begin with the premise that my father taught me when I was young. He told me to always remember than every man, every man was my superior in some way. It taught volumes about humility and respect for others. In all honesty, I still lapse into stereotyping because it pervades our society, but it isn't long before his words pop again into my conscience. He was right of course...I've played chess in parks with derelict looking homeless who kicked my ass, I've seen people play at a piano keyboard with eloquence their appearance would deny. My auto mechanic, who never made it to getting a high school diploma, is a master at keeping my complicated vehicle running. Unfortunately, nasty stuff will continue, I foresee no end to it.

The same thing
thats happening
worldwide.

Saying Ah so wouldnt bother me
but not so in the UK ?

Do you get thrown off the radio in the USA
if you call someone a nigger?

keith

Hi,

Today I was shocked to hear racism from a BBC radio presenter. It was Radio 1's Chart Show with JK and Joel at between 16:45 and 16:50 on Sunday 15th May 2005. There was a mention of something Chinese, and one of the presenters said "Ah-So" in a mocking way. I have already put in a complaint, and the least the BBC should do is retraining.

In the UK you can hear it from the http://www.bbc.co.uk/radio1/ch?art/index.shtml. (Start listening in from 45 minutes into the show.)

I used the stand alone Real player to really make sure.

Dave.

Deep down Louisiana close to New Orleans
Way back up in the woods among the evergreens
There stood a radio station made of earth and wood
Where lived a country preacher named Johnny B. Goode
Who never ever learned to read or write so well
But he could play the suckers just like a ringing a church bell

Go go
Go Johnny go
Go
Go Johnny go
Go
Go Johnny go
Go
Go Johnny go
Go
Johnny B. Goode

He used to carry his microphones in a gunny sack
Go sit beneath the tree by the railroad track
Oh, the listeners would see him sitting in the shade
Humming with the rhythm that the cash flow made
People passing by they would stop and say
Oh my that little country boy could pray

Go go
Go Johnny go
Go
Go Johnny go
Go
Go Johnny go
Go
Go Johnny go
Go
Johnny B. Goode

His mother told him "Someday you will be a rich man,
And you will be the leader of a big old church.
Many people donating from miles around
To hear you pray with music when the sun go down
Maybe someday your name will be in lights

Saying 'Please send more cash' tonight."

Go go
Go Johnny go
Go go go Johnny go
Go go go Johnny go
Go go go Johnny go
Go
Johnny B. Goode

America, what a country! -Yakov Smirnoff

I noticed that the back cover is an ad for a Hallicrafters SX-62, 540 kc
to 110 Mc, for $289.50. That was a LOT of money back then, the monthly
payment on a brand new house in LA was about $150. I wonder what $300 in
1948 would be today. Probably $3,000, making this Halli about in the
price range of a rack mount professional HF radio such as a Watkins
Johnson. What does this radio go for on ebay?

Also talking about ridiculous prices, $754 for a 1948 WRTH DOES seem a
little high. I've got a 1986 WRTH, I wonder what I could get for it?
ebay isn't a place for bargains, it's a place where mysterious
billionaires come out of the woodwork and bid up stuff to obscene
levels, like $7000 for a 1938 Zenith in terrible condition.

Monica Lewinsky has her own radio station? It must be the STUPIDEST
radio station on the air, not counting WWCR. Do they talk about blowjobs
all day?

Oh. Wait. "Radio Free MORONICA", NOT "Monica". Sorry. That's dxAce's ham
repeater, N8KDV, in Michigan. It also could be the Liberty Net. Or
Howard 93.7 FM (yes, there IS such a station in northern California-all
Howard Stern, all the time!).

Core samples from Greenland, Antarctica, etc. contain trapped samples
of the atmosphere, as well as hints to the climate during those
periods along with other information such as ash from volcanic
eruptions, and so on.

So sorry to hear you failed high-school earth science.

Nonsense (at least above the MUF). Consider QSOs made using Mode K (21
MHz uplink, 29 MHz downlink) of the RS-10/11 and RS-12/13 ham satellites.

=====
RS-12 RADIO SPORT RS-12
Catalog number: 21089
Launched: February 5, 1991

Uplink: 21.210 to 21.250 MHz CW/USB Downlink: 29.410 to 29.450 MHz
CW/USB Beacon: 29.408 MHz
Robot: 29.454 MHz
[05232004]
=====

I recall listening to a satellite launched by China that played 'The East is Red' as it came within range. Don't recall the frequency right off hand but think it was up near 20 MHz or so. Perhaps someone else remembers it.

I just looked at an ad on rec.radio.swap and a fellow has a lot of ARRL
Handbooks for sale. He's asking $25 for the 1948 edition in excellent condition.

I've my fathers 1953 edition here, not in the best shape but still serviceable.

I did a quick Google and did find that that particular satellite was launched on
April 24, 1970 and used 20.009 Mhz to broadcast 'The East is Red'.

Radio France International plays jazz. There are pop music shows on the BBC.

Does Radio Havana Cuba still play the national anthem on some tape deck that has mega wow and flutter? That might pass for music.

>be the least bit concerned about RFID?
>
>-=jd=-

For the same reason you should be concerned about all the rest
of the information "collected" about you -- it's mostly bullshit and
will be interpreted by people who do not have your best interests at
heart.

Example -- my ex's info was compromized in the recent
Lexis-Nexis fuckup. They sent her a letter explaining what she should
do. It arrived in my mailbox. She has not lived here in thirteen
years.

We're still good friends, so I let her know right away.

She has lived at five addresses since we separated. I have not
changed my address for thirty-five years. When I went to a couple of
sites and looked myself up, I was listed in various databases at all
five of the addresses she's been at. So if I look for a job and tell
the prospective employer I've lived here for 35 years, and the
employer spends fifteen minutes in the palces I looked (all very
common), how is that going to affect my chances of getting the job? Of
course, he should not be doing such loose-ass research on me, but I'll
never know. I'll just hear some corporate crap about "not an exact
match for the skillset we're looking for."

I've also gotten my credit report and found various
non-authorized corporations looking into my credit history by claiming
me as a "customer." Completely illegal, or, at best based on yet more
mistaken information, transposed SSNs or other sloppiness on the part
of the data aggregators.

If you aren't concerned yet, on the basis of just these
trivial examples, then, as they say, "If ignorance is bliss, you must
be orgasmic."

1538. Major Solar Storm underway

This is very true. A typical SVGA copper cable puts out all sorts of hash (as well as the monitor!). And lotsa junk is radiated and conducted out by the power supply cable, even for the "best of the best" PC clone supplies.

I've discovered and/or engineered some workarounds, consisting of going to optical fiber instead of metal whenever possible. But my converters are usually outside the PC case so this doesn't completely eliminate the radiation from copper cabling.

I'm starting to think I should just sit inside the Faraday cage with my computer, and put all the radios outside!

Tim.

They "lumps" found on many power and data cables are ferrite cores
that attenuate the RF hash that leakes out on the conductors.
Building an RF-proof case is trivial if you don't need any
peripherals. RF comes out on the wires.

Look at a copy of the Ham Radio _The ARRL Handbook for Radio
Communications_, in any decent library or bookstore. They cover RFI
solutions.

Do you have an EMI problem ?

> MHz uplink, 29 MHz downlink) of the RS-10/11 and RS-12/13 ham satellites.

I don't think that's what the OP was asking though.

Heck, we already make massive use of frequencies above the MUF for this kind of service. Frequencies *way* above the MUF, as in above 1GHz.

Really, it would make little sense to use shortwave frequencies above the MUF for routine service from space. The MUF changes -- a frequency that won't bounce back into space today might bounce tomorrow. It makes far more sense to select a frequency that's above the highest recorded E and F-layer MUFs (i.e. at least 250MHz) and not have to worry about it.

(I wonder - but don't have the science to back it up - whether the MUF might be considerably higher for transmissions originating in space? Because they're striking the ionosphere at a shallower angle?)

Just a little item for discussion/flame

Here the basic rules for U.S. INTERNET Broadcasters......Let the discussion begin!

The DMCA governs certain requirements and rules with which persons transmitting Digital media must comply. Without limiting the applicability of all other laws, rules and contractual provisions that may govern your activities, you agree to comply with the following specific DMCA rules in connection with your Internet Broadcast Programming:

1. You may not include in your Broadcast Programming specific sound recordings within 1 hour of a request by a listener or at a time specifically designated by the listener.

2. In any three-hour period, you should not intentionally program more than three songs (and not more than two songs in a row) from the same recording; you should not intentionally program more than four songs (and not more than three songs in a row) from the same recording artist or anthology/box set.

3. Continuous looped Broadcast Programming may not be less than three hours long.

4. Retransmission's of your Broadcast Programming may be performed at scheduled times as follows:

1. Broadcast Programs of less than one-hour - no more than three times in a two-week period;

2. Broadcast Programs longer than one hour - no more than four times in any two-week period.

5. You should not publish advance program guides or use other means to pre-announce when particular sound recordings will be played or the order in which they will be played.

6. You should only include in your Broadcast Programming sound recordings that are authorized for performance in the United States.

7. You should pass through (and not disable or remove) identification or technological protection information included in the sound recording (if any).

Good

So, most will set up then in Canada.Mexico or just
to annoy them Cuba

QST de W1AW
Propagation Forecast Bulletin 20 ARLP020
>From Tad Cook, K7RA
Seattle, WA May 16, 2005
To all radio amateurs

SB PROP ARL ARLP020
ARLP020 Propagation de K7RA

This is a special edition of the Propagation Forecast Bulletin.

On Friday the Thirteenth (May 13, 2005) at 1650z a tremendous explosion near sunspot 759 blasted toward earth. The impact on the earth's magnetic field was felt at 0230z on May 15, producing an extreme geomagnetic storm.

I use a service from http://www.spaceweather.com called "SpaceWeather PHONE." I can set parameters for alerts, and the service calls my cell phone when events occur, such as the planetary K index rising above a set value. The service rang me up so many times this weekend that I finally shut the phone off. I could have gone to the web and shut it off or raised the parameters, but at the time I just wanted to roll over and go back to sleep.

On Sunday, May 15 the planetary K index reached 9. This is huge. The middle latitude, high latitude and planetary A indexes for Sunday were 44, 77 and 105 respectively, all very high values. The planetary A index predicted for Monday, May 16 is 40. Solar flux is expected to stay around 100 for Monday through Wednesday, May 16-18.

Michael Shaffer, KA3JAW is currently in Tampa, Florida. On Friday, May 13 Michael began to scan low VHF television channels because of the possibility of aurora from a coronal mass ejection on May 11. He emailed several photos he took of his television displaying KGAN, channel 2, in Cedar Rapids, Iowa. He received both audio and video for about 30 minutes after 5:00 PM local time. The distance was about 1,100 miles.

Steven Smith, K6BZ of Carmichael, California wrote to ask if "in the early period of a new solar cycle, sunspot groups tended to form in the higher latitudes on the solar disk and towards the end, favored more equatorial latitudes." This is true, and the greater emergence of sunspots toward the sun's equator later in the cycle heightens the probability that the energy from those spots will be earth-directed.

If you would like to comment or have a tip, email the author at, k7ra@arrl.net.

For more information concerning radio propagation and an explanation of the numbers used in this bulletin see the ARRL Technical Information Service propagation page at, http://www.arrl.org/tis/info/propagation.html. An archive of past bulletins is found at, http://www.arrl.org/w1aw/prop/.

Sunspot numbers for May 5 through 11 were 50, 66, 55, 79, 106, 106 and 117 with a mean of 82.7. 10.7 cm flux was 109.1, 110.4, 99.9, 101.3, 110, 119.2 and 125.3, with a mean of 110.7. Estimated planetary A indices were 6, 4, 10, 64, 11, 10 and 11 with a mean of 16.6. Estimated mid-latitude A indices were 3, 3, 10, 38, 10, 6 and 7, with a mean of 11.

As far as abrupt, disconnected seques go, that one was a doozy! You acknowledge that Newsweek irresponsibly reported a story they did not try to confirm based on an anonymous source that could be Pentagon based... or could be based out of their own editorial dept! Heck as long as they were making it up, I don't see why they didn't attribute the information to a "White House Source"!

It could almost be argued that their erroneous reporting was criminal in nature since it sparked a reaction leading to multiple deaths. You acknowledge that unidentified Muslim Clerics are now calling for a holy war against modern civilization, yet you are demonstrably gullible enough to believe this is a recent occurrence. Are you truly unaware that "Muslim Clerics" have been calling for Jihad against modern/western society for decades? You are either laughably gullible -OR- you have a blind hatred for Bush that precludes your ability to understand the full extent of the islamic extremist opinion of infidels such as yourself. What's even *more* humorous is that you appear to think those same islamic extremists would behave, believe and/or treat you any differently based on who was leading the U.S., or any other modern western govt.

So in an effort to reduce your post to its core point, correct me if the following is not spot-on: "Newsweek irresponsibly published a made-up a story and people were killed; ergo, Bush is bad".

Do you think this crap up all on your own, or ar you ripping it off of some "DNC-Leg-Humping" blog site?

Now that Newsweek admits irresponsibly reporting an entirely
unconfirmed, uncorroborated, and likely erroneous story, I think I see
an "Emily Latella" moment approaching for some of the other posters.

The way I hear it, the only incident logged where the Quran was being
flushed down a toilet was due to an **Islamic prisoner** flushing it
and other items in an attempt to stop up the toilet! How rich is
that!? Perhaps the Pentagon should publish that prisoner's name and
mug-shot so that the Muslim Clerics can issue a fatwa against him?

There should be "bubbles popping" all over the Muslim and
"Liberal/Bush-Hating" landscape, interspersed with some muted
"dammit's".

I don't think he's killfiled me yet. ;-)

He's running some newsreader software (that I've never heard of), which
must have been written in Eastern Europe, as that's where the '-2'
character set is used. Maybe he can change it, maybe not.

You don't need much ground for the radical islamic mind to go beserk and
commit murder. When dealing with the radical muslim mind, it isn't a
rational mind you are dealing with.

> In the meantime, don't think for a minute that George Bush can protect
> you. Even if he tried he couldn't.
>

Adolf Hitler was 29 when the "Great War" was over. Under the Treaty of Versailles, the victorious Allies forbade Germany to have any armed forces to speak of. The only drawback of this arrangement was that Germany was virtually defenseless to Lenin's and later Stalin's "liberation," especially if supported by the German Communist Party from within. One reason for this arrangement was that the Western Left considered Lenin and Stalin as part of the Left, and Wilhelm II or Hitler as part of the Right, and hence were sure that Lenin or Stalin could not be as evil as Wilhelm II or Hitler.

But the German middle class knew better. In the early 1930s Stalin began the "liquidation" of successful farmers and small businessmen. The massacre was filmed as a great victory of socialism over capitalism. When Goebbels showed these Soviet newsreels in Germany, the German middle class was horrified: This is what awaited them if Stalin occupied the virtually defenseless Germany with the aid of the German Communist Party.

Who was to blame for this plague called Communism? Alfred Rosenberg, a Russian German who emigrated from Soviet Russia to Germany, suggested to Hitler that Jews were to blame. According to Rosenberg, Hitler was to become an anti-Semite in order to "attract the masses."

Who could save the mortally endangered German middle class? The man who could and would challenge the Allies and abolish the Treaty of Versailles. His name was Hitler.

Those who did not want to abolish the Treaty of Versailles [the Communist Party], not Hitler's insanity (alleged on the basis of the 'Wagnerian' way he delivered his speeches), created Hitler's absolute power and hence the precipices of his absolutely evil crimes.

http://www.newsmax.com/archives/articles/2005/5/5/180943.shtml

Communism Loves Children

"In China freedom can be measured more accurately on a balance sheet than in the sum total of a man's life. "To get rich is glorious" and the freedom to attain that glory seems boundless. But the glory of the spirit, that is rationed. A "freedom" to be doled out cautiously; of course, such freedom is not freedom at all but the ultimate display of control: concession."

Communism needs children. Only children will obey the tyranny of adult delusions without question. Only the young are na&#65533;ve enough to hate all

authority and to destroy all achievement. For youth, Communism is not a delusion but an exciting, heroic cause.

Children under this satanic delusion could not be dissuaded or relieved.

The Communist spirit of resentment and violence was deeply absorbed by these kidnapped children. There was nothing to prevent the tide of megalomania. No religion could serve as a shield against the depravity of human nature to which Communism appealed.

But Communism is the god of discontent, and needs no blessing. All it needs is a heart willing to hate, willing to call envy "justice." Equality then means the violent destruction of all social and cultural distinctions. Freedom means absolute dictatorship over the people.

Sounds like a police state [Syria? Iran?], yet similar underlying conditions are developing in American youth, under our own nose.

The current resurgence of anti-Semitism in Europe is largely the work not just of Muslim fundamentalists but of liberals, leftists, strugglers against "racism"--and haters of America. Virtually no Parisian demonstration against America is without placards reading "Mort aux Juifs" (death to the Jews) . Chomsky's two pet hatreds-- America and Israel--have become linked in Europe (where his popularity is greatest) and in those scattered American outposts of European sentiment and ideology: our universities.

And no child will be left behind.

Ah, Chuck Berry. The REAL king of rock 'n' roll from my hometown of St. Louis.
Now there is a guy who needs some worldwide airplay.

But seriously, I understand shortwave isn't FM radio, I just want to hear something else besides some jerk saying that I'm going to burn in hell for not sending money.

If there is anything I have learned from Christianity, Judism, and Islam it is that these three major religions want you to do three things:
1) Give them money.
2) Kill everyone else who doesn't practice your religion in some holy masacre. (Making insults counts too.)
3) Destroy what ever part of the world that doesn't want to listen to there crap.

It's true. At this point, paganism seems rather ideal. (BTW: paganism is not satanism. The only religion that worships satan is satanism. It is not paganism. The word "pagan" as derives from the Latin word "pagus" which means "civilian".) It is far better to be treated as a civilian than a servant.

The world needs rock'n'roll. Not the new stuff but the classics like Chuck Berry and Elvis Pressly.

And Leftist NeoCOMS have killed a hundred million.

The Real Lesson of Newsweekgate

When in April EBay offered a consecrated host for sale, imagine if Catholics had rioted and seventeen people were killed.

The media would have been full of stories about the dark side of the "Christian Right."

Imagine if, when Muslims desecrated the Tomb of Joseph in Nablus in 2000, destroying it with hammers, rampaging Jewish mobs had killed dozens of Palestinians.

The establishment media response would again have inundated us with stories about the heroic Palestinians and their Israeli oppressors.

Neither of those things really happened. But seventeen people have been killed and hundreds wounded in riots by Muslims since Newsweek published its story about an American interrogator flushing a Qur'an down the toilet at the detention center at Guantanamo Bay.

And yet the media establishment seems preoccupied only with the fact that Newsweek, in publishing a false story that it has since retracted, has done a very bad thing. And that the Bush Administration must do something to calm tempers and soothe feelings in the Islamic world.

There is no excusing Newsweek's irresponsibility in this. But this is not really a story about media bias or carelessness at all. There is a much larger story that is getting hardly any attention at all. The gorilla in the living room that no one wants to notice, is that flushing a Qur'an down the toilet should not be grounds to commit murder.

This aspect of the story is being ignored by spokesmen on both the Left and the Right. After the initial reports of rioting, Juan Cole sputtered, "Whatever goddam military genius came up with the bright idea of flushing the Koran down the toilet at Guantanamo should be court-martialed, and Bush

had better get out there apologizing before this thing spirals further out of control." On the other side of the political spectrum, Paul Marshall wrung his hands in National Review: "Even if Newsweek publishes a full retraction, the damage is done. Much of the Muslim world will regard it merely as a cover-up and feel reconfirmed in the view that America is at war with Islam."

Neither Cole nor Marshall, however, made any moral judgment about the rioters. Marshall was furious with Newsweek: "It would be charitable to think that if Newsweek had known how explosive the story was it may have held off until it had more confirmation. If this is true, it is an indication that the media's widespread failure to pay careful attention to the complexities of religion not only misleads us about domestic and international affairs but also gets people killed." Cole, for his part, directed his anger at the Bush Administration: "As a professional historian, I would say we still do not have enough to be sure that the Koran desecration incident took place. We have enough to consider it plausible. Anyway, the important thing politically is that some Muslims have found it plausible, and their outrage cannot be effectively dealt with by simple denial. That is why I say that Bush should just come out and say we can't be sure that it happened, but if it did it was an excess, and he apologizes if it did happen, and will make sure it doesn't happen again (if it did)."

Neither one says anything whatsoever about a culture that condones - celebrates -wanton murder of innocent people, mayhem, and destruction in response to the alleged and unproven destruction of a book.

The question here is one of proportionate response. If a Qur'an had indeed been flushed, Muslims would have justifiably been offended. They may justifiably have considered the perpetrators boors, or barbarians, or hell-bound unbelievers. They may justifiably have issued denunciations accordingly. But that is all. To kill people thousands of miles away who had nothing to do with the act, and to fulminate with threats and murder against the entire Western world, all because of this alleged act, is not just disproportionate. It is not just excessive. It is mad. And every decent person in the world ought to have the courage to stand up and say that it is mad.

I suspect that even Juan Cole and Paul Marshall, somewhere in the back of their minds, know that it is mad too. But why don't they say so? Because Rule #1 in the establishment (Left and Right) view of this present conflict is that it has nothing to do with Islam. To bring a moral judgment to bear upon Muslim people, or to explore the ways in which Islam fuels the conflict, is therefore absolutely forbidden.

This kind of analysis, dominant as it is in the media, does the Western world an enormous disservice. The reaction to the Newsweek story in the Muslim world only shows how critical it is that the elements of Islam that give rise to fanaticism and violence be examined and confronted. Lives are at stake. But Cole and Marshall, and many others like them on both the Left and the Right, can't see this necessity through the enveloping fog of political correctness.

Robert Spencer is the director of Jihad Watch; author of Onward Muslim Soldiers: How Jihad Still Threatens America and the West (Regnery), and Islam Unveiled: Disturbing Questions About the World's Fastest Growing Faith (Encounter); and editor of the essay collection The Myth of Islamic Tolerance: Islamic Law and Non-Muslims (Prometheus). He is working on a new book, The Politically Incorrect Guide to Islam (and the Crusades) (forthcoming from Regnery).

==========
Pope fears Bush is antichrist, journalist contends.

WASHINGTON DC -- According to freelance journalist Wayne Madsden, "George W Bush's blood lust, his repeated commitment to Christian beliefs and his constant references to 'evil doers,' in the eyes of many devout Catholic leaders, bear all the hallmarks of the one warned about in the Book of Revelations--the anti-Christ."

Madsen, a Washington-based writer and columnist, who often writes for Counterpunch, says that people close to the pope claim that amid these concerns, the pontiff wishes he was younger and in better health to confront the possibility that Bush may represent the person prophesized in Revelations. John Paul II has always believed the world was on the precipice of the final confrontation between Good and Evil as foretold in the New Testament.

Before he became pope, Karol Cardinal Wojtyla said, "We are now standing in the face of the greatest historical confrontation humanity has gone through. I do not think that wide circles of the American society or wide circles of the Christian community realize this fully. We are now facing the final confrontation between the church and the anti-Church, of the Gospel versus the anti-Gospel."

The pope worked tirelessly to convince leaders of nations on the UN Security Council to oppose Bush's war resolution on Iraq. Vatican sources claim they had not seen the pope more animated and determined since he fell ill to Parkinson's Disease. In the end, the pope did convince the leaders of Mexico, Chile, Cameroon and Guinea to oppose the U.S. resolution.

Madsen contends that "Bush is a dangerous right-wing ideologue who couples his political fanaticism with a neo-Christian blood cult."

THE MOST IMPORTANT QUESTION OF YOUR LIFE

This is the most important question of your life.

The question is: Are you saved?

It is not a question of how good you are, nor if you
are a church member, but are you saved?

Are you sure you will go to Heaven when you die?

The reason some people don't know for sure if they are
going to Heaven when they die is because they just
don't know.

The good news is that you can know for sure that you
are going to Heaven.

The Holy Bible describes Heaven as a beautiful place
with no death, sorrow, sickness or pain.

God tells us in the Holy Bible how simple it is to be saved so that we can live forever with Him in Heaven.

"For if you confess with your mouth Jesus is Lord and believe in your heart that God raised Him from the dead, you will be saved." (Romans 10:9)

Over 2000 years ago God came from Heaven to earth in the person of Jesus Christ to shed His blood and die on a cross to pay our sin debt in full.

Jesus Christ was born in Israel supernaturally to a virgin Jewish woman named Mary and lived a sinless life for thirty-three years.

At the age of thirty-three Jesus was scourged and had a crown of thorns pressed onto His head then Jesus was crucified.

Three days after Jesus died on a cross and was placed in a grave Jesus rose from the dead as Jesus said would happen before Jesus died.

If someone tells you that they are going to die and then three days later come back to life and it actually happens then this person must be the real deal.

Jesus Christ is the only person that ever lived a perfect sinless life.

This is why Jesus is able to cover our sins(misdeeds) with His own blood because Jesus is sinless.

The Holy Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you would like God to forgive you of your past, present and future sins just ask Jesus Christ to be your Lord and Saviour.

It doesn't matter how old you are or how many bad things that you have done in your life including lying and stealing all the way up to murder.

Just pray the prayer below with your mouth and mean it from your heart and God will hear you and save you.

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven with You when I die. I agree with You that I am a sinner. I believe that You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins and that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour.

Thanks Lord Jesus Christ for forgiving me and saving
me through Your merciful grace. Amen.

Welcome to the family of God if you just allowed God
to save you.

Now you are a real Christian and you can know for sure
that you will live in Heaven forever when this life
comes to an end.

As a child of God we are to avoid sin(wrongdoing), but
if you do sin the Holy Bible says, "My dear children,
I write this to you so that you will not sin. But if
anybody does sin, we have one who speaks to the Father
in our defense Jesus Christ, the Righteous One."

Those of you that have not yet decided to place your
trust in the Lord Jesus Christ may never get another
chance to do so because you do not know when you will die.

Jesus said, "I am the way, the truth and the life: no one
can come to the Father(God)(in Heaven), but by me."
(John 14:6)

This means that if you die without trusting in Jesus Christ
as your Lord and Saviour you will die in your sins and be
forever separated from the love of God in a place called Hell.

The Holy Bible descibes Hell as a place of eternal
torment, suffering, pain and agony for all those who
have rejected Jesus Christ.

The good news is that you can avoid Hell by allowing
Jesus Christ to save you today. Only then will you
have true peace in your life knowing that no matter
what happens you are on your way to Heaven.

Praise the Lord!
Servant of the Lord Jesus Christ

I have been shocked to hear faithful leftists, people who never gave a second thought to the Bible, suddenly talking about Bush being the Third Antichrist as predicted by Nostradamus. W is THAT EVIL! And he has millions of American followers foaming at the mouth to eliminate all rivals to their god. Judges not ruling in accordance to the Bush Doctrine? Muzzle them, in any way possible, including murder! Muslims pissed off that the US is treating them like shit while stealing their oil? Nuke them, all of them, from Morocco to Pakistan! North Korea refusing to bow to US hegemony? Attack! Eventually Bush is going to realize that the American public will follow him directly into the lake of fire if so bidden, and then all hell will break loose-literally. The more the Muslims and North Koreans and Iraqi insurgents attack the US, the greater the screams for a Final Solution-US style-to the "problem" of the world not meekly bowing down to God W become from Bush's amen chorus in the US. There is an increasing push among the fundies to use massive nuclear strikes to destroy the world and thus force the Second Coming. This, needless to say, would abruptly end civilization and possibly humanity's reign on earth.

Went into the old QSL trunk and found the QSL letter verifying my report of January 2, 1987. V/S was Simon P. Tiori, Assistant Station Manager.

>

Actually, from what I've heard, "pagus" means "one from the provinces"
or something similar. It was the people in the far reaches of the Roman
Empire who were the last in Rome's sphere of influence to convert to
Christianity, long after big cities such as Rome and Constantinople
became Christian. The urban Christians referred derivisely to the
hillbillies in the provinces who still believed in the old gods as
"pagani".

Polytheistic religions such as Wicca DO seem to be more tolerant than
the great monotheistic faiths. Buddhism is also a nice alternative, but
it practically requires monastic study-something most Westerners aren't
willing to do. Even in predominantly Buddhist countries like Thailand,
most laypeople just celebrate major holy festivals and leave intensive
practice to the monks.

In monotheism the less tolerant, more rabid elements are quickly gaining ground, and their lust for destruction is truly frightening. They are willing to pull out ALL the stops-including nuclear war-in order to destroy the "infidels" of the other side and/or force the End Times to arrive. The Christians believe that when the Bombs fall, the righteous will conveniently be lifted up to heaven in order to avoid the tribulation to follow, and will be plunked back down after the "cleansing". I suspect that if Bush ever DOES have a nuclear holocaust, the Christians will echo the plaintive cry of the first Christian, Jesus, on the Cross: "My Lord, why have you forsaken me?"

You don't need much ground for the radical Christian mind to go berserk and commit murder. When dealing with the radical Christian mind, it isn't a rational mind you are dealing with.

You don't need much ground for the radical zionist mind to go berserk and commit murder. When dealing with the radical zionist mind, it isn't a rational mind you are dealing with.

Source record: 22276

Joe,

THANK YOU!!! Fantastic info. I'll print and follow your instructions to the letter.

I'm happy to hear that I'll get better performance in the attic than outside. The attic install is more convenient for me and I like the idea of protecting the antenna from the weather.

If I need a pre-amp what would you recommend?

I'm digitizing the RF with a 100 Msps 14-bit ADC with max scale at 5.5 dBm. Ideally, I'd like the signal to peak at around 5.5 dBm so I'll realize the full dynamic range of the "receiver". What dBm range should I expect from the Wellbrook antenna?

Thanks!
John

>Lucky...feeling bitter lately

First, how do you know the buyer was on Japan? By his email? Maybe
he lives in the US now but his email is based in Japan. And even if
he does live in Japa, he may have made arrangements with someone
stateside to accept the package. And what did she say exactly? That
she will get back or she will gat back if this guys doesn't follow
through.

GROW UP.

This is how auctions work. If you want sympathy give us your address
and we will send you a damn card. Otherwise be a mensch and accept
the fact that life is not fair.

I try to get the seller on the phone so I can evaluate them. You can
usually get a pretty good idea about someone by the way they talk and
answer your questions. Of course this doesn't work well with the
pathological liars because they believe what they're saying. :-)

I'd be interested in hearing more about the "increased noise" in the
Europa - the reviewer didn't say anything other than he noticed it. Who
knows if it's significant?

I bring plenty of power for recharging battery packs when I'm camping.
I'd gladly trade the convenience of a backlight for a little battery
drain.

Unless you've taken heroic measures or live in the woods, odds are the noise floor for your antenna will be higher than 2 microvolts.

My primary home antenna is 225 feet away from the house, with underground coax, and according to my Harris, the noise floor is right around the limit of the Europa.

If you were using the radio to chase DX in the woods, you could use an outboard preamp or an active antenna.

When I was looking for a HF-150e or a 7030+ my primary concern was finding a good radio for use when camping, and for when I'm hanging out by the pool or fishing for snook on the other side of Alligator Alley.

The HF-150e had the edge on size and would probably have cost less, the 7030+ had the edge on performance, and availability.

Both radios were designed by the same person.

1597. Radio New Zealand is off the air on 15,720 again

Newsgroup: rec.radio.shortwave
Date: 2005-05-19 04:44:42 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-7EF415.21444218052005@newssvr13-ext.news.prodigy.com>
Source record: 22281

New Zealand seems to have a continuing problems on 15,720. The station is not on the air again on this frequency. Just a few minutes ago around the 04:35 UTC time frame a carrier with no audio came up for a minute and that has been it so far this evening.

This seems to be a recurring problem and it often means that they will be missing on 11,820 when they switch to that at 04:59 UTC.

Sometimes they do show up on 11,820 and sometimes they don't show up until 07:06 UTC on 9,885.

I sent them an email last time and they said it was due to regular maintenance.

Got a carrier now with no audio at 04:43 UTC at the expected signal level for New Zealand at this time.

Actually the seller doesn't really sell radios. She sells home made baskets. That's her thing. She had a AOR 7030 and that Europa for sale for a friend as a "shack reduction sale" I was willing to take a chance even though she only had a feedback of 16 on very small sales.

Perhaps you're right and I am better off.

Thanks Pete

Looks like we are going to have to read up on this Terry. I've got a
book I have not read yet called "Radio Frequency Principles and
applications" that may shed some light on this. I'll let you know.

No Mr. Cmd.

Perhaps you would have liked it that way but here is the thread for that
auction and Steve brought up a question if it really was a Europa and not
just a black 150 and then the auction was pulled after he asked. So I wasn't
"low balling it". Some how I don't like your tune.

>
> So now you want sellers who have an item you want to disallow any overseas
> buyers so you can maybe win the auction.

That's right. It cuts down on the number of bidders so if someone states
they won't address all those other foreign bidders and and say so in the
auction, they should stick to it. There are terms that people should stick
to in life. It shows who and what they are in this world. Sorry if you don't
see that.

Again, you don't seem
> to understand how an auction works. eBay is world wide and no seller is
> obligated to disallow certain bidders just for your benefit. You really
> need to get a clue. Maybe the Jap buyer had it shipped to a friend in the
> U.S. who then shipped it to him.

This is true. I have no idea if that happened. I think it would have been
nice if the seller told me that since I was a bidder and helped bid her item
up high.

Again, the seller can do whatever
> they wish about shipping and they don't have to take your feelings into
> consideration at all.
>
>>
>> Then on top of that, when I asked the seller about her auction and the

No one has to do anything Cmd. For some reason I like to deal with humans,
not robots.

1611. Antenna experiment, coax shielded loop

Newsgroup: rec.radio.shortwave
Date: 2005-05-19 06:31:13 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-674963.23311218052005@newssvr13-ext.news.prodigy.com>
Source record: 22295

I was trying out a simple construction idea for a shielded loop antenna for SW and found that it worked well but it worked even better for BCB. I have not tried it out on long wave but it might work well there also.

I made two antennas one 25 foot and the other 40 foot in diameter. Both are vertical and are made of 50 ohm coax. The basic construction is to use part of the cable as lead in to the radio and the rest is in a loop shape of a square. It could be other shapes like circle or triangle. In order to complete the loop the center conductor on the end of the coax cable is connected to the shield of the coax about 10 foot from the end connected to the radio. The shield on the far end of the coax from the radio is not connected to anything. The part of the coax that becomes the antenna is the part that is the cable end to the place that the center conductor is connected to the shield.

I found I could make the response a little broader and impedance flatter by connecting the shield on the cable end with 50 ohm resistor to the same shield point as the center conductor was grounded to on the shield with some loss of signal.

The loop has a real nice null. I found that I could null BCB stations and even WWV at 5MHz with the 25 foot loop. The null at 10MHz was not very good and the null was non existent at 15MHz. The nulling was tried out on daytime signals.

These small loops picked up BCB stations very well and yet local noise that I have around here aplenty is practically absent. The AM broadcast band has always been noisy at my location and this shielded loop works wonders on my table top radios. These loops need no amplification, no tuning and are very easy to make.

They were missing for a while on 11,820. I checked back at 06:35 UTC and
they were on the air with a fine signal so some time between 05:15 and
06:35 they came on the air.

So how are you handling the balanced/unbalanced issue?

These designs are in the ARRL Antenna book. Generally a second loop is used to couple to the first loop to act as a balun. [Mutual inductance between the loops couples the signal.]

The shield should be broken at the far end of the antenna, i.e. not the end that goes near the radio.

Since you are nulling signals, I gather the loop is vertical, but 40ft in diameter seems pretty hard to believe. We are talking 3 to 4 stories high.

1616. Re: What's a better HF receive-only antenna: MFJ-1024 or a loop?

It sounds to me like you are just going to digitize RF and try to find signals. I'll put a scope on the output of my Wellbrook and see how much signal is present, but I suspect I won't see much on a scope. The manufacturer knows the antenna will be going to a receiver with gain. I'm very certain you will need additional gain before the ADC. dBM should be quite meaningless if you are just digitzing RF since there will be many signals present. [dBm would make sense if one sine wave was present.] The sum of all RF will have many sine wave, so the notion of the "crest factor" is relevant.

One thing to note is that while the Wellbrook is specified for response up to 30MHz, it is picking up signals well beyond that limit. I have no trouble getting air band navigation beacons with the Wellbrook. Obviously it isn't optimal at 3x the factory spec, but you will probably have to significantly antialias the signal before digitizing. I bet it is just loaded with FM broadcast signals.You would probably benefit from adding some sort of AGC circuit too.

.
IF you have a Single 'piece' of Wire Antenna Element
connected to a MLB (UnUn) along with a Ground Wire
and Coax Cable. Then in general most people would
call this a Long Wire Antenna; and many would more
specifically call it a Random Wire Antenna.
.
IF you have Two Equal 'pieces' of Wire Antenna Element
connected to a Balun along with a Ground Wire and Coax
Cable. Then in general most people would call this a
Dipole.
.
Dipole by Design {Tuned} :
If the Two Equal 'pieces' of Wire Antenna Element are
"Cut" to a specific length for a given frequency. Then
the Two Equal 'pieces' of Wire Antenna Element {Together}
can be said to be "Tuned" or they can be referred to as
a "Tuned Dipole Antenna".
.

Hindus have some very radical elements in their country. They are a
small but intolerant minority that kill Muslims and Christians, even
though Chritians have been there since the times of the Apostles and
Muslims were there shortly after the Prophet died.

Wiccans and other more modern Pagans HAVE to be moretolerant since
they are an extemely small monority in the world. Though I do know
some Pagans who seem nearly as intolerant as some fundamentalist
Christians.

>In monotheism the less tolerant, more rabid elements are quickly gaining

Never.................a person's word is supposed to be as good as gold. Too bad that being responsible isn't looked at as a virtue anymore. Years ago, I used to work in customer service for one of the major banks. Our department head pounded it into us that when taking care of a customer problem, even if we didn't have the solution yet, we should call them from time to time to let them know that we were still working on a solution to their problem.

If that was the case, that is what she should have said. Nothing that
important; it is to be expected when dealing with such a large section of
society. There used to be a big flea market on Maxwell Street (east side of
Chicago) every weekend.
You could find almost anything there at any given time, from rare items to
outright junk.
I alway tell my friends "Maxwell Street didn't disappear......it just moved
to the Internet". For those of you who saw the Blues Brothers, the scene
where John Lee Hooker was playing the song Boom Boom was on Maxwell Street.

FNC's 25-54 Prime "Downward Spiral"
April '05 marks "the sixth consecutive month where FNC declined versus prior month in M-F, primetime P25-54 (every month since Nov '04)," CNN's press release says. The 25-54 demo is coveted by advertisers. One insider called it a "downward spiral." FNC still has more demo viewers than CNN, though (443k vs. 304k in April). Here are FNC's month-by-month weekday primetime averages in the 25-54 demographic:

Oct. 04: 1,074,000 / Nov. 04: 891,000 / Dec. 04: 568,000 / Jan. 05: 564,000 / Feb. 05: 520,000 / March 05: 498,000 / April 05: 445,000

Also: In April 2005, FNC's weekday primetime demo average decreased 25% compared to the year-ago, while CNN increased 27%.

I use powered subwoofers (a form of biamplification) so I don't have
to worry about high power on my 16g speaker wires. That being said,
the Rane Pro Audio Reference spake thusly:

''damping factor: Damping is a measure of a power amplifier's ability
to control the back-emf motion of the loudspeaker cone after the
signal disappears. The damping factor of a system is the ratio of the
loudspeaker's nominal impedance to the total impedance driving it.
Perhaps an example best illustrates this principle: let's say you have
a speaker cabinet nominally rated at 8-ohms, and you are driving it
with a Rane MA 6S power amp through 50 feet of 12 gauge cable.
Checking the MA 6S data sheet (obtained off this web site, of course),
you don't find its output impedance, but you do find that its damping
factor is 300. What this means is that the ratio of a nominal 8 ohm
loudspeaker to the MA 6S's output impedance is 300. Doing the math [8
divided by 300] comes up with an amazing .027 ohms. Pretty low.
Looking up 12 gauge wire in your handy Belden Cable Catalog (... then
get one.) tells you it has .001588 ohms per foot, which sure ain't
much, but then again you've got 100 feet of it (that's right: 50 feet
out and 50 feet back -- don't be tricked), so that's 0.159 ohms, which
is six times as much impedance as your amplifier. (Now there's a
lesson in itself -- use big cable.) Adding these together gives a
total driving impedance of 0.186 ohms -- still pretty low -- yielding
a very good damping factor of 43 (anything over 10 is enough, so you
don't have to get extreme about wire size). [Note that the word is
damp-ing, not damp-ning as is so often heard -- correct your friends;
make enemies.] ''

.....

PANORAMA

Iraq
Tony & the Truth
RECORDED FROM TRANSMISSION: BBC-1 DATE: 20:03:05
.....

JOHN WARE: Two years ago tonight the Prime Minister was preparing to
broadcast to the nation he was taking the country to war.

TONY BLAIR: Tonight British Service men and women are engaged from
air, land and sea. Their mission ï¿½ to remove Saddam Hussein from
power and disarm Iraq of its weapons of mass destruction.

WARE: Mr Blair had said the intelligence services had showed beyond
doubt that Iraq had weapons of mass destruction.

BLAIR: There has been a real concern on our part not to exaggerate
the intelligence that we get.

WARE: Yet some of Mr Blair's claims about the intelligence were
exaggerated.

BLAIR: The intelligence picture they paint is one accumulated over
the last four years. It is extensive, detailed and authoritative.

WARE: We now know that was not quite the picture the intelligence
services painted to him.

ROBIN COOK: He knew perfectly well what he was doing. I think there
was a lack of candour.

BLAIR: I cannot bring myself to say that I misrepresented the
evidence since I do not accept that I did.

WARE: But there are many in the country who think he did.

Rear Admiral NICK WILKINSON
Secretary, D-Notice Committee
1999-2004
The government perhaps allowed the public to be misled as to the
degree of certainty about weapons of mass destruction.

WARE: The Prime Minister remains utterly convinced he was right to take military action. This is the story of what Mr Blair didn't tell us before sending British troops into battle.

BLAIR: What I do not in any way accept is that there was any deception of anyone.

WARE: Is he someone whose word you still trust?

CARNE ROSS
First Secretary, UK Mission to the UN
1998-2002
I personally donï¿½t trust him, no. No, not on.. this was such a fundamental.. such an important, such a huge thing to send young men off to war. I'm afraid the government did not tell the whole truth about the alleged threat that Iraq posed, that's why I think it's a tawdry story.

Reconstructions in this film are based on public sources and conversations with some participants

8 March 2002

WARE: On Friday the 8th March 2002 a top secret briefing paper on Iraq was sent to the Prime Minister. It was almost exactly 12 months before he took Britain to war.

[reconstruction]

BLAIR: [knock on door] Come in.

Morning Tony, your papers.

BLAIR: Thank you.

Mr Blair was told the Bush administration was considering overthrowing Saddam Hussein and invasion was the only way of doing this, but it would require a legal justification. The Prime Minister was advised: "None currently exists." Nevertheless Mr Blair would make a commitment to regime change, this would be a radical departure in British foreign policy which he withheld from most members of his cabinet.

11 March

On Monday morning the American Vice President Dick Cheney arrived at No.10. The Prime Minister had been briefed that Saddam posed no greater threat now than in recent years. But at his press conference Mr Blair made no mention of that crucial qualification. He had decided that he and President Bush were going to row back the tide of proliferation and that Iraq was the place to start.

11 March 2002

What evidence can you lay before the world that Saddam Hussein does have, or shortly will have, the capability to threaten not only his

own people but countries in Western Europe and indeed the United States itself?

BLAIR: If I can answer first of all that there is a threat from Saddam Hussein and the weapons of mass destruction that he has acquired is not in doubt at all. Of course Al-Qaeda would use chemical or biological or even nuclear weapons of mass destruction if they could.

14 March

WARE: The next day in Washington Mr Blair's foreign affairs and security adviser met the Bush administration. Sir David Manning sent a note to Mr Blair of his conversation. What Sir David said leaked out last autumn.

Memo
From: Sir David Manning,
Prime Minister's Foreign Affairs Adviser
To: Prime Minister

We spent a long time at dinner on Iraq. It is clear that Bush is grateful for your support and has registered that you are getting flack. I said you would not budge in your support for regime change.

ROBIN COOK MP
Foreign Secretary 1997-2001
Leader of the House 2001-2003
I think the real dishonesty of the government's position is that Tony Blair could not be frank with the British people about the real reason why he believed Britain had to be part of an invasion which was to prove to the United States President that we were his most reliable, most sound ally. That was why he committed himself to President Bush. I donï¿½t deny that Tony Blair genuinely believed that there were illegal weapons inside Iraq but the evidence for it was always very thin.

WARE: But he believed it?

COOK: The reality is that he believed in the evidence because he needed to believe in the evidence.

WARE: Mr Blair was certainly warned the intelligence was thin by the government's key joint intelligence committee. Although the committee advised that Saddam was able to produce chemical and biological agent, they also said there was no firm evidence he was still making weapons. And Mr Blair was told the available intelligence was sporadic and patchy. What little intelligence there was coming in from Iraq was seen by the chief intelligence analyst on weapons of mass destruction at the Ministry of Defence.

Dr BRIAN JONES
Defence Intelligence Staff

1987-2003
The intelligence we had certainly wasn't detailed. I mean this was one of our major problems, there were some very general statements in intelligence that raised suspicions. It certainly didn't allow definitive statements or definitive assessments to be made.

WARE: In Washington the British ambassador had been discussing Mr Blair's commitment to regime change with the Bush administration at Sunday lunch.

18 March

MEYER: Memo to Sir David Manning, No.10 Downing Street. Confidential and personal.

WARE: Sir Christopher Meyer reported back to No.10 on this latest meeting.

Memo
From: Sir Christopher Meyer,
Ambassador to the USA
To: Prime Minister's Foreign Affairs Adviser
Point 2 on Iraq, I opened myï¿½ sticking very closely to the script that you used with Condo Rice last week. We backed regime change but the plan had to be clever, and failure was not an option. It would be a tough sell for us domestically.

ANTI WAR DEMONSTRATION

WARE: But No.10 already had a plan for this.

Sunday Times 24 March 2002
Alistair Campbell, Downing Street's communications chief, told American reporters last week that a dossier of allegations compiled by Whitehall and the intelligence services would be presented publicly. The dossier would prove, sources in London said, that Saddam is manufacturing weapons of mass destruction.

The Mirror 12 March 2003
The Prime Minister is set to use the dossier of death to convince Britain to join the US in attacking Iraq.

WARE: In Whitehall officials liaising between the intelligence services and the media on sensitive issues heard there was disquiet at using such week intelligence for public relations. In charge of the defence notice committee was Rear Admiral Nick Wilkinson.

Rear Admiral NICH WILKINSON
Secretary, D-Notice Committee
1999-2004
The middle ranking people had severe doubts and that was apparent to me and people like me. They knew that Saddam Hussein had had weapons of mass destruction and an R&D capability and they were not sure what he'd done with it since the First Gulf War, so they thought he could

have it but they weren't sure.

WARE: But the Prime Minister was sure, in fact he said he was certain.

4 April 2002

BLAIR: We know that he has stock piles of major amounts of chemical and biological weapons.

WARE: On what did Mr Blair base this assertion. No recent assessment from the Joint Intelligence Committee had claimed as much.

Memo
From: Peter Ricketts,
Foreign Office Political Director
To: Foreign Secretary

22nd March, 2002. Confidential and personal to the Secretary of State headed Iraq Advice to the Prime Minister.

WARE: The Political Director of the Foreign Office, Peter Ricketts, wrote a candid note to the Foreign Secretary Jack Straw. He advised that the Prime Minister and the President should get the threat in perspective.

RICKETTS: First the threat, the truth is that what has changed is not the pace of Saddam Hussein's WMD programmes but our tolerance of them post 11th September.

WARE: To persuade the public war might be necessary, Mr Ricketts said the government would have to be more convincing.

RICKETTS: To get public and Parliamentary support for military operations we have to be convincing that the threat is so serious / imminent that it is worth sending our troops to die for.

WARE: The Prime Minister made his claim about Saddam having stockpiles of weapons as he was about to meet President Bush at his ranch in Texas. No.10 seems to have had high hopes of Mr Blair's influence over Mr Bush.

April

ANDREW MARR REPORTING: The word that is being used in No.10 quite remarkably, I think, is that Tony Blair regards himself as President Bush's strategist when it comes to Iraq. He is as keen.. at least as keen as President Bush to see the end of Saddam Hussein and wants him out. What they will be discussing is how to get there.

WARE: The President wanted to know from his closest ally if he could expect coalition forces to help an invasion. Mr Blair wanted to know if Mr Bush would revive the Middle East Peace Process before any bombing started. But this seems not to have been set as a condition by Mr Blair, it was more of a "big ask" an official present at the

summit told us.

BUSH: We'll see everybody tomorrow.

REPORTER: Mr President, will the Secretaryï¿½.

BUSH: As is said, we'll see you tomorrow, and I know you can't wait and neither can I.

REPORTER: Okay.

BUSH: And neither can the Prime Minister for that matter.

WARE: Privately Mr Blair had already promised the Bush administration he wouldn't budge in his support for regime change. But as No.10 had also explained to the Americans, Mr Blair had to manage press, a parliament and public opinion, it was very different from anything in the States. So the Prime Minister was much more nuanced in public than his host about his policy.

6 April 2002

BUSH: Good morning.

BLAIR: You know it has always been our policy that Iraq would be a better place without Saddam Hussein, but how we now proceed in this situation, how we make sure that this threat that is posed by weapons of mass destruction is dealt with, that is a matter that is open. And when the time comes for taking those decisions we will tell people about those decisions.

WARE: This seems to have been too coded for the plain speaking President, he left no doubt about where he was going.

BUSH: Maybe I should be a little less direct and be a little more nuanced and say we support regime change.

WARE: In New York at Britain's UN mission the diplomat responsible for Iraq had no idea No.10 was now committed to helping the Americans overthrow Saddam. In meetings with other diplomats he was still promoting British policy towards Iraq as being the containment of any threat through sanctions and weapons inspections.

CARNE ROSS
First Secretary, UK Mission to the UN
1998-2002
This is what we were instructed to say. The public argument was of course that it was illegal. You can't just go around and topple governments you donï¿½t like, that's not legal, and that's what we would say in the UN because the UN is a place of law and of rules. But privately what we would discuss with our allies was that we thought it was a bad idea because we thought it would be destabilising and could potentially lead to chaos in Iraq.

WARE: He must have felt, not to put too fine a point on it, a bit of a prat, I mean talking to the State Department promoting one policy when in fact presumably people in the State Department knew jolly well that the part of the government.. the British Government that really mattered, namely Downing Street, was promoting a completelyï¿½ was signed up anyway to a totally different policy.

ROSS: Yes, I think that's more or less right.

FINANCIAL TIMES
April 20 / April 11 2002
Blair dossier on Iraq is delayed indefinitely.

WARE: In London there was still no sign of No.10's much heralded intelligence dossier which promised to show why Saddam was a threat to Britain.

21 April 2002

DAVID FROST: Someone else said to the FT it was insufficient to convince critics within the Labour Party that the full scale offensive against Iraq was justified. Is that why it was pulled?

BLAIR: No, and it wasn't pulled. Both of those things are absolutely wrong.

WARE: Absolutely wrong? A memo has since been leaked that shows the Financial Times was on to something.

Memo
From: Peter Ricketts,
Foreign Office Political Director
To: Foreign Secretary
I am relieved that you decided to postpone publication of the unclassified document. My meeting yesterday showed there was more work to ensure that the figures are accurate and consistent with those of the US. But even the best survey of Iraq's WMD programmes will not show much advance in recent years. The programmes are extremely worrying but have not, as far as we know, been stepped up.

July

WARE: But the American military were stepping up manoeuvres in the Gulf region. For the Whitehouse it was no longer whether there was going to be an invasion, it was when.

RICHARD HAASS
Director of Policy Planning
US State Department 2001-2003
Well the first time I came away persuaded that a war was 99% likely was in early July of 2002 during one of my regular sessions with Condoleeza Rice, then the National Security Adviser. I was uneasy about it, thought that it raised questions to me at least whether it was worth it, and when I began to raise this concerns Condi's reaction was essentially save your breath, hold your fire, this decision has

pretty much been made, this is where the President is.

WARE: By now MPs were asking Mr Blair about British military planning.

16 July 2002

ï¿½.are we then preparing for possible military action in Iraq?

BLAIR: No, there are no decisions that have been taken about military action.

WARE: True, no formal military commitment had been given, but British troops were already preparing for possible armed action. The very question Mr Blair had been asked. As he spoke, Britain had already been participating for three weeks in joint war planning with the Americans.

BLAIR: I constantly say to people there are no decisions that have been made in relation to Iraq at all.

ROBIN COOK MP
Foreign Secretary 1997-2001
Leader of the House 2001-2003
It's perfectly plain from the events that Tony Blair probably committed himself to an invasion back in spring of 2002, he could never openly admit to that, he could never be frank that his main motivation was to demonstrate Britain was the closest ally to a republican President of the United States.

23 July

WARE: A week later the Prime Minister chaired a highly sensitive meeting. It may prove to be one of the most significant on his road to war. Just back from Washington was the head of MI6. "Military action, he reported, was inevitable.

Reconstruction based on Lord Butler's Inquiry

WARE: Several well placed sources have told us that Sir Richard Dearlove was minuted as saying: "The facts and the intelligence were being fixed round the policy by the Bush administration." By 'fixed' the MI6 chief meant that the Americans were trawling for evidence to reinforce their claim that Saddam was a threat. Not for the first time the Foreign Secretary questioned whether the threat was sufficient to justify invasion.

PHILIPPE SANDS QC
Author "Lawless World"
My understanding is that at that meeting Jack Straw made clear I think his view that "the case was thin" as it was put and that other countries, such as Libya or Iran or North Korea, had a greater weapons of mass destruction capability than Iraq.

WARE: The Prime Minister was now in a race against time to persuade Labour MPs and the public that intelligence on Iraq justified invasion. But as it stood the government knew the intelligence might not be convincing. Two thirds of MI6's reports on Iraq came from just two main sources. MI6 was now tasked to extract as much intelligence as possible from their few agents.

Dr BRIAN JONES
Defence Intelligence Staff
1987-2003
There was an appeal, if you like, for people to look and think very closely about the evidence that was available.

WARE: This intelligence trawl was intended to build up the government's dossier. News that the dossier was going to be reworked soon spread around Whitehall.

JONES: It was mentioned to me by a colleague in the Margins of a meeting in Whitehall. Our shared reaction was that that would be a considerable challenge because of the relatively sparse nature of the intelligence available on Iraq's WMD.

WARE: The Bush administration was so convinced the British Prime Minister had committed himself to regime change that some of them began to talk publicly about having allies.

August

JOHN BOLTON
United States Under Secretary of State
Let there be no mistake, our policy insists on regime change in Baghdad. We are content that at the appropriate moment we will have the requisite degree of international support.

But if you donï¿½t have it, and all the indications are that at the moment you wont, then what?

BOLTON: We will have it Mr Humphries.

WARE: Another Bush insider also said he was confident about one ally in particular ï¿½ Britain.

RICHARD PERLE
US Defence Policy Board
Our European allies are just not relevant to this, and the one of some importance, the United Kingdom, is, I believe, going to be with us.

WARE: Remarks like these put the Foreign Office in a spin. The Foreign Secretary flew to America to interrupt the holiday of the US Secretary of State, Colin Powell. "We understand" Jack Straw complained "you've outed us." He said: "The British government had yet to prepare public opinion."

[DEMONSTRATION]

"Stop this filthy attack, any excuse to bomb Iraq. Tony Blair take care."

WARE: Half the country was still opposed to war. Mr Blair decided now was the time to publish the dossier, the Joint Intelligence Committee was to approve. The demands from Downing Street on the intelligence services to provide more material became urgent.

"No.10, through the Chairman, want the document to be as strong as possible within the bounds of available intelligence. This is therefore a last call for any items of intelligence that agencies think can and should be included."

WARE: Was Downing Street now doing what the chief of MI6 had warned that the Bush Administration was doing, trawling around for new intelligence to fit its new policy.

At the Hutton inquiry the Prime Minister was asked why he chose September to publish the dossier.

Reconstruction based on Prime Minister's evidence to Lord Hutton's Inquiry

We have also heard that on the 3rd September you do announce that the dossier is going to be published.

BLAIR: Yes.

What changed?

BLAIR: What changed were really two things which came together. First of all there was a tremendous amount of information and evidence coming across my desk as to the weapons of mass destruction and the programmes associated with it that Saddam had. There was also a renewed sense of urgency again in the way that this was being publicly debated.

WARE: It now seems less surprising that so much information was coming across the Prime Minister's desk, after all MI6 had gone looking for it following that crucial meeting chaired by him in July when it was decided to build up the intelligence case.

WARE: Mr Blair has always denied the purpose of the dossier was to make the case for war. As the Americans built up their forces in the Gulf, he kept saying: "No decisions had been taken." Yet privately he had been told war was inevitable which might explain why the Prime Minister recalled parliament in September to launch the dossier.

24 September 2002

BLAIR: I am aware of course that people are going to have to take elements of this on the good faith of our intelligence services. But this is what they are telling me,. the British Prime Minister and my senior colleagues. The intelligence picture they paint is one accumulated over the last 4 years, it is extensive, detailed, and

authoritative.

WARE: True the Joint Intelligence Committee had changed Iraq had a chemical and biological weapons capability. But only two weeks earlier they'd reminded the Prime Minister their judgment was based on limited intelligence, not that you'd have known that from the dossier.

It concludes that Iraq has chemical and biological weapons, that Saddam has continued to produce them, that he has existing and active military plans for the use of chemical and biological weapons which could be activated within 45 minutes.

WARE: The government's claims that Iraq was now actively making weapons which could be swiftly deployed were based substantially on just two new intelligence sources.

12 September

Both sources had supplied this information since MI6's call in July went out to build up the intelligence base. Mr Blair was briefed about both sources by the Chief of the Secret Intelligence Service, Sir Richard Dearlove, just days before he presented his dossier to Parliament. Sir Richard told Mr Blair that one of the two new sources was claiming to know where chemical agent was being produced but he was untried and untested.

Reconstruction based on Lord Butler's Inquiry

DEARLOVE: I'd like to brief you on SIS' main sources, including a new source on trial. The new source is potentially important. I can give you our understanding of his access, however the case is developmental and the source remains unproven. But if you're happy I'llï¿½.

WARE: The second new source was linked to an Iraqi opposition group with an obvious interest in toppling Saddam. SIS had only three other main sources, and Mr Blair was told their reports were unremarkable or hearsay. What the Prime Minister told Parliament, however, had none of these qualifications.

24 September 2002

BLAIR: His weapons of mass destruction programme is active, detailed and growing. The policy of containment is not working, the weapons of mass destruction programme is not shut down, it is up and running now.

WARE: Yes saying you think that all the way through he knew how thin it was.

ROBIN COOK
Foreign Secretary 1997-2001
Leader of the House 2001-2003
He saw the evidence, he probably saw more of the evidence than any other single person in government, therefore he was well placed to judge how thin it was.

WARE: But he said it was extensive, detailed and authoritative. Are you saying he made thatï¿½.

COOK: I think you'll have to ask him how he justifies that.

WARE: But this is quite an important point, this gap between what we now know he knew and what he said in public. You still are of the view that that gap can be explained by good faith, not by dishonesty.

COOK: I've no doubt he believed that those weapons were there. What surprised me, astonished me, about the September dossier was how one-sided it was. It was propaganda. It was not an honest presentation of intelligence.

24 September 2002

BLAIR: There has been a real concern on our part not to exaggerate the intelligence that we get but I have to say that.. I mean one of the things that is difficult to reflect for very obvious reasons is the credibility of it and we rate the credibility of what we have in relation to this very high. I'll say no more than that.

WARE: But there wasn't much more to say anyway about the intelligence on Saddam's weapons. Lord Butler's review of Britain's intelligence on Iraq said: "We were struck by the relative thinness of the intelligence base."

By early autumn the Americans were planning for a likely invasion early in 2003. The Ministry of Defence stepped up Britain's Iraq planning. At Camp David the Prime Minister met President Bush, there he urged Mr Bush to seek international backing through the UN for any action against Saddam. Mr Blair has subsequently said this about what transpired at the summit.

BLAIR: There was no detailed discussion of the military option at that time because we believed that it was possible to avoid conflict.

8 July 2003

WARE: No detailed discussion about the military option but there was a firm commitment by Mr Blair to provide British troops. According to a more recent account source direct to the President himself. The Prime Minister has also said this about what happened at Camp David:

2 June 2003

BLAIR: The idea that I made some secret agreement with George Bush back last September that we would invade Iraq in any event at a particular time is also completely and totally untrue.

WARE: Again the two leaders may not have agreed a particular time for an invasion, but Mr Blair had already decided the UN should not have the last word as to whether they should invade. When the Prime Minister pledged British troops, he is said to have looked the President in the eye and pledged: "I'm with you." The President

then told Mr Blair's aides: "Your man has Cahones ï¿½ Spanish slang for male courage. For Mr Blair, UN weapons inspectors were the key to getting rid of Saddam. They had packed their bags in Iraq in 1998 after the dictator had ceased meaningful cooperation. The Prime Minister and the President had decided to get them back by means of a new disarmament resolution. We now know that in Washington in March 2002 there had been a discussion at the British Embassy on how sending back the inspectors might be used to trigger an invasion. The Ambassador, Sir Christopher Meyer, sent an account of that discussion back to London. It has since leaked out.

Memo
From: Sir Christopher Meyer,
Ambassador to the USA
To: Prime Minister's Foreign Affairs Adviser
We backed regime change but the plan had to be clever and failure was not an option.

WARE: This clever plan involved getting the UN Security Council to pass a tough new disarmament resolution.

[memo continues] The US could go it alone if it wanted, but if it wanted to act with partners there had to be strategy for building support for military action. I then went through the need to wrong foot Saddam on the inspectors.

[playback]
I then went through the need to wrong foot Saddam on the inspectors.

JOHN WARE
Wrong foot means to trick or trip up. Was Mr Blair going to the UN to seek a legal device, a new disarmament resolution confident that it would trip up Saddam so that he could join the Americans in an invasion which would otherwise be illegal. As the Prime Minister was advised early on regime change was unlawful.

If you find a legal device for something which starts out as being illegal, does that make it legal?

Sir JEREMY GREENSTOCK
UK Ambassador to the UN
1998-2003
Well I donï¿½t agree with your slightly pejorative use of the word device. The fact is that theï¿½

WARE: Routeï¿½ route.

GREENSTOCK: ï¿½ business of the first Gulf War had not been finished in disarmament terms. This had to be dealt with. It wasn't a device, it was unfinished business which is a different matter.

WARE: Are you clear in your own mind now, what was really propelling the Prime Minister was regime change, or was it disarmament.

ROBIN COOK MP
Foreign Secretary 1997-2001
Leader of the House 2001-2003
No, what was propelling the Prime Minister was the determination that he would be the closest ally to George Bush. His problem is that George Bush's motivation was regime change. It was not disarmament.

Radio Monte Carlo Middle East

BLAIR: So far as our objective, it is disarmament, not regime change. That is our objective. I've got no doubt either that the purpose of our challenge from the United Nations is disarmament of weapons of mass destruction, it's not regime change.

November 2002

WARE: In November the UN weapons inspectors did return to Iraq, the British and Americans having persuaded the Security Council to pass a tough new disarmament resolution 1441.

8 November 2002

BLAIR: Iraq now has a final opportunity to comply with its international and legal obligation by giving up once and for all its weapons of mass destruction. If it does not, then the consequences are clear.

WARE: The Iraqis were slow to give information, but this time they didn't stop the inspectors from having unimpeded access to every suspect site. But the Inspectors were not turning up any chemical or biological weapons.

HANS BLIX
Executive Chairman UNMOVIC
2000-2003
The further he came of that in January and February 2003 the more sceptical the guy became, in particular when we found no weapons of mass destruction in about three dozens of sites which had been given to us by intelligence, and then we said to ourselves they claim these are the best sites they have, and if this is the best, what is the rest?

January 2003

[NEWS]
The Paras will soon be on their way, just part of a British deployment as big as the Gulf War.

WARE: But British troops wouldn't be able to fight alongside the Americans unless government lawyers concluded that an invasion was justified by international law. The Prime Minister trained as a lawyer and often stressed that he would be bound by this.

25 July 2002

BLAIR: What is important is that whatever action we take, should we take action, it is done in accordance with international law.

WARE: But Mr Blair had a problem. While troops were gearing up for war, Foreign Office lawyers said the new UN resolution 1441 on its own did not make war lawful. The Security Council would have to vote for a second resolution explicitly authorising war. But the Foreign Secretary thought a second resolution was not essential. Essential or not, the Prime Minister was desperate to get one, otherwise it would be difficult to carry the country or Labour MPs to keep to his commitment to President Bush. But without American diplomatic muscle he hadn't a hope of securing a second resolution.

RICHARD HAASS
Director of Policy Planning
US State Department 2001-2003
I donï¿½t know of any American enthusiasm for a second resolution. The feeling was that 1441 had in it just about everything you'd want, all the demands of Iraq as well as the legitimacy if you will that you'd need when it called for all serious and potentially serious consequences.

WARE: At the end of January the Prime Minister flew to Washington. He urged the President to help him win over the UN Security Council. The President granted his closest ally this as a favour, though he didn't sound very enthusiastic.

31 January 2003

BUSH: Any attempt to drive the process on for months will be resisted by the United States, and as I understand the Prime Minister, I'm loathe to put words in his mouth but he's also said weeks not months.

WARE: Privately the Americans had explained to the British that they would work to get a second resolution but only so long as it didn't delay their military timetable which had scheduled an invasion in about a month. On his return to Britain Mr Blair was questioned about the Bush administration's commitment to helping Britain get a second resolution.

3 February 2003

Is there any difference of opinion at all or difference of emphasis between the US and United Kingdom government on the need and extreme desirability of a second UN resolution?

BLAIR: Mr Speaker, no, I donï¿½t think there is any difference between us on this.

WARE: But he knew that there was. No.10 was pressing the Americans to delay the invasion to give the inspectors more time to find weapons. Without them Mr Blair had been told by his own officials he was most unlikely to get a second resolution. Early in the New Year the British had asked for a delay until April, but the Americans just

wiped that away an official told us.

February

In Britain, opposition to war was becoming more vocal. A million protesters in London took to the streets, but that didn't stop the military momentum. Thousands of British troops were now training in the desert. In public the Prime Minister continued to maintain no decisions had been taken. But on the 20th February he confided in Hans Blix that one had.

HANS BLIX
Executive Chairman UNMOVIC
2000-2003
He said, if I remember rightly, that it was until the end of the month that action was fairly imminent at that time, and "end of the month" was an expression that he used.

March

WARE: Until now Iraqi cooperation had been limited, but by early March it improved dramatically as these pictures, never before seen, show. The Iraqis allowed inspectors to destroy Al-Samud missiles. No.10's clever plan was not going quite to plan.

BLIX: As we got closer to the war the will to go to war went up like this but the evidence went down in the other direction.

WARE: By the end of the first week of March 27 Al-Samud missiles had been destroyed and the Iraqis were committed to the UN destroying all 97. But even before the destruction started, the Prime Minister dismissed this. Saddam was still playing cat and mouse.

28 February 2003

BLAIR: The moment I heard earlier in the week that Saddam Hussein was saying he would not destroy the missiles was the moment that I knew later in the week that he would announce just before Dr Blix reported that he would indeed destroy these missiles. But this is not a time for games.

WARE: But at the UN the head of the weapons inspectors did not share Mr Blair's certainty the dictator was still playing games.

7 March, UN Security Council

BLIX: We are not watching the breaking of toothpicks. Lethal weapons are being destroyed. One can hardly avoid the impression that after a period of somewhat reluctant cooperation there has been an acceleration of initiatives from the Iraqi side since the end of January.

WARE: Mr Blair has denied he set out to wrong foot Saddam through UN inspections as No.10's clever plan had envisaged. His goal and the

President's was disarmament.

8 July 2003

BLAIR: I recall the exact conversation and I said to him look, you have to realise, if Saddam Hussein cooperates fully with the inspectors we have to take yes for an answer. If that happens there's no conflict, and he agreed with that fully.

WARE: But would the American President really take yes for an answer? Mr Bush had already said he was committed to getting rid of Saddam's regime. The dictator may have begun to cooperate meaningfully with the inspectors. But Mr Blair now sought to dissuade the Security Council this was a sham. He needed enough votes to win the second resolution to persuade MPs an invasion would be lawful.

In New York the secret intelligence service MI6 asked for a meeting with the Mexican Ambassador to the UN.

ADOLFO AGUILAR ZINSER: This was in a room, a sealed room that closed like a safe deposit box in a bank, and full of all of this you know.. mystery.

WARE: MI6 were trying to persuade Mexico and other countries on the Security Council that there was an explanation for the failure of the inspectors to find any weapons. Saddam was hiding them.

ADOLFO AGUILAR ZINSER
Mexican Ambassador to the UN
2002-2003
And they had this pile of files on the table and there were three, four officers, and they begin to show us in a map. I asked them: "Do you have full proof of the existence of the weapons in any one of this particular sites that you are referring to?" And the MI6 officer told me: "No, we donï¿½t."

WARE: We donï¿½t?

ZINSER: "We donï¿½t." It was very clear that they didn't have the proof, but they have circumstantial evidence of a funny behaviour, of a suspicious behaviour. But I knew that. We all knew that because that was what we were getting from the inspectors.

WARE: So you left that meeting less convinced than you were, not more convinced, less convinced.

ZINSER: Less convinced.

Sir JEREMY GREENSTOCK
UK Ambassador to the UN
1998-2003
We didn't have.. you know.. there weren't people inside Iraq, we didn't have people placed inside Saddam's regime. It was all more remote intelligence than that. There were ideas on where this stuff

might be. There was a very strong feeling that he might have shifted some of it into Syria or put it in mobile facilities, orï¿½ after all, he buried part of his airforce and the cameras in the sky never saw them until the wind blew away the sand and they appeared a few months later. And no, we were convinced there was something there.

WARE: Saddam Hussein had once been the Arab strong man of the Middle East, but now some of his weapons the UN inspectors were checking seemed to be more of a threat to his own soldiers than his neighbours. By early March the Inspectors had searched around 300 sites, no WMD had been found. Mexico and other countries asked Hans Blix how long he needed to be sure if Saddam had actually got any WMD. Three to four months said Blix.

Is it your view now, then looking back, that the British government had, for all practical purposes, signed up to regime change which of course was driving unambiguously the United States.

ROSS: I donï¿½t know that but I believe it.

WARE: You do believe it?

CARNE ROSS
First Secretary, UK Mission to the UN
1998-2002
Yes. If they really believed in disarmament as the goal, then inspections would have been allowed to continue. I think it's pretty clear, looking back, that the military timetable drove the diplomatic timetable.

ROBIN COOK MP
Foreign Secretary 1997-2001
Leader of the house 2001-2003
His problem was he could not be honest about that, either with the British people or Labour MPs, hence the stress on disarmament.

WARE: If he couldn't be honest about it, that suggests he was dishonest.

COOK: Oh I'd never accuse the Prime Minister of being deliberately untruthful. I think there was a lack of candour.

WARE: No.10 was now warned by Jack Straw that Britain was not going to win enough votes for a second resolution in the short time left to them by the Americans. He advised the Prime Minister to prepare to abandon the quest for one. On the 10th March, No.10's worst fears were confirmed. President Chirac had dramatically announced that France would veto a second resolution if it was put to the vote.

Dramatic reconstruction

CHIRAC: My position is that, regardless of the circumstances, France will vote no because she considers this evening that there are no grounds for waging war in order to achieve the goal we have set

ourselves to disarm Iraq.

WARE: In his interview the French President mentioned "this evening" no fewer than four times to stress he didn't think war was justified as of that moment. But Mr Blair seized on only the first half of President Chirac's statement.

March 2003

BLAIR: If France or any other country is simply going to say we will veto no matter what.. well, that's obviously a very difficult position.

WARE: In fact, President Chirac had not said "no matter what" as if forever. He had stressed that if the Iraqis ceased to cooperate with the weapons inspectors, war would become inevitable, it just wasn't today. But in No.10's briefing to the press, neither they nor Mr Blair mentioned this important qualification. Watching these extraordinary events from close quarters in No.10 was Sir Stephen Wall, the Prime Minister's European Affairs Adviser.

Do you think Downing Street wilfully misconstrued what the French President had said?

Sir STEPHEN WALL
Prime Minister's European Affairs Adviser
2000-2004
I think that theyï¿½ I wouldn't say wilfully misconstrued in this sense but I think that Tony Blair and other members of the government were convinced that there were no circumstances in which France was prepared to support action.

WARE: Ever?

WALL: Ever. But if you mean did they take Chirac's words and take them out of the total context in which they were made ï¿½ undoubtedly.

21 February 2003

WARE: The Sun newspaper had already run banner headlines softening up President Chirac. "Squirm, Worm ï¿½ Wrigley Wobbler Chirac.

26 February 2003
Stop Squirming."

WARE: Now the Sun accused the French President of being:

Thursday, March 6, 2003
"A cheap tart who puts price before principle".

WARE: We've been told that in No.10 the Prime Minister and Alistair Campbell expressed approval of the Sun's coverage.

12 March 2003
"Jacques Chirac struck the streets of shame. Like all who ply the

trade of the harlot, they will catch something very nasty."

WARE: Do you think actually that Downing Street quite deliberately were playing the French Card?

WALL: I think there's no doubt that the French card was deliberately played. I meanï¿½

WARE: Blame it on the French.

WALL: Yeah, I mean death to the French is always a pretty good cry in British politics when you're in a tight corner, knocking the French is not a.. you know.. it's not a bad policy, and this was a tight corner. I mean here was a government that was fighting for its life.

WARE: Ministerial resignations were threatened. The country and MPs divided. The French Embassy complained to the Foreign Office that No.10 had deployed Soviet style disinformation. We understand, the Foreign Office's Political Director responded, what your President said was such a gift. But it was not the French who finally killed off Mr Blair's hopes of winning a second resolution.

ADOLFO AGUILAR ZINSER
Mexican Ambassador to the UN
2002-2003
The British were asking the Americans give us a little more time. It was not France, it was the United States who did not want to give us more time. They did not want to give Saddam Hussein, the United Nations, or the Security Council, or the British for that matter, more time.

Admiral VERN CLARK
US Chief of Naval Operations
I know this, I was just given the order last week to get another 15 ships underway and they're loaded with marines ï¿½ you all figure.

WARE: With the American forces ready to go, Mr Blair's commitment to President Bush had brought him to a legal crossroads. Foreign Office lawyers still believed that war without the explicit authority of the Security Council voting for a second resolution would be illegal. But help was at hand. This is Lord Goldsmith. As Attorney General he's the government's most senior legal advisor, he's also been described as a loyal Labour Party foot soldier.

Dramatic Reconstruction

Lord Goldsmith was certainly leaving it late to come to a settled view about such a critical issue as whether war with Iraq would be legal.

On the 11th February the Attorney General travelled here to Washington to hear from US government lawyers why they thought going to war without a second resolution was lawful. We've been told by forces in a position to know that until this point Lord Goldsmith was by no means convinced it would be lawful. But after spending a day in

Washington he is said to have left with his spine stiffened at least a little.

Two weeks later the Attorney General met with the Prime Minister's inner policy circle at No.10. A week after that he delivered his written advice to the Prime Minister. The advice ran to 13 pages.

Dramatic reconstruction

GOLDSMITH: Minute to Prime Minister dated Friday 7th March 2003, headedï¿½.

WARE: We've been told that Lord Goldsmith advised it would be preferable to have a second resolution but that he could make a case for going to war without one. On the other hand, there were risks.

PHILIPPE SANDS QC
Professor of International Law
University College London
The risks indicated in particular the possibility of legal proceedings against the United Kingdom. My understanding is that the United Kingdom took steps to protect itself against such proceedings for example by beginning the task of preparing legal advisers to assist in the defence of the case. So it was a very equivocal advice. It was a balanced advice.

WARE: The Chief of Defence Staff was not happy with this balanced advice. Admiral Boyce needed to be sure his troops were not at risk of fighting an illegal war. The Admiral required a crystal clear answer from the Attorney general.

Rear Admiral NICH WILKINSON
Secretary, D-Notice Committee
1999-2004
The Chief of Defence Staff was concerned about having a very clear-cut tick in the box that this war was going to be legal. I heard that what he saw then.. the chief saw then was not the clear-cut tick in the box we were looking for.

WARE: A quarter of the British Army was now battle ready on the Arabian peninsular.

General Sir MIKE JACKSON
Chief of the General Staff
There are I think two or three ships yet to come in. I would have thought 4 or 5 days would pretty much complete the whole logistic piece. But, even if it were today, it's good to go.

WARE: Fortunately for the Prime Minister the Attorney General's view had continued its evolution to the point of complete clarity. All the caveats had now been stripped out of it.

Dramatic reconstruction

On 13th March Lord Goldsmith informed No.10 it was his clear view that Britain could go to war without a second resolution. So what had changed over the previous month to stiffen his spine still further?

ROBIN COOK MP
Foreign Secretary 1997-2001
Leader of the House 2001-2003
Nobody can avoid the obvious fact that the view chanted when we found that we couldn't get the second resolution, and I am rather disturbed that there were discussions with the Attorney General at Downing Street. What is important is that the Attorney General should be semidetached, should provide an independent legal view, should not himself become drawn in to the debate and negotiations within government as to what the appropriate course of action is, and I think on this occasion the Chinese Walls got broken down in a way that's damaging for the authority of the post and it needs to be rebuilt.

WARE: The Attorney General has told us he doesn't wish to discuss how he came to his view that the war was legal other than to say it was his own view, genuine and independent.

17 March

However, what has astonished so many senior civil servants is that the Cabinet only had the assurance from the Attorney General that war would be legal just three days before the bombing started.

Reconstruction based on Clare Short's account

BLAIR: Morning everyone. Right, can I ask the Attorney General to set out the legal position on the use of force.

GOLDSMITH: Authority to use force against Iraq exists from the combined effect of resolution 678, 687 and 1441. All of these resolutions were adopted under Chapter 7 at the UN Charter which allowedï¿½

CLARE SHORT: We can all read.

GOLDSMITH: ï¿½ which allowedï¿½

WARE: The International Development Secretary Clare Short tried to start a discussion about why the Attorney General's opinion was so late and whether he had any doubts about the legality of Britain going to war.

CLARE SHORT: No need to read it out loud.

WARE: But she says the Cabinet was impatient and they were happy to let Lord Goldsmith stick to his prepared text which was just one page, not the earlier 13 pages of advice with caveats and qualifications he'd sent to the Prime Minister. So the Cabinet was never told Mr Blair risked being brought before an international tribunal. To this day No.10 refuses to disclose the Attorney General's legal advice about the risks of going to war without a second resolution.

Sir STEPHEN WALL
Prime Minister's European Affairs Adviser
2000-2004
We searched the legal argument to breaking point in my view, and the fact that we didn't have that authority I think does set a dangerous precedent. I regret that I didn't speak my mind to Tony Blair on it. I think that at the end of the day going to war is about the most serious thing you can do in international... It is the most serious thing you can do in international affairs, and if you're going to put people's lives at risk, your own people apart from the civilians in the country where you're attacking, it does have to be the last resort and you do actually need some international authority to do it.

NBC
SHOWDOWN
with Saddam
ï¿½for standing by George Bush Tony Blair, Prime Minister of Great Britain, is in the fight of his lifeï¿½

ï¿½ to talk about the President's strongest ally in one Prime Minister Tony Blair. He's asking British law makers to support a war against Iraq. A vote expected in the next few hours. Blair says that the Iraq crisis will determine the shape of international politics.

WARE: The Prime Minister had promised the fullest possible debate in Parliament.

18 March 2003

BLAIR: Mr deputy speaker I beg to move the motion standing on the order paper in my name and those of myï¿½

WARE: Mr Blair told MPs that but for France's threat to veto the second resolution, Britain might have won a majority in the Security Council for invasion.

BLAIR: Last Monday we were getting very close with it. We very nearly had the majority agreementï¿½

WARE: But according to some of the diplomats involved in the actual negotiations, this was not true.

The statement from Mr Blair, and it's one of several in this vein, quotes: "We very nearly had a majority agreement" that doesn'tï¿½

ADOLFO AGUILAR ZINSER
Mexican Ambassador to the UN
No, we were never close to have a majority win, never.

WARE: We very nearly achieved agreement he said. What about that one?

ZINSER: We were never close to that. Not that we meant that will have satisfied the Americans.

WARE: The Prime Minister insisted that in going to war, Britain would be upholding the authority of the UN to ensure that Iraq complied with UN disarmament resolutions.

BLAIR: ï¿½ capacity, I'm afraid, to pass firm resolutionsï¿½.

HANS BLIX
Executive Chairman UNMOVIC
2000-2003
I think that's an absurdity that here a minority of the council goes to war to uphold the authority of a majority that is against it.

18 March 2003

BLAIR: We are asked now, seriously, to accept that in the last few years, contrary to all history, contrary to all intelligence, he decided unilaterally to destroy these weapons. I say such a claim is palpably absurd.

MEMBERS: Here here.

WARE: Was it palpably absurd?

BLIX: No, it was not, and the inspectors had not really asserted that these things existed. They had calculated material balances and I said here lots of things unaccounted for, and it wasn't absurd that they had destroyed it.

WARE: The Prime Minister won a large majority, but the country at large was still split right down the middle as two years ago tonight he took Britain to war.

20 March 2003

BLAIR: So our choice is clear. Back down and leave Saddam hugely strengthened, or proceed to disarm him by force. Retreat might give us a moment of respite, but years of repentance at our weakness would I believe follow.

[Scenes of war aftermath]

WARE: The search for weapons of mass destruction has been abandoned. No WMD has been found. About half of MI6's main sources that were used to build up the Iraq dossier have been withdrawn as unreliable. No.10 has told Panorama the Prime Minister has nothing to add to the facts and findings of the four inquiries that have already been held. But there is one issue that none of these inquiries has focused on, the evolution of Mr Blair's Iraq policy, what he said in public, what he knew in private and whether he can reconcile the two.

If you want to comment on tonight's programme you can visit our website at www.bbc.co.uk/panorama where we'll also be putting some of the background to tonight's programme.

I would like to know the frequencies and times of operation of Latin &
Jazz music shortwave stations that can be picked up from the UK ?

Many thanks

Merlin

So how many Christians have you seen lately riot and murder over
something so trivial?

Thank you Pete. I know you're a real standup guy. This world needs more people like you. You're friendly, kind, logical and willing to go out of your way for others. Plus you're optimistic and made me feel better. So, if I can ever do you a favor, you know you have a friend in Florida.

Thank you
Lucky

> And when it happens to you, I hope you feel the same way.

I have been outbid a number of times, I figure out what the max I will
pay for an item and that's it, if I get outbid, well that's life and
that's how an auction works. I deal with it an move on, not whine and
cry about how it is somehow unfair.
>

In other words, you want it fair only for you. Again, it is the seller's
auction, they can do what they damn well please and they don't have to
consult you. Deal with it.
>

If you had been dealing with a robot, then the no shipping out of the US
would have stuck, you are dealing with humans that can and have the
right to change their mind and make their own decisions, all without
your consent by the way.

I'm not sure how easy it is to pick up this from UK, but every weekday
the BBC broadcasts an hour of great jazz at 0001 UTC on 6110 kHz.

The discussion is in Spanish but the music is universal.

I can believe this. However, in that case I wonder whether the HF-150E has anything over a standard HF-150 attached to a good quality highpass filter. The 150 I use had very few problems with intermodulation even here in the NYC metropolitan area. What few problems it did have were cleared up completely by a Kiwa highpass filter. I already had the filter lying around, but even new it would cost a lot less than a Europa...and there are some high quality highpass filters out there that cost less than Kiwa's.

On the other hand, you might just want a Europa because it's a Europa...I can understand that too.

Steve

It is worthwhile to change the audio coupling caps.

Pete

I haven't ordered anyhting yet, due to house and auto
insurance falling due, I have limited non essenital
spending until June. And the first thing I plan to buy
is a 455.1 500Hz CW filter....

I have read and re-read the Kiwa article many times in in the
last few months. I had read about the Si to IN diode swap for
the 8ve filters several years ago and had the good luck to be
given 24 HP PIN diodes by a grad student. I had forgoten that
I had even made the mod unitl after I purchased another R2000
from Frank C. And I was puzzled by the greater distortion
in the AM band when listening to stations withen a few KHz of a
power house. I initially worte it off as a result of Frank's removal
of the LF/MW 1-dB attenuator. It wasn't until I opened my R2000
for a more complete logic IC bypass mod that I saw the HP PINs
and remembered that I had changed to them.

A mind is a terrible thing to misplace

Any Idea why Kiwa spec'ed PINs for one switch and Shottkys for the
other?

And any links to improved "low distortion" diode detectors,

And any links to any "simple" synch detectors?

We will sadly never have any president of the calibar and of the values as our original founding fathers, all of which would roll over in there grave if they saw the state of the country and it's international fiddling. The only ones killing America are it's people who forgot the real American values, the original American values which has been replaced by neocons and left-wing liberal mindsets.

> . . . . .

You can leave out all mention of Baluns and Coax from your description of any kind of antenna. Baluns and Coax are not part of an antenna, they are part of the transmission line. Furthermore, neither a Balun nor Coax are required as part of any antenna or transmission line system, they are both options that provide either convenience or safety or both.

You may also omit the inclusion of a ground wire as being any part of a dipole antenna. An earth ground is never part of either the antenna or

feedline system of a center-fed dipole antenna.

On the "random" or "long wire" terms, it has always been kind of laughable to split hairs about how long a wire is before it becomes a "long wire". Using the IEEE definition that states 2WL long for instance: for 29 mHz reception, a random piece of wire length suddenly becomes a 2WL "long wire' when its 66 feet long. Then, when we cut wire for 1/4 WL that generally fulfills a good receive and transmit capability for a given frequency, it sounds ignorant to call that a "random wire", which of course it is not. Those two terms may always cause confusion in the field.

Best regards,

Jack

Sure, but is there really much difference between a dampning factor of 1000
or 100 or whatever? What if we could arrange an infinite dampning factor?

An infinite damping factor should control the voice coil as much as it can
be controlled. Imagine, for the purpose of illustration, a speaker with
it's terminals dead zero ohms shorted. Can the voice coil be moved without
any electrical input? Yep. Back emf (or current) or not, it can be moved
pretty easily. It can be moved at any frequency. Sure, with the speaker
shorted, the voice coil will try to act as an electrical brake, but it's a
pretty lousy brake. I doubt an infinitely damped speaker would control
unwanted motion any more completely than a shorted mechanical meter
movement.

I imagine the voice coil would be a much better electrical brake if it
didn't have any electrical resistance. But it does have electrical
resistance. The majority of most speaker's impedance is electrical
resistance.

So, as I see it, voice coil resistance is the limiting factor in all these
wire size/dampning factor considerations.

I can think of one way to get around the effects wire size has on dampning
factor. Just run another pair of thin sensor wires from the speaker
terminals back to the amplifiers feedback network. Voice coil resistance
effects could be greatly reduced if somebody would wind a sense coil on the
voice coil form and run sensor wires back to the amp.

I'm not convinced such extraordinary damping factor designs would be worth
the effort. After all, tube amps have a comparatively crummy dampning
factor, yet still can sound pretty good.

Radio Aus. is sure coming in good, compared to a couple of days ago.
Around 3:10 UTC it was S5-S7 and zero background noise. It was strange
tuning it in, as I turned on the radio and thought 15 MHz was dead.
No noise, just signals. RNZI was there, but I was setting up to
tape RA so I didn't bother with a signal check.

Did you get the interface board without the cable?
It is *very* hard to find a single cable.
This round 10-pole connector on the NRD-525 is *very* special and I did
not find it or the counterpart anywhere.
Best idea is to change the connector on the 525 to a DB-9 connector for
using a standard serial port cable.

I went lucky, the seller of the interface gave the cable with it back
then... :-)

Adding a DB-9 connector is the common (and simple) solution for this
problem.

Creating another unique solution is not much recommended.
A 5-pin DIN-plug should do the trick as there are not more wires
connected in a serial cable.
It is much more easy to solder and available on every corner.
Just in case the new plug absolutely should fit in the hole.

I look at it this way; we have rioting in cities that win sporting titles (Super Bowl, World Series, etc.). If people in the US and Europe riot over something as mundane as sports, why is it an impossible leap to think that there will be people who go ballistic when a report is issued about something a bit more important to them, like The Meaning of the Glorious Koran, being desecrated?? Why is it easy to ascribe "they're nutjobs" to one group, like the people who went bananas over art depictions of a cross dipped in urine, and define another group as "oppressed people of the expansionist US Empire" when a false report surfaces on a supposedly respectable newsweekly??

Don't ascribe something like rioting to simply the US being the agressor, when you don't understand what the report really means to those people. Try and explain rationalism to those people who wanted to "reconfigure" Steve Bartman because they blamed him for the Cubs losing the NLCS a couple of years ago. Or the people who killed the Colombian soccer/futbol star after he inadvertantly knocked the ball in the goal against the US in one of the World Cups in the 90's.

Posted on Wednesday, May 18 @ 09:16:01 EDT

George Galloway MP (UK)

"Senator, I am not now, nor have I ever been, an oil trader.
And neither has anyone on my behalf. I have never seen a
barrel of oil, owned one, bought one, sold one - and neither
has anyone on my behalf.

Now I know that standards have slipped in the last few years
in Washington, but for a lawyer you are remarkably cavalier
with any idea of justice. I am here today but last week you
already found me guilty. You traduced my name around the
world without ever having asked me a single question, without
ever having contacted me, without ever written to me or telephoned
me, without any attempt to contact me whatsoever. And you call that
justice.

I told the world that Iraq, contrary to your claims
did not have weapons of mass destruction.

I told the world, contrary to your claims
that Iraq had no connection to al-Qaeda.

I told the world, contrary to your claims,
that Iraq had no connection to the atrocity
on 9/11/2001.

I told the world, contrary to your claims, that the
Iraqi people would resist a British and American
invasion of their country and that the fall of
Baghdad would not be the beginning of the
end, but merely the end of the beginning.

Senator, in everything I said about Iraq, I turned
out to be right and you turned out to be wrong and

100,000 people paid with their lives; 1600 of them
American soldiers sent to their deaths on a pack
of lies; 15,000 of them wounded, many of them
disabled forever, on a pack of lies.

Now I want to deal with the pages that relate to me in
this dossier and I want to point out areas where there
are - let's be charitable and say errors. Then I want to
put this in the context where I believe it ought to be.
On the very first page of your document about me
you assert that I have had 'many meetings' with
Saddam Hussein. This is false.

I have had two meetings with Saddam Hussein, once
in 1994 and once in August of 2002. By no stretch
of the English language can that be described as
"many meetings" with Saddam Hussein.

As a matter of fact, I have met Saddam Hussein exactly
the same number of times as Donald Rumsfeld met him.

The difference is Donald Rumsfeld met him to sell him guns
and to give him maps the better to target those guns. I met
him to try and bring about an end to sanctions, suffering and
war, and on the second of the two occasions, I met him to
try and persuade him to let Dr Hans Blix and the United
Nations weapons inspectors back into the country - a rather
better use of two meetings with Saddam Hussein than your
own Secretary of State for Defense made of his.

I was an opponent of Saddam Hussein when British and
Americans governments and businessmen were selling
him guns and gas. I used to demonstrate outside the Iraqi
embassy when British and American officials were going
in and doing commerce.

You will see from the official parliamentary record, Hansard,
from the 15th March 1990 onwards, voluminous evidence
that I have a rather better record of opposition to Saddam
Hussein than you do and than any other member of the
British or American governments do.

Now you say in this document, you quote a source, you
have the gall to quote a source, without ever having asked
me whether the allegation from the source is true, that I
am 'the owner of a company which has made substantial
profits from trading in Iraqi oil'.

Senator, I do not own any companies, beyond a small
company whose entire purpose, whose sole purpose,
is to receive the income from my journalistic earnings from
my employer, Associated Newspapers, in London.
I do not own a company that's been trading in Iraqi oil.

And you have no business to carry a quotation, utterly unsubstantiated and false, implying otherwise.

Now you have nothing on me, Senator, except my name on lists of names from Iraq, many of which have been drawn up after the installation of your puppet government in Baghdad. If you had any of the letters against me that you had against Zhirinovsky, and even Pasqua, they would have been up there in your slideshow for the members of your committee today.

You have my name on lists provided to you by the Duelfer inquiry, provided to him by the convicted bank robber, and fraudster and conman Ahmed Chalabi who many people to their credit in your country now realize played a decisive role in leading your country into the disaster in Iraq.

There were 270 names on that list originally. That's somehow been filleted down to the names you chose to deal with in this committee. Some of the names on that committee included the former secretary to his Holiness Pope John Paul II, the former head of the African National Congress Presidential office and many others who had one defining characteristic in common: they all stood against the policy of sanctions and war which you vociferously prosecuted and which has led us to this disaster.

You quote Mr Dahar Yassein Ramadan. Well, you have something on me, I've never met Mr Dahar Yassein Ramadan. Your sub-committee apparently has. But I do know that he's your prisoner, I believe he's in Abu Ghraib prison. I believe he is facing war crimes charges, punishable by death. In these circumstances, knowing what the world knows about how you treat prisoners in Abu Ghraib prison, in Bagram Airbase, in Guantanamo Bay, including I may say, British citizens being held in those places.

I'm not sure how much credibility anyone would put on anything you manage to get from a prisoner in those circumstances. But you quote 13 words from Dahar Yassein Ramadan whom I have never met. If he said what he said, then he is wrong.

"And if you had any evidence that I had ever engaged in any actual oil transaction, if you had any evidence that anybody ever gave me any money, it would be before the public and before this committee today because I agreed with your Mr Greenblatt [Mark Greenblatt, legal counsel on the committee].

Your Mr Greenblatt was absolutely correct. What counts is not the names on the paper, what counts is where's the money. Senator? Who paid me hundreds of thousands of dollars of money? The answer to that is nobody.

And if you had anybody who ever paid me a penny,
you would have produced them today.

Now you refer at length to a company names in these
documents as Aredio Petroleum. I say to you under
oath here today: I have never heard of this company, I have
never met anyone from this company. This company has
never paid a penny to me and I'll tell you something else:
I can assure you that Aredio Petroleum has never paid a
single penny to the Mariam Appeal Campaign. Not a thin
dime. I don't know who Aredio Petroleum are, but I
daresay if you were to ask them they would confirm
that they have never met me or ever paid me a penny.

Whilst I'm on that subject, who is this senior former regime
official that you spoke to yesterday? Don't you think
I have a right to know? Don't you think the Committee
and the public have a right to know who this senior former
regime official you were quoting against me interviewed yesterday actually
is?

Now, one of the most serious of the mistakes you have
made in this set of documents is, to be frank, such a schoolboy
howler as to make a fool of the efforts that you have made.
You assert on page 19, not once but twice, that the documents
that you are referring to cover a different period in time from
the documents covered by The Daily Telegraph which were a subject of a
libel action won by me in the High Court in England late last year.

You state that The Daily Telegraph article cited documents from 1992 and
1993 whilst you are dealing with documents dating from 2001. Senator, The
Daily Telegraph's documents date identically to the documents that you were
dealing with in your report here. None of The Daily Telegraph's documents
dealt with a period of 1992, 1993. I had never set foot in Iraq until late
in 1993 - never in my life. There could possibly be no documents relating
to Oil-for-Food matters in 1992, 1993, for the Oil-for-Food scheme did not
exist at that time.

And yet you've allocated a full section of this document to claiming that
your documents are from a different era to the Daily Telegraph documents
when the opposite is true. Your documents and the Daily Telegraph documents
deal with exactly the same period.

But perhaps you were confusing the Daily Telegraph action with the
Christian Science Monitor. The Christian Science Monitor did indeed publish
on its front pages a set of allegations against me very similar to the ones
that your committee have made. They did indeed rely on documents which
started in 1992, 1993. These documents were unmasked by the Christian
Science Monitor themselves as forgeries.

Now, the neo-con websites and newspapers in which you're such a hero,
senator, were all absolutely cock-a-hoop at the publication of the

Christian Science Monitor documents, they were all absolutely convinced of their authenticity. They were all absolutely convinced that these documents showed me receiving $10 million from the Saddam regime. And they were all lies.

In the same week as the Daily Telegraph published their documents against me, the Christian Science Monitor published theirs which turned out to be forgeries and the British newspaper, Mail on Sunday, purchased a third set of documents which also upon forensic examination turned out to be forgeries. So there's nothing fanciful about this. Nothing at all fanciful about it.

The existence of forged documents implicating me in commercial activities with the Iraqi regime is a proven fact. It's a proven fact that these forged documents existed and were being circulated amongst right-wing newspapers in Baghdad and around the world in the immediate aftermath of the fall of the Iraqi regime.

Now, Senator, I gave my heart and soul to oppose the policy that you promoted. I gave my political life's blood to try to stop the mass killing of Iraqis by the sanctions on Iraq which killed one million Iraqis, most of them children, most of them died before they even knew that they were Iraqis, but they died for no other reason other than that they were Iraqis with the misfortune to born at that time. I gave my heart and soul to stop you committing the disaster that you did commit in invading Iraq. And I told the world that your case for the war was a pack of lies.

I told the world that Iraq, contrary to your claims did not have weapons of mass destruction. I told the world, contrary to your claims, that Iraq had no connection to al-Qaeda. I told the world, contrary to your claims, that Iraq had no connection to the atrocity on 9/11 2001. I told the world, contrary to your claims, that the Iraqi people would resist a British and American invasion of their country and that the fall of Baghdad would not be the beginning of the end, but merely the end of the beginning.

Senator, in everything I said about Iraq, I turned out to be right and you turned out to be wrong and 100,000 people paid with their lives; 1600 of them American soldiers sent to their deaths on a pack of lies; 15,000 of them wounded, many of them disabled forever on a pack of lies.

If the world had listened to Kofi Annan, whose dismissal you demanded, if the world had listened to President Chirac who you want to paint as some kind of corrupt traitor, if the world had listened to me and the anti-war movement in Britain, we would not be in the disaster that we are in today. Senator, this is the mother of all smokescreens. You are trying to divert attention from the crimes that you supported, from the theft of billions of dollars of Iraq's wealth.

Have a look at the real Oil-for-Food scandal. Have a look at the 14 months you were in charge of Baghdad, the first 14 months when $8.8 billion of Iraq's wealth went missing on your watch. Have a look at Halliburton and other American corporations that stole not only Iraq's money, but the money

of the American taxpayer.

Have a look at the oil that you didn't even meter, that you were shipping out of the country and selling, the proceeds of which went who knows where? Have a look at the $800 million you gave to American military commanders to hand out around the country without even counting it or weighing it.

Have a look at the real scandal breaking in the newspapers today, revealed in the earlier testimony in this committee. That the biggest sanctions busters were not me or Russian politicians or French politicians. The real sanctions busters were your own companies with the connivance of your own Government."

-------- end ---------------

Put THAT in your pipe and shove it up your arse
sideways minus the K-Y you xian gop bushloving
douchebags !

> last few months. I had read about the Si to IN diode swap for
> the 8ve filters several years ago and had the good luck to be
> given 24 HP PIN diodes by a grad student.

1N5767S are good because of their minority carrier lifetime, although any diode that has at least a 1.5uSec lifetime would be ok.

I had forgoten that
> I had even made the mod unitl after I purchased another R2000
> from Frank C. And I was puzzled by the greater distortion
> in the AM band when listening to stations withen a few KHz of a

> A mind is a terrible thing to misplace
>
> Any Idea why Kiwa spec'ed PINs for one switch and Shottkys for the
> other?

I am not sure why he would do that.....Shottkys are good for mixer service, while PINs are good for RF switching.
>
> And any links to improved "low distortion" diode detectors,

You could bias the detector diode with a DC voltage; this would eliminate that .6V drop.
>
> And any links to any "simple" synch detectors?

I don't know if there is such a thing as a simple sync detector. I have done a couple of designs; one of them uses a Philips SA637 as a quasi-sync detector, similar to the "Synchro Phase" detector that the Drake R7 uses, while the other one is a PLL type of sync detector that uses an Analog

Devices AD607 Quadrature receiver subsystem.

Anytime, Lucky.....I've been there, done that, so I know how you feel. Best thing to do when these things happen is to just write them off. It was just one of those things.
It reminds me of an incident a couple of months ago. I was looking for another job, since my own job was winding down.
I sent out resumes to a few job recruiters. One of them, Goldstar Solutions, had a two jobs up in the northern suburbs of Chicago as RF Technicians. I thought "ok, why not", so I called up Goldstar to follow up on the positions. They told me that they would call me the next day.
They didn't, so I called them 3 days later. They explained that the client filled one of the positions but put a hiring freeze on the other. No big deal, at least not at the point in time.
Two weeks later, I e-mailed Goldstar Solutions, after which I received a phone call stating that one of the two people that the client hired decided to go back to Motorola? What? I thought there was a hiring freeze!
Anyway, we set up an interview for 3:30 that afternoon at the client's location. Two hours later, they e-mailed me to tell me that they were cancelling the interview and could I please come tomorrow? This was after I already took an early leave from work. Needless to say, I didn't follow up with them. I've since found another job, along with doing contract work.
These kinds of things happen in many avenues of life, not just eBaying around. You have people that just aren't used to telling the truth.
In your case, I think the the woman felt "in the corner" and didn't know how to handle it.

> Thank you Pete. I know you're a real standup guy. This world needs more
> people like you. You're friendly, kind, logical and willing to go out of

Ihave one of the Sonys a XR CA640X in one of my cars and a Philips
DC777 in another. The Sony works as good as the Philips except for not
having direct entry. Sony XR CA620X is similar. They are no longer in
poduction. Current one (not as many features) is Sony XR-F5100. It is
available at Jackys
http://www.jackys.com/product/Product.asp?prod_id=3547 or shortwave
store
http://www.jackys.com/product/Product.asp?prod_id=3547

I have a Philips DC777 in a Corvette with a CCrane am fm loading coil antenna and it gets decent reception in that car. I think a Sony might be a little bit less noise prone, but I have one of those ,Sony Explod XRCA640 (similar to Sony XRCA620, both replaced by less featured Sony XR-F5100) in a metal car with I believe an active antenna so I cannot really make a valid comparison. Sony works as well or better except for no direct entry.

consider the source (the competition).

besides, if this were really the case, you'd see some real changes at FNC.
so far, its the same thing they've had on there for 4 years and it works. no
fluff and no BS.

Some people like the loosely damped sound of tube amps, even if it is less accurate.

Your proposal for a Kelvin connection to a speaker isn't exactly marketable since the amplifiers would have to be designed with a sense input.

There are already motion feedback speakers, generally for woofers. Typically they use a piezo accelerometer to sense the motion, not a second coil.. Velodyne has done this for over 20 years.

I wouldn't mind infinite damping. Sounds like a good idea.

I suppose you could use the term untuned dipole, but I think most people would interpret the term incorrectly. Functionally, both are random lengths of wire.

In most cases, the ground connection is through some wire, which in itself is an antenna (not to mention an inductor). Since you can never make a decent connection to ground, I try to use antennas that don't require a good ground [Counterpoise grounds are the exception in that they are part of the antenna.]

Try Radio Havana Cuba. They broadcast a fair amount of Cuban jazz on
their North American Service from 0100-0700 UTC. I know this is the wee
hours of the morning UK time, but if you happen to be up, it's a good
listen for those interested in Latin jazz. I'm not sure if Cuba
broadcasts to Europe; you can check databases such as Eibi or try
searching for their website, I think it's radiohc.cu but I'm not sure.
Cuba has an extensive Spanish language service to the Latinoamericas
that also features lots of music.

Sounds like transmitter and/or feed problems. The fact that they're
denying the problem probably means that they don't have the wherewithal
to fix it, likely due to budget cuts. Shortsighted govts all over the
world are cutting SW budgets.

Unfortunately, I have to agree. The American magazine Newsweek has a feature this week in its US edition about George Washington, who would be outraged at the "entangling alliances with foreign powers" that we have gotten ourselves into. Washington was not brilliant by any means, but he knew how to lead warring factions and knock heads to get things done if need be. Washington didn't pander to anybody, a skill that's badly needed today. He would see us playing the role of the British in Iraq, and march down to the White House to knock some sense into the current George who's occupying that building. If we had those men around today, America would be great again. Jefferson would be urging the American public to rebel against Bush-literally, by taking up arms and forcibly removing him from power.

Yep, it was written by two Polish university students. I got it off
Tucows mainly because a) it is an online reader (I couldn't find any
other online readers at the time) and b) it was free. I don't think I
can change it, although I will check.

I've been wanting to do a PIN diode u/g for my DX-394's preselector bandswitching for a couple of years since reading the Kiwa article. But I wanted surface mount to directly replace the existing diodes. I think I have found them for the three SW bands - Infineon BAR64-03W PIN Diodes in a SOD-323 package with a typical charge carrier lifetime of 1.55us.
http://www.ortodoxism.ro/datasheets/infineon/1-bar64series.pdf (501 kb)
http://www.ortodoxism.ro/datasheets/siemens/Q62702-A1045.pdf (48kb)

Pete, do these look like a good alternative to the axial leaded 1N5767?

Still looking for something for the MW and LW bands in a dual diode SOT-343 package to replace the DA277's:
http://www.ortodoxism.ro/datasheets/rohm/da227.pdf (53kB)

73, Tom

This has been done to death, with no connection Hussein whatever. Bin Ladin even had a contract out on him, due to the non sectarian nature of Iraq. That country was the LEAST religiously radical of all the States in that region. That is why the US and it's corporations sold it so many chemicals and arms. Later on, Cheney and gang were circumventing the embargo in many creative ways. You know it, I know it.

and with that, I'll beg out of this exchange. These things have a habit of never ending.

I just love my new RF-2200. What reception!

Only problem is that the dial is quite a bit off - more than can be compensated for with the built-in calibrater. Does anyone have a recommendation for someone that can do a complete alignment on this radio? Thanks.

1696. Massacre in Uzbekistan

Newsgroup: rec.radio.shortwave
Date: 2005-05-20 02:47:08 UTC
From: running dogg <run@ning.dog>
Message-ID: <428d5089$1_1@spool9-west.superfeed.net>
Source record: 22426

For several days the lead story on the BBC's The World Today has been about the massacre in Andijan, Uzbekistan. Short version: thousands gathered in the center of town to protest the arrest of the town's major business leaders on terrorism charges; crowd got restless, soldiers fired on them. Anywhere from 300 to 1000 innocent civilians died, but we don't know for sure since the Uzbek govt has sealed off the area and has forbidden journalists from going there. Anecdotal reports tell of trucks filled with bodies, of school gyms piled high with bodies. Why is this important to Americans? The Uzbek govt is a strong ally of the US, and America has a big base in the country to supply our guys in Afghanistan. Is it just coincidence that coverage of all this in the US domestic media has been limited? Why does the Bushite US media want to protect the US public from the fact that we support a regime that has just murdered hundreds of its own people in the name of fighting terror? While Bush cruises towards an anti-American revolution in Uzbekistan that will severely hinder our ability to fight Al Qaeda, the American public is kept in the dark. Meanwhile, the Uzbeks are vowing revenge. Stay tuned...

If one has a dipole would it not be 'tuned' or 'resonant' on some frequency?

> shortwave recivers.

Here's what I found via google, and below a source for the connectors:
==========
Back in April, Mark Fine (mark.f...@cmbbs.com) posted information
about the remote control wiring for the DC777.

To recap his info, the remote control does its thing by closing a
switch between two out of the seven terminals on the remote control
socket. Mark listed the functions and the associated pins as follows:

Volume Up : pins 1&6 or 7&6
Volume Down : pins 1&5 or 7&5
Bank Up : pins 3&6
AST : pins 2&6
Mode : pins 2&5
Scan : pins 1&4 or 7&4
Switch AM-FM : pins 3&4

Mark's analysis was apparently based on his disection of the remote
control unit; he did not give pin number identification information at
the radio end. By experimentation, I have concluded that the pins
numbers relate to the radio end thusly:

```
---------------------------
| 7 6 4 2 | As you look at the back

----| | of the radio, this is
| 5 3 1 | the connector at
----------------------- the top right.
```

This would not be how Philips designated the pin numbers on the radio,
but it relates the numbering to the assignment above, which is
(presumably) how they were numbered on the remote control box.

Mark stated that "Mode" allows you to switch between radio and cassette operation. He did not indicate what "Bank Up" was. At least in AM/FM operation it sequentially goes thru the preset buttons.

Scan will go either up or down, depending on which scan button on the radio was last pushed.

The reason I looked into this so I could install a button on the dash board to do the Scan function. Between the itsy-bitsy size of the buttons on the radio and the low radio mounting position on my car, it was difficult to scan. I have solved the problem with a button on the dash near the steering wheel.

I tried several audio stores looking for a connector to mate with the radio. No one had such a beast. One place suggested that it looked like the connectors used on Volkswagen radios. The next place gave me some slip-on terminals that worked well with the radio's connector terminals. Since I was only going to use two wires to do the job, I went with the slip-ons.

I hope this information is helpful to the DC777 user community.

--
Al Friedrich Raleigh, NC, USA

==========

For the connector, I went first to a hi-end car radio shop and the fellow hemmed and hawed and said it looked like a cd connector, for european radios that had a remote cd deck option. He dissappeared, and came back in 5 minutes with the right item. $85 please. I said I'd look a little further. Went to the guy who wrecks old vw's. He dug a dirty one out of the toolbox and said it wasn't worth anything to him, so free.

One simple answer; If we don't the Communists will. It is called
real-politicks.
Witness the Chinese Communists support of regimes in Sudan, Iraq, Iran,
N.Korea, Burma, to name just a few.
Read some history, pull out a map and stick some red pins in it and a
pattern will emerge.

In a region of strategic resource importance right next door to two of the
worlds most pro-Communist regimes it is unfortunately a fact of
real-politicks. Read some history of Marx, Lenin and Mao and the Chi-Comms
desire to choke off access to vital resources to the west.

It isn't conspiracy theory it is fact.

Hi,

Thanks to all that replied. The original connector was soldered by Japanese girls with fingers much smaller than mine.

I may have to change the connection as suggested but still hope for a cable lying around somewhere.

duncan

And Newsweek and CBS they take responsibility for them. CBS fired
Rather and two other senior people. Newsweek retracted the story.

Acts of koran desecration my US soldiers at Gitmo have been reported
in 002 and 2003 in an FBI email, a Pentagon report, WashPost, Maimi
Hearld, BBC, and an International Red Cross report. Newsweek spoke the
truth.

Whan has Fox News ever corrected a atory or taken responisbility for
anything?

lying around somewhere.

duncan

For years I have been planning to develope a spider
monkey to work on all the small electronics I have to
service. Small hands to be able to work with small
parts, and small body to get inside small spaces.
At 6'2" and 225lbs I just can't squeeze into some
areas.

Several yars ago a friend needed to replace a SMD
transistor, he has the sakes from the swine flu shot,
so he trained his 8 year old daughter to solder and she
put the part in with no trouble.

Maybe you can find a woman or child with the small hands
and skill do the work. At work we have a woman engineer
and she gets "tasked" (stuck) with installing all the micro
connectors.

And a friend has a pardoy song about a looking for a "doctor
with small hands", sung to slow hand. Think of protrate exam.

"Bring 'em on..."
http://www.geocities.com/ywaciv/p2og.html

In August 2002, the first public hints of a new U.S. secret counterintelligence group -- the Proactive Preemptive Operations Group (P2OG) -- emerged from a report of the Defense Science Board (DSB), a Pentagon advisory group, and found its way into daylight.

full article
http://www.disinfopedia.org/wiki.phtml?title=P2OG

According to a classified document prepared for Rumsfeld by his Defense Science Board, the new organization--the "Proactive, Preemptive Operations Group (P2OG)"--will carry out secret missions designed to "stimulate reactions" among terrorist groups, provoking them into committing violent acts which would then expose them to "counterattack" by U.S. forces.

full article
http://www.counterpunch.org/floyd1101.html

Among other things, this body would launch secret operations aimed at 'stimulating reactions' among terrorists and states possessing weapons of mass destruction -- that is, for instance, prodding terrorist cells into action and exposing themselves to 'quick-response' attacks by U.S. forces. Such tactics would hold 'states/sub-state actors accountable' and 'signal to harboring states that their sovereignty will be at risk,'

full article
http://www.globalresearch.ca/articles/ARK211A.html

Beware provocations

The Los Angeles Times has revealed the creation of an organisation by US Secretary of Defence Donald Rumsfeld called the "Proactive, Preemptive Operations Group" Its purpose is to "bring together CIA and military covert action, information warfare, intelligence, and cover and deception". The PPOG's role is to manufacture the terrorism that is to be combatted.

Faced with the massive opposition to their war plans Bush and his team may again be planning some terrorist act to provoke massive revulsion and whip a sceptical and reluctant world into supporting war against Iraq and other targets.

Chris Floyd of CounterPunch writes, "The US government is planning to use 'cover and deception' and secret military operations to provoke murderous terrorist attacks on innocent people. Such operations are not new for the United States authorities.

"Operations Northwoods" was such a scheme. It was a plan put forward by America's top military brass in 1963 to justify the invasion of Cuba. It called for a phony terrorist campaign complete with bombings, hijackings, plane crashes and dead Americans to provide justification for an invasion of Cuba. President Kennedy rejected the plan - and was assassinated a few months later.

Another similar provocation was a reported attack by Vietnamese naval craft on the US navy in the Tonkin Gulf. It was used by President Johnson to escalate the invasion of Vietnam by American forces. It was subsequently revealed that the incident never took place - but that was after hundreds of thousands of soldiers and civilians were killed in the Vietnam War.

Many believe that the events of September 11 were another such provocation using a terrorist organisation infiltrated by the CIA and under its effective control. There is no other logical explanation for the complete failure of the interception of the hijacked planes that crashed into the World Trade Centre and the Pentagon. September 11 has been used by Bush, Rumsfeld, Cheney and others to launch the phony "war on terrorism".

The "war on terrorism" requires a steady stream of alleged "terrorist" actions and who better to arrange them than the CIA and Rumsfeld's "Proactive, Preemptive Operations Group" or other "special" forces.

> Unfortunately, I have to agree. The American magazine Newsweek has a
> feature this week in its US edition about George Washington, who would
> be outraged at the "entangling alliances with foreign powers" that we
> have gotten ourselves into.
Entangling alliances my ass. Who asked the US to go to Iraq or don't you
count that one? Some nations were bullied into that one. When you make a
state do something, or else, you can call it more than a few things but
"alliance" isn't one of them. Still other nations were coerced into
promising they would never hand any American over to the ICC. They only did
that after Bush pulled out of the court and couldn't get nations to enter
into private treaties that would assure the US this or that nation would
fork any American over to the court. On more than a few occasions, the US
seems to think they should get special treatment, as a superpower. They
wouldn't have a clue about superpowers in 1776. But they certainly
understood the British Empire. It was their bullying and overall attitude
that caused the American Revolution.
You have filibusters because the Bush White House wants to ram through
nominations that will see the religious fundamentalists have their way, who
the hell cares about the separation of church and state. Which is pretty
bizarre given the fact that those Mayflower passengers fled because the
state had it's nose in their religion. Now Bush wants to get religion back
into prominence in state affairs.
If Washington would be doing anything, he'd be rolling his grave about what
Bush is doing to America. Then again, he probably has been doing that
already. It's a safe bet that the right to bear arms didn't mean yahoos
could equip themselves with the sort of firearms Americans have been getting
their hands on.
Washington was not brilliant by any means,
> but he knew how to lead warring factions and knock heads to get things

> done if need be. Washington didn't pander to anybody, a skill that's
> badly needed today.
Uh huh. Gimme a break. The US isn't pandering to anybody, they're too busy bullying and acting as the self appointed police for the world.

>He would see the us playing the role of the British in
> Iraq, and march down to the White House to knock some sense into the
> current George who's occupying that building. If we had those men around
> today, America would be great again. Jefferson would be urging the
> American public to rebel against Bush-literally, by taking up arms and
> forcibly removing him from power.
Instead he was re-elected, no iffy parts to his getting his second term, except for the way Bush's fanatics m,ade sure John Kerry never got elected, all that Swift Boats crap that came out of Texas. But you're right, Washington would probably try to knocke sense into GWBush. What good would it do though? America took him back, and he's been even more in your face about ramming his agenda in everyones face. Under him, America is now like the Empire Washington sought to get out of.
It's more than a little ironic too. Kerry is a Bostonian. I'm not even American but I got the sense of history and the American Revolution that Boston exudes. Instead of that, America got a man who got out of going to Vietnam and apparently even fulfilling National Guard duty. I don't think Washington would ever have asked citizens to do something he was unwilling to do, go to war and maybe even give his life. Then there's that whole myth about George Washington's truthfullness and the chopping down of a cherry tree. It's a myth but it's not the kind of myth anyone can expect to see grow around Bush.

> >

A practical article about this is:
Tom Thompson W0IVJ, Exploring Intermodulation Distortion in RF
Switching and
Tuning Diodes, QST December 1994, pp 25-27

His tests demonstrate that PIN diodes intended for RF switching are superior to PN switching diodes, especially at low bias. Surprisingly, the common 1N4007 1A rectifier which has a PIN structure equals or outperforms the MPN3700 and BAR17 RF PIN diodes for intermod at 5-10mA bias but its reverse bias isolation would require two of them in series to match these others.

The 1N4153 PN diode he tested had excellent isolation but lousy intermod, great for turning something off but poor when turned on! The author measured a 10-12 dB improvement just by raising the forward bias from 5mA to 10 mA.

What was especially revealing in this article was the testing of a varactor diode as the capacitor in a tuned preselector circuit contrasted to a fixed capacitor switched by a PIN diode. The author concluded that "using tuning diodes to tune high impedance circuits in the presence of strong signals is not a good idea". I'll have to go back to the library because a footnote to this sentence was that the same issue of QST had an article by Ulrich Rohde, the highly respected communications engineer, on a diode-tuned filter designed to minimise IMD.

Tom

Why did they retract? Even more important is WHY did a bunch of 'tards decide
that they had to go on a rampage?

Take those meds...

This editorial cartoon the week prior had something to to with it. If you anything about Islam you know
that being described as a dog is a major insult..

http://images.washtimes.com/photos/full/20050506-010309-5093.jpg

The Wash Times apologised for it a couple days later.

http://washingtontimes.com/world/20050509-100608-1906r.htm

Koran desecration has been in the news since 2002.

Gen. Abizaid (Chairman JCS) is on record as saying that the riots have
nothing to do with the Newsweek article based on a report from the
general in charge of Afghanistan in a report submitted since the May 9
publication.

>If one has a dipole would it not be 'tuned' or 'resonant' on some frequency?

Resonance just means that it's operating at a point where the inductive
and capacitive reactances are equal. A non-resonant dipole is still
picking up the signal, it just presents it as an impedance that is
mismatched to the transmission line (or receiver).

Probably either the jack itself is bad, or has a broken solder joint on the
circuit board.

Aside from the propagation issues, the usual antenna for satellite work is highly directional. Antenna size is proportional to wavelength and SW wavelengths are a hundred times or so bigger than the usual satellite wavelength.

That was something I was wondering about, do satelite signals ever transmit on shortwave frequencies. (I should think they use microwave)

I couldn't hear a SINGLE station last night except the usual religious crud. But, I heard a lot of chirps and signals that were rythmic in nature (natural noise never fits a pattern does it?)

Most useful audio checker is a pair of headphones wired to a probe with
a 0.01yF in series on one wire and a croc clip on the other. You can
poke around looking for audio to your heart's content. Just wire up a
phone jack to plug into to avoid tieing up your phones.

Source record: 22333

Thanks for sharing your advice. You are exactly right that there will be aliasing if I digitize the RF directly. I'll actually be running it through a system of bandpass and lowpass filters, amplifiers, and a programmable attenuator. This system expects a maximum input of 20 dBm. That's why I think I'll need to boost the signal out of the antenna.

My customers typically use a multicoupler between the filters and the antenna, but I don't have one. I need some sort of pre-amp, but I don't know how much gain I should get to as close to 20 dBm as possible without going over ("The Price Is Right" rules).

How much gain should I get in an amplifier? 20 dB, 40 dB, 60 dB? I know it's highly dependent on my RF environment, but I need to make some assumptions to at least get close.

BTW, what's the right way to measure the signal level produced by an antenna?

THANKS!
John

Man I wish the R2000 RF deck was easier to get to, I have a boatload,
OK at least 100 1N4007. When a development lab moved from from
Lexington I "inheireted" the parts stashes of several friends who
moved out of the area. This is so tempting it is frightening......

Thanks for something to think about.

Terry

1754. Antenna input Z test putoff a week or two.

I had planed on testing the antenna input imdedence
on several SW receivers this weekend, but a friend
has a faily emergency and mywife and I get to babysit
all week end.

Nice family and nice kids, my wife will help the kids,
a set of twin sisters, with a quilt on an old pumper
sewing machine.

No RFI!!!!!!!!!!!!

And I will while the day away with some antenna
and feedline experiments.

Thye live "out in the boonies", so it promises to be a
good radio weekend.

I hope eveyone has a good weekend.

Terry

I'll suggest as has been mentioned: open up the radio and inspect the
headphone jack first, look at the contacts and make sure there is
proper fit then check the connections to the board. You may be able
to solve the problem with no test equipment and no schematic.

THE MOST IMPORTANT QUESTION OF YOUR LIFE

This is the most important question of your life.

The question is: Are you saved?

It is not a question of how good you are, nor if you are a church member, but are you saved?

Are you sure you will go to Heaven when you die?

The reason some people don't know for sure if they are going to Heaven when they die is because they just don't know.

The good news is that you can know for sure that you are going to Heaven.

The Holy Bible describes Heaven as a beautiful place with no death, sorrow, sickness or pain.

God tells us in the Holy Bible how simple it is to be saved so that we can live forever with Him in Heaven.

"For if you confess with your mouth Jesus is Lord and believe in your heart that God raised Him from the dead, you will be saved." (Romans 10:9)

Over 2000 years ago God came from Heaven to earth in the person of Jesus Christ to shed His blood and die on a cross to pay our sin debt in full.

Jesus Christ was born in Israel supernaturally to a virgin Jewish woman named Mary and lived a sinless life for thirty-three years.

At the age of thirty-three Jesus was scourged and had a crown of thorns pressed onto His head then Jesus was crucified.

Three days after Jesus died on a cross and was placed in a grave He rose from the dead as He said would happen before He died.

If someone tells you that they are going to die and then three days later come back to life and it actually happens then this person must be the real deal.

Jesus Christ is the only person that ever lived a perfect sinless life.

This is why Jesus is able to cover our sins(misdeeds) with His own blood because Jesus is sinless.

The Holy Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you would like God to forgive you of your past, present and future sins just ask Jesus Christ to be your Lord and Saviour.

It doesn't matter how old you are or how many bad things that you have done in your life including lying and stealing all the way up to murder.

Just pray the prayer below with your mouth and mean it from your heart and God will hear you and save you.

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven with You when I die. I agree with You that I am a sinner. I believe that You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins and that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thanks Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

Welcome to the family of God if you just allowed God to save you.

Now you are a real Christian and you can know for sure that you will live in Heaven forever when this life comes to an end.

As a child of God we are to avoid sin(wrongdoing), but if you do sin the Holy Bible says, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One."

Those of you that have not yet decided to place your trust in the Lord Jesus Christ may never get another chance to do so because you do not know when you will die.

Jesus said, "I am the way, the truth and the life: no one
can come to the Father(God)(in Heaven), but by me."
(John 14:6)

This means that if you die without trusting in Jesus Christ
as your Lord and Saviour you will die in your sins and be
forever separated from the love of God in a place called Hell.

The Holy Bible descibes Hell as a place of eternal
torment, suffering, pain and agony for all those who
have rejected Jesus Christ.

The good news is that you can avoid Hell by allowing
Jesus Christ to save you today. Only then will you
have true peace in your life knowing that no matter
what happens you are on your way to Heaven.

Praise the Lord!
Servant of the Lord Jesus Christ

All the cases I have bought have a metal insert that mounts behind the
plastic front piece. If that isn't there a simple piece of aluminum screen
wire could be cut and fit on the back side of the drive bay.

Tim..

Having dabbled around in this noisy rf environment for
about 20 years..the following things will help:

1. The Antec Sonata is a good starting point as far
as cases go.
2. Get away from the noise of the convential CRT
monitor! Check on a good Flat panel from NEC or
Samsung and many others. Study up on the FCC type
shielding they adhere to...usually Canada, Japan
Korea and others. Usually they are represented by the
series of stickers of authenication as to rf rules
they adhere to. This has improved over time.

Also, some old video cards have a lot of rf type noise.
If you have an older sound card, many of them have
digital/analogue converters that sing with noise and
Rf.

Be extremely awsare of any "switching power supplies"
these are a nightmare, generally, in a radio environment.
Stay away from these supplies..confirm that it is not
a switching supply.

Also, the battery back up power supply has
the same problem in a radio environment...they
emit unbearable noise on most radios..particularly
on the 80/75 meter bands.

Put your PCI card slot metal shields in where
you've removed the PCI card. Also, most of the
good cases, including the Antec, have some RF
shields..I've never proven to myself if these
work or not..however, these in theory help
maintain a lot of RF energy from escaping from the
above mentioned components..however, it is best
to get a better built component that does not
radiate much RF.

Make sure the radio is removed from the PC area as
far as possible...also note the reduction in noise
at different angles from the PC. Mind you, an old
CRT monitor will wipe you out with noise. A small
palm held am radio put next to a pc will help

find out which component is offending you. Note
also, on difficult situations, there are all types
of shielding material. Don't overlook your AC power
and noise brought in on the lines. Some power
filtering supplies from some cable suppliers
will help.

Good luck,

Leonard...

P.S some cheap fans cause electrical noise.
Again pc positioning is critical.
Google on rf shielding material

The sadd truth in the U.S. is that a great deal of us STILL THINK there was
a connection between 9-11 and Iraq, or that there were WMD's, but some how
Saddam managed to hide them. (we are incapable of thinking that maybe, just
maybe.. Bin Laden didn't like the relatively secular nature of Iraq, the implications
of that are more than our little minds can comprehend.)

I'd say 90% of us believed the U.S. intelligence actually suggested an attack.
it didn't, our own CIA recommended against it, the only reason I know this is
because I listened to the hearings where they gave Bush the "blank check",
yep.. we can thank our president AND congress (including Sen. Kerry) for the
Iraq mess. The congress just didn't want to appear "unpatriotic", as far as I'm
concerned, congress sent those men and women to their death because they didn't
want to "look bad". Mostly we can thank the president, still don't know why
he did it, but I know it wasn't the intelligence reports.

>Furthermore, not only is there no resolution in sight for America's military
>involvement in Iraq, it now seems that the Bush administration is making plans to
>extend the war into Syria and Iran and even to North Korea.

And as soon as he does, 90% of us will agree, we'll think it's a good idea.
We're dumb enough to believe whatever excuse given.

First, there will be talk of more war.

Most americans will oppose it.

The politicians will tell us it's a good idea because (insert
emotional cause here, BS reason there, etc... something with
an emotional "punch")

Most americans will be in favor of it, we won't bother to actually
think about it.

This is the way it went in the persian gulf, this is the way it went
in the latest "liberate Iraq" war.

If history proves itself, until we're actually slaughtered, beaten and our
brothers,fathers and husbands killed, wives and sisters raped.. until someone
actually invades U.S. soil and affects all of us... Americans (that's us) will
have grand visions of war.

I wish we WOULD ask why nations outside the U.S. might develop atomic weapons. We'd rather not think about that. We'd rather hang chinese made american flags on poles and talk about how proud we oughta be.

It is as though the white house has played the jedi mind trick on us, where the jedi would convince you to say & think something by repeating it to you.

Our greatest enemy is our ignorance.

>I believe it is time that the American people (especially conservatives) begin

>President Bush once quipped, "If this were a dictatorship, it'd be a heck of a lot
>easier, just so long as I'm the dictator." Looking back, we might need to consider
>that he was not joking!

Ha! you're dreaming. We're kept in perpetual distraction via issues like gay marriage. (a concept I find highly amusing.. it is as though the religious folks believe the government some how has more power than God to decide who can and cannot get married, very interesting..)

A good thing to (try anyhow) read is mein kempf by another famous dictator, you can tell it was written before they invented word processors, but the bit about "war propaganda" and the capacity for the populus to forget is quite amusing. It's also very sadd because there is absolutely nothing we can do to stop it. I've always wondered how the citizens who weren't in agreement might have felt. Guess we get to find out. :-(

>President Bush is making it very difficult for conservatives such as myself to

>Bush share a common vision of empire? And would the American people even be able to
>recognize it if they did?

Nope. Americans don't notice it. Most of us seem to promote it. Far as I'm concerned, becomming an empire as you point out isn't a goal. It's already _here_.

We'll never be omnipotent though, actually I believe we're in for a fall as our economic conditions seem to indicate. Aside from the lives, we simply cannot sustain ourselves much less a military in a country where nearly everything is imported.

There is literally nothing we can do about it. All we can do is watch it happen.

All PC power supplies are of the switching type.

A laptop running on it's batteries may be the quietest out-of-the-box
system.

A "KVM" (remote "keyboard/video/mouse") box will allow you to put your
PC many feet away from your radio. Use this with an LCD screen.

>Oh please. If Newsweek spoke the truth why did they have to retract?

As far as I know, (and I could be incorrect)

Newsweek retracted it due to the source not being as reliable
as it should have been.

Ie: one said person in a high place claimed the religious material
had been desecrated.

Newsweek retraced because there was only one source.

So, newsweek maybe lied, maybe didn't, probablility is that they didn't lie,
however "probablility" isn't newsworthy, hence the retraction.

Someone might correct me on this. I seem to recall hearing this
story on the BBC and don't have a "print" version.

I don't really trust FOX, CNN OR MS-NBC, CBS, etc... Kind of strange
when one thinks about it, there really aren't that many news sources.

It all trickles down from a few, organizations like the associated press or
reuters.

Dead _channel_ ?

Assuming it's a channel (one side works, other side doesn't)..

Check the FM-Mono/FM-Stereo switch or the volume pot. Since one side
works, it could something to do with the amp. (Do both sides
work with AM?)

I see from the photo it uses a regular pot, (good) a lot
of the slide pots are really crummy IMO. I've seen sliders
go out on a lot of radios.

Anyhow check the volume pot. Failing that, anything mechanical in
nature, THEN worry about the electronics.

What kind of gear do you use that can test input impedance at what I presume are very low signal levels? I've only ever measured the impedance of passive components which can obviously take a beating from a network analyser.

Is it as simple as taking a very low impedance source and putting a variable resistor in series with it, then seeing the effect on the output of the radio?

I'm not an RF engineer (though I have a MSEE). RF people do everthing in power, while baseband people think in terms of voltage. In the case of using an ADC, of course you care about voltage so you don't clip.

I'm going to set up my large Wellbrook on Saturday and plug it in directly to an oscilloscope with the 50 ohm terminator set. I'll let you know what I get.

BTW, RF engineers use power meters a great deal. I have a HP 432B which I'm sure will be able to get a reading from the Wellbrook. However, unless some signal dominates, you really won't know the proper peak to peak level due to an uncertain crest factor. Hopefully something will show up on the scope. The power meter is broadband. I don't know the lower limit, but the upper limit is 10Ghz.

What I consider to be a good investment is a decent microscope. I use a B&L Stereozoom 3 with 10x eyepieces, so I get 7.5x to 25x. Plenty good for surface mount components. You can always add 20x eyepieces if you need more magnification. The illuminators are about $20 surplus, but if I were starting out from scratch, I'd rig up some sort of white led illuminator.

Second best is a Luxo lamp. Surplus prices about $300 and maybe $20. I haven't seen used Luxos in some time, probably because they just aren't powerful enough.

This is the type of Luxo used in electronics assembly
<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=42884&item=7516115156&rd=1&ssPageName=WDVW>

This is a typical B&L stereozoom set up with a heavy base and arm so you can position it over your board, gear, etc.
<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48740&item=7516441151&rd=1>

I don't think I'd every buy these kind of items on ebay. You really need to inspect the glass on a luxo and the focus action on the microscope.

> http://www.greertech.com/hfloop/mymagloop.html
> The so called GREER TECH "Coax Loop" Antenna.

Three things:

1. My antenna is larger. My larger antenna will develop
more energy from a passing wave.

2. The shield opening is on the end on my antenna instead of the middle
of the loop. Technically the center opening should be better balanced
but I did not notice any difference.

3. My antenna has a termination resistor, which flattens the response.
You probably would not want it on a smaller loop.

Small point on the web page The comment "RF energy now travels from the
braid's outer skin to the braid's inner skin at the gap which then
couples to the center conductor" is not quite right. The shield
technically is not the antenna, the center conductor is the actual
receiving element. The coax becomes a magnetically sensitive antenna as
the shield blocks the electric part of the passing EM wave from it. The
shield develops a current from the voltage part of the passing EM wave,
which generates a secondary magnetic field that couples to the center
conductor in phase with the magnetic part of the passing EM wave. The
center conductor then sees a 2X magnetic field from a passing EM wave
where a local induction field will not cause this to happen. If the
coax is grounded on both ends then the current on the outer shield will
be opposing and cancel out instead of being in phase and having the
resultant gain.

Makes you appreciate that it is important to have a good ground on both
ends of a coax cable. If you have a bad ground on one end you have a
pretty good antenna.

The author of the web page is doing other things with the loop like
tuning them for transmit, which we don't care about here but he also
mentions a 2 turn loop. I defiantly don't recommend this as some of the
shield will end up floating because it must be separated on every turn.

For a shielded loop stick with one turn. Another reason would be cross sectional area will be larger with one turn.

I neglected to mention loop gain is in the plane of the loop and the null is perpendicular to it as it would be for any electrically small loop.

1782. Re: Car SW reception

Newsgroup: rec.radio.shortwave
Date: 2005-05-21 06:27:28 UTC
From: nm5k@wt.net
Message-ID: <1116656848.630068.15760@o13g2000cwo.googlegroups.com>
Source record: 22215

I'm on the road a lot during the daytime and I would rather listen to information than opinion; that rules out most US MW radio.

I've been wondering what the quality of the SW reception is like. What are their good points and bad points? Are they more or less stable than conventional portables or table top models? How susceptible to interference as you drive down the road? Do they work best with standard antennas, or should you install a specialized antenna?

Most "auto" SW radios I've seen are fairly ho-hum....Most I've seen are appx
equal to using a portable...Many are AM only...Actually, I haven't seen any that
cover SSB...There may be some tho...
It probably depends on the front end of the radio, but I suspect most "auto"
SW radios are designed to be able to use the same AM antenna...This may or may not be good, depending on the radio...
The best antenna generally is one that is resonant, and matched to the feedline
used, but often you can get a decent s/n ratio with soem pretty lame antennas.
The lower bands under 40m, will usually require some form of loading if you
want max performance on those bands.

I haven't found any comparative reviews of car SW receivers, so any solid information will be very helpful. Thanks in advance for the group's replies.

Myself, I have *excellent* performance SWL when mobile.....But....
I'm not using an "auto" radio, or antenna. I'm a ham, so naturally I use a ham radio...Which is a icom 706mk2g...
http://www.icomcanada.com/products/amateur/706mk2g/706mk2g.htm
My antenna is homebrew and covers all bands 80-10,
including WARC...I can run 160m, with an extra clip on wire to a tree, mast, etc...So naturally, SWL is kick butt....
I can tune the antenna to be nearest the band in use for max performance.
IE: if I wanted 31 m SWL, I tune for the 30m ham band...Near perfect....
It also covers VHF and UHF, and I have a 2nd antenna on the roof for that...The radio works all modes...Even wide FM for FM-BC, TV, etc
My mobile setup would probably smoke the average "auto" setup as far as low freq's, etc...IE: tropical bands, 120-90m, etc...My

reception
on those bands using the 80m tuning is pretty good. After all , you
don't need super sensitivity there...The icom reads out to single
cycles,
and stability is generally not an issue...Has ten tuning rates, so
tuning
while driving is easy too...
I'm spoiled....:) The average "auto" radio is like a fisher price toy
to
me....Seriously...
The moral of this tale...Get a good quality SW radio that will run off
12v, and use it with a good HF mobile antenna...Most all the icoms,
kenwoods, yeasu's, etc, etc, will run off 12v.
Will smoke most "auto" SW radios if you want real performance.
Of course, you probably won't be able to mount it in the dash radio
hole...You could keep one on the floor, etc...
The 706 I'm running has a detachable faceplate, and *could*
actually be mounted in a radio hole...But myself, I keep it attached
to the main radio, and use it as a one piece radio...I use it in house
as a tabletop when it's not in the truck.
MK

1783. Re: FS: Drake SW8 - NO LONGER FOR SALE

Yes that is the one. I have gotten some messages from folks asking me if I thought the R75 (my other radio, seen on the pics) is better. The SW8 is just adifferent animal - much better for utilility signals - and the sync works after the Kiwa fix. The SW8 has it strengths - more bands, battery power and a built in whip, a better speaker. For now I am keeping the R75. One of these days I want to upgrade to a JRC 535 or an Icom 8500 (or a 9000 if I can find a really good deal).

We only have his word at what she said. We do not know exactly
whatshe said or whathe said. So its premature to say that she was at
fault at all. Besides all he is really doing now is whining like a
baby and trying to get attention. Perhaps he is hoping spmeone will
take pity on him an offer to sell him a SW radio

>I hope you trust the BBC!

I might, if I could get a decent SW signal. In my area, there is a nightime FM feed of the BBC, I'm never quite sure if it's the real BBC or if it's the BBC packaged and processed to tell us what they think is marketable. (Guess I'm just grateful that I get anything at all)

Overall, I'd say the BBC is probably the most trustworthy or the least dis-trustworthy if you're like me. :-) (too bad it's so boring sometimes, but hey, boring is better than lying any day.)

Best bet is to find someone from the other country and ask them via the 'net whenever possible. Even then, be aware that someone could be intercepting their communications, so they are possibly being careful of what they say.

>If the Bushies would be more open and honest, then the news
>organizations wouldn't have to dig so hard to get the truth. What does
>Shrub have to hide? Why transport prisoners to foreign countries?

This is something I've wondered about myself. Why are they sent to Cuba? so long as they're outside the US they aren't subject to U.S. laws is all I can figure.

Considering Bush's influence with the FCC and the relationship of the FCC with the media outlets (and other businesses) I don't believe the news sources really try all that hard to find anything that might reflect poorly on the president.

The "coverage" during the last election was a pretty good example of why I don't trust the news. Didn't want to say anything bad about Bush unless they had something "bad" to say about Kerry. This meant that current events (such as bodies returning from Iraq..) went unnoticed.

The CEO of Viacomm quite bluntly stated that a republican administration was better for his industry.

The BBC has financial interests in the U.S television markets. Consequently, I can see where they might hesitate to say anything too negative about the current situation. BBCA does have advertisers here, I'm not convinced they'd be willing to tick them off either.

Politics aside, it is difficult to find any station willing to say anything negative about Walmart, Microsoft or who knows?

One cannot expect a news service to bite the hand that feeds them.

What would that help, unless we are talking about at least one hundred
meters ?

The important thing is to keep the radiation away from the _antenna_.

For the direct connection of noise from the computer to the radio,
audio transformers can be used to connect the sound card to the radio
and an optoisolator for the PTT signal. This will eliminate any direct
galvanic connection between the systems, thus preventing noise
currents from flowing from the computer via the radio to the antenna
ground, causing all kinds of interference on the way.

As I said above, it is important to minimise the radiation from the
computer from reaching the antenna.

I have an APC - Back-UPS PRO650 less than a metre away from my TenTec
transceiver and do NOT suffer from noise on any band ,because of this UPS
(which is always on -line).

****
i use 2 of the APC CS 500. lot of noise. i wraped both in alu-screening.
and grounded both to third pin on the mains. cleared up that noise. and,
if you use a router, check out the d-link- DI604. i used a link-sys for
too many years. they were cheap and easy to set up. tried all the known
name routers. ended up with the d-link DI-604. no noise at all. i have
a friend who's a manager for compUSA, and she let me try a bunch. this
is
wired, i didn't try the wireless units...
good luck/ just my 2 cents...

Anytime! It appears that the shorter lifetime diodes are used for the higher frequencies (VHF / UHF). When I built my first receiver and was looking for the right type of diode for the preselector, the engineer I was working with said "you need to use some real slow dogs for these frequencies".
In one of Rohde's notes, I remember his stating that a diode with a 1.5uSec minority carrier lifetime is usable down to around 200kHz. I have had good experience with 1N5767s down to 10kHz, but I am sure that there is a rolloff in sensitivity.

This newsgroup is about shortwave radio, but I think is also serves a need for social interraction. This is a good thing; people need to know that they are all special. If somebody runs into an unhappy situation the way Lucky did, I don't see any problem with his venting on rec.radio.shortwave.
It is a heck of a lot better than some of those off-topic political posts that tend to bash certain individuals.
We are all people, and we are going to feel emotional at certain times. Expressing our feelings are healthy. For those who don't believe this, maybe we should start a newsgroup entitled rec.people.automatons.....just kidding.
You are correct.....maybe we don't really know what the exchange was between Lucky and the eBay seller, but I think that my first assessment was probably correct.
I think that this was an inexperienced seller. I also think that this might have been the first time she was in this kind of situation and that she didn't know how to handle it. Part of being human, you know.....
I can understand Lucky's disappointment with the deal. I remember, several years ago I was at the Rockwell-Collins Inventory Disposal store. We all had a gentlemens' agreement that the first person in line would have the first pick of one of the good pieces of test equipment that were available.
My friend Jack was first in line, and he got ahold of a nice HP 436A RF power meter, with the sensors for only 20 dollars.
Boy, was I mad at him!
As time went on, I realized that people are more important than things, no matter how nice the things are. I told him that I was pretty mad at him at that time, but that his friendship was much more important than a piece of test equipment. We remained good friends over the years, and last year, he gave me a really good deal on an 8444A, Option 059 Tracking Generator. This is the matching unit for my 8558B Spectrum Analyzer.
The whole point of this rant (and rave) is that if a deal on one item is missed, another one will always show up in the future.
As an example, a friend of mine (Dave Z) just ordered a Lowe HF250 receiver from some place in the UK that does ship to the US. Around 800 dollars with shipping and import duty.....not much more than tha HF150E that the Japanese fellow bought from eBay.

1804. AFN=Always Forlorn News

Newsgroup: rec.radio.shortwave
Date: 2005-05-21 13:31:33 UTC
From: "&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com>
Message-ID: <Xns965D60E72B6FDTheDoctorisin@216.168.3.44>
Source record: 22236

Last night, while briefly listening to what I guess was the Armed Forces Network, (In the 7 MHz range, USB), they were certainly espousing cheerful topics. At first, they mentioned the importance of military families concerning their need to relocate to new neighborhoods, and saying that the current residents should heartily welcome the new family. (I have no problems with this, but I do believe that welcomes should not be limited to military families).

Shortly after, they went into the issue of being prepared. (OK, everybody should be prepared.) But their idea of being prepared was making sure that life insurance paperwork be kept at hand, that so called medical directives were prepared, and God knows what else. Still a sound idea, yet this is not the topic that most people wish to dwell on when their sons and daughters, husbands and wives, are fighting on foreign soil.

Another time that I had caught a show on the AFN, they were discussing the Terry Schiavo debacle. The problem is that the host explicitly stated how Terry's fight was not a moral issue, simply one of the right of her husband to carry out her desires against her life being artificially extended. To my recollection, the case wasn't that simple, and for the AFN host to paint it so is shameful. It seems to me that the AFN is trying to steer the opinion of their listeners into life decisions that benefit the military more than the individuals themselves. After all, why keep a wounded soldier alive when it is much more economical to allow him/her to die, honoring, in some cases, the misguided views of the family.

I have no issue with the soldiers in the U.S. military, and the hardships that they and their families have had foisted on them in this current situation with Afghanistan and Iraq, but the AFN is not exactly the cheeriest show that I have overheard. An at times buoyantly themed show with frequent death themes is sure to cheer all. Way to go AFN.

In anticipation of some comments to my post, if any, I offer the following:

1. Yes yes, the realities of war.
2. Yes yes, the realities of life.
3. Yes yes, the realities of death.

It still doesn't require frequent macabre themes on the AFN.

1812. best analog am/fm radio

Newsgroup: rec.radio.shortwave
Date: 2005-05-21 13:53:17 UTC
From: sid <sridhara@yahoo.com>

Source record: 22244

I want to buy a reasonably portable am/fm/sw radio. I want to take it to India (where AM frequency by far still rules) for my mother and hence it has to satisfy certain requirements

sound quality is important - lots of pocket SW radios these days skimp on speakers.

It has to be very simplistic - just a tuning and volume dials and band selector. Digital tuning can be nice esp since you can have one touch tuning but the number of buttons on face should not be confusing - otherwise analog is preferred since she is quite used to seeing where the slider stops.

reasonably portable - may be 7-10 inches long with 2-4 AA battery opearation. I read about GE superradio but it seems big needing 6 D cells. Also it doesn't have any SW band.

AM reception is very important. I just bought a panasonic RF-B11 it looks/feels cheap for the $50 spent on it and the AM reception is almost non-existant.

I honestly don't like 9-10 SW bands as you have to endlessly change bands and keep sliding up and down - in analog radios. One or two SW bands which receive only the strongest local (within country)channels would be nice.

The price should be reasonable - around $50 for an analog.

Is there anything out there?

Another idea might be to contact Jose Jacob, a SWL in India, and see what he might recommend that would meet local requirements well.

You can reach him at:

vu2jos AT yahoo.co.in

I'm certain he'd be willing to assist you.

The only thing boring here is television and your posts, of which I am one of the very few importers. I will try marketing them as a non chemical sedative as soon as I figure out how to package them without getting drowsy or lethargic.

I kicked the television habit a few years ago. You I keep around to serve as an example of how an education system can be be completely rotted from the inside out yet somehow remain standing. Cuhulin, beerbarrel Fort and you being good examples of what they churn out. Tad Early was certainly an exception, but I think he may have had tutoring or at least traveled outside of Toad Suck, Arkansas and the country.

Seems as though you still have a few other bad habits to kick. Like I suggested earlier, 'tard boy, best you go wait in line at your nearest Health CanaDuh facility and seek some help.

Be sure to take something to tote whilst you wait on line.

And please, leave the shortwave to the big boys.

==========

Why is the south known as Dixie land?

At a time when businesses did business using pounds, shillings and pence but the Portuguese Johannes, the Spanish doubloons and pistols, the French sous and picayunes, the Italian and Flemish ducatoons were all circulating and 1 shilling and 4 pence was one sixth of a milled peso (a piece of eight) or 2 shillings and a half pence was equal to half a dutch dollar (yes-a very confusing time) the Citizens bank of New Orleans issued a straight forward $10 bill, which became very popular.

However, because it was New Orleans and there were lots of French people around, on the back of the $10 bill they printed the French word for ten which is ï¿½dixï¿½. These notes became so popular that they became know as ï¿½Dixiesï¿½.

In 1859 a singer songwriter by the name of Daniel Decatut Emmett wrote a song called ï¿½Dixieï¿½s landï¿½ which became very popular too (see how we used to get on so well with the French!!!).

Anyhow, he was a Northerner and presumably because of pronunciation differences everyone thought he was singing ï¿½Dixie Landï¿½ and this is how the South became know as Dixie Land ï¿½ eh Voila!

http://www.skunkworks.webaxxs.net/2004/08/why-is-south-known-as-dixie-land.html

How does turning a radio dial make you a man, you dimwitted Bozo? I'm starting to see why you never married. It appears you lost all interest in womankind when you got your first Drake. Not surprisingly, a Drake is a *MALE* duck, which brings into question your obvious leanings toward a Cuhulinesque perversion and trans species homosexuality.

go play with your knob, 'vert boy.

1823. sw55 vs sw77

Newsgroup: rec.radio.shortwave
Date: 2005-05-21 14:38:21 UTC
From: Dave_In_CT <shdw1@no.spam.yahoo.com>
Message-ID: <qJHje.581$rr.204@fed1read01>
Source record: 22455

Has anyone ever compared these two rigs?

I have read reviews on both, and they seem similar in features other than the sw55 doesn't have sync detection. The sw77 has a few more features.

I'm just wondering if anyone here has done a side by side comparison and if so what was the results.

I have my sw77 in at Sony for a repair and I got a good deal on a sw55, but I have neither at the moment and am a little anxious to use them.

Just like a little kid. :)

The "Dix" story is apocryphal, and stories abound.

For some reason presently unknown to me (Early onset Alzheimer's, perhaps?),
I was under the impression that the origin of the term came from Messrs.
Mason
and Dixon and their famous survey line.

Source record: 22473

Just to add fuel to the debate, I have an RF-2800 that I might want to part with. The RF-2800, IIRC, is the same radio as the RF-2900 except the digital readout does not work on mediumwave. I am the original owner of this radio. It has been well cared for. It does sound great. Think of the audio quality of the GE Superradio in a shortwave receiver. It is in excellent condition. It comes with the carrying strap and the visor that goes over the digital readout. It has the original earphone, barely (or not ever) used.

I have the original sales receipt. I have the original manual. The original box is long gone.

Years ago, this radio was my primary DX machine. I received mediumwave from Europe in NY. It is very sensitive. I received a lot of LA DX and FM DX.

If someone wants to make me an offer in excess of what Universal is looking for with the RF-2900, I might be tempted to accept. Remove the NOSPAM to reply.

A logical conclusion assuming:

. Prisoners are actually guilty of something. (We really can't be sure
of this, some of them just happened to be at the wrong place
at the wrong time.) Keep in mind, we don't *actually* know much
about this, due to the surrounding secrecy. This secrecy is
a problem, we simply don't know and therefore can't make
informed decisions on election day.

. You don't mind loosing the intelligence they could have provided.

One doesn't obtain decent information through torture, such information
might actually be more expensive than not having it in the first place.

In my view, you should treat prisoners EXTREMELY well so that your advisaries
give themselves up easier. (politically not very feasible, most of us would
not like to see photos of our enemies with luxuries while soldiers are
being killed, most of us wouldn't see the psychological connection.)

Torture just gives them more incentive to fight & resist. A message like
"give up and it's easy street" is in my view, more productive.

dxAce <dxace@milestones.com> wrote in
news:428F3C66.ED30ACA6@milestones.com:

Just as with whining cops (all cops aren't whiners), there are indeed
jobs in the private sector that represent substantial risk to the
individuals performing them. None, I believe, would represent the level
that many in the military are exposed to, but some are certainly far
beyond the risk that cops are. If you don't want the risks, don't join
the military or the police force. Of course the draft will alter this
principle.

Also, I don't believe that our soldiers should be:

1. In Iraq or any of the Mid East.
2. In Asia, Europe, Africa, etc. etc. etc.
3. Used as the police force of the world.
4. Commanded in any way by the U.N.

Too many people are dying for amorphous ideals. (hint: "Ideal" is a NWO
word for egregious profits for a limited number of entitled companies).

What other nations are willing to sacrifice the lives of their own
citizens for the benefit of other countries? How many Vietnams do we need
to suffer through?

Those of you willing to send our own people to die in a foreign nation,
allegedly to help those in need, are you willing to travel to a crime
plagued city near you and risk your life helping others, or do you
believe in keeping yourself aloof from these problems?

My deep respect for those honorable men and women (most of the Troops I'm
sure) in the U.S. military that have lived their lives and performed
their military tasks as ethically and as morally as possible. I have no
respect for rapists, murders, thieves, and some of the other reprobates
that exploit the people in conquered lands for their own (the reprobates)
gain, amusement, pleasures, etc.

Regards,

Dr. Artaud

Jethro -- where did you get your 777s? I have one with a bad display and have been looking for another one unsuccessfully for years.

Anybody else know where I might get a DC-777? I cn't even find one on Ebay.

Thanks.

1856. Bush to have Dinner at the W.H. with XXX Porn Star (BREAKING NEWS)

Joshua Frank: 'Porn star to dine with Bush'
Posted on Saturday, May 21 @ 09:37:36 EDT
This article has been read 767 times.

"Mary Carey Comes to Washington"
By Joshua Frank, CounterPunch

Oh my. This Bush administration is something else.
On one hand they are all about "family values" and Jesus.

On the other they are all about raising mad loot so they can
maintain control of Washington. It's not their conservative
principles that really matter; it's all about the loot and the
power it buys. And Bush's new dining partners have very deep pockets.

Former California gubernatorial candidate and popular porn
star Mary Carey, whose real name is Mary Cook, will be
joining her boss Mark Kulkis in attending a dinner with
President Bush on June 14.

Not kidding. The National Republican Congressional Committee
(NRCC) is hosting the swank fundraising event, where hundreds
of well-heeled Republicans will be corralled in DC to hobnob
with President Bush. Over the course of the two-day event,
conservative interest groups will be talking with Bush
administration officials about real "important" issues. As usual,
money buys access: An individual ticket to the dinner festivities
alone costs $2,500. And no, Laura won't be sharing any new
jokes with the crowd.

Of course, Carey, Kulkis, and the porn industry have valid
reasons for lobbying Washington, such as worker rights
and protection. But Carey and Kulkis hardly represent
those interests. Carey's run for the governor of California,
which was marketed by Kulkis, was nothing more than a
flaunted publicity stunt. Her platform included, among other
things: Taxing boob jobs. Making lap dances tax deductible.
Recruiting porn stars to be "ambassadors of good will."
and putting web cams up in every room of the Governor's
mansion (okay, that one is intriguing).

"I'm hoping to run as Lieutenant Governor of California
next year," said Carey, who was arrested in Tacoma,
Washington for touching herself in a sexual manner this

past week. "Since Arnold [Schwarzenegger] is a
Republican, I thought this dinner would be a great
networking opportunity for me."

"I'm honored to be invited to this event," Kulkis said.
"Republicans bill themselves as the pro-business party.
Well, you won't find a group of people more pro-business
than pornographers. We contributed over $10 billion to
the national economy last year." She's got a point I suppose.

Kulkis' company, Kick Ass Pictures, guarantees
that "no fake boobs and no condoms" will ever be
seen, even though Mary Carey, who appears in
many of Kulkis' productions, has said in several
interviews that her own boobs are fake. Kulkis is
currently an Honorary Chairman on the NRCC's
Business Advisory Council, a roundtable of millionaire
business entrepreneurs who advocate for a robust
"pro-business agenda."

** Isn't it funny how the Bush administration could really
give two-shits about the Christian Right? The bible thumpers
are good for votes, and the porn industry is good for money. **

"I'm especially looking forward to meeting Karl Rove,"
Carey said about her forthcoming visit to DC. "Smart men
like him are so sexy. I know that he's against gay marriage,
but I think I can convince him that a little girl-on-girl action
now and then isn't so bad!"

I wish....

I actually met Mary Carey at an afterparty with the Pop Tart Monkeys about a year ago. She was suprisingly not a bitch, she was actually quite a nice person. A nice person that gets paid to get filled out like a check, but she had 'frop that would kill Tommy Chong.

From: Caveat Lector <UALLBeware@9984reader.com>
Message-ID: <8AQje.1453$Xh.738@fed1read07>
Source record: 22559

Maybe not the right place but seems there are several web experts here.

Can web spiders read and harvest e-mail addresses from a pdf file ?

Many users and folks like QRZ.com are using jpegs not ascii for listing
e-mails -- this seems to work.

So for pdf files without going to a jpeg --- are ascii text addresses
harvestable ?

Thanks

Programs like Adobe have search capability so I would think it's possible a havester could use the same technique but the time to open such docs and go through the search probably wouldn't be worth the effort to develop? This is ascii and any address posted to usenet can be harvested.

I thought this was spam. I thought I would shorten the title.
what do you mean cross post.

I think you just don't like that I was nice to Sherry, but you know
what, I don't know what has gone on here in the past.

I believe it is reasonable to give anyone the benefit of the doubt,
like I'm going to sort through post after post after post...
sure no-one is saying take a side, but I'd prefer not to be treated
indifferent - The reply I made earlier was to Sherry, yeah, it was your
words, but as she had quoted you..

This is just me talking, this is not a reply, I said self, stay out of
it...but personally, I was dissapointed that Sherry was right up in the
middle of that, and, I was hoping she had more neat things to share
over here see, had nothing to do with takingn a side, although, I did
say, muddling in this mess or something like that...I could have read
the thread, and showed a little reverence for the deed that had been
done. My apologies, and I mean that.

I get the feeling that a person is "required" to post on something
pertaining to cats, but I misunderstood, see, I thought this was where
cat lovers hung out. And seeing that all the people here love cats then
cats would come up naturally.

And people feel constrained to say, OT, or as a side...

to hell with that, whats wrong with people being real. If a newbie show
up looking for answers, their here, you guys are well versed,
experienced, compassionate and a wealth of resources to share. Not tot
mention, there is a big google search feild at the top of the group
saying...so they can also look through archives.

I haven't seen a case that wasn't metal. Some/most have plastic
fronts over the metal.
>
>Most of the cheaper cases come pretty close to good shielding, but they
>have these plastic filler panels in the drive bays that offer no
>shielding and let a lot of RF leak out.

As do the expensive ones as well. The $30 - $40 ones I've used had
metal pieces that had to be removed from the 5 1/4" bays to use them.
Unfortunately when in use the drives have plastic fronts even if they
do have a metal chassis.

>
>Most of the fancier cases in the computer stores around here have
>humongous plastic pieces on the side. I'm looking for all-metal.

Standard is metal, fancy is a plastic insert with metal cross pieces
and a lighted fan for effects.
Surprisingly, those come with metal covers over the drive bays behind
the plastic ones in the front panel.
>
>Rack-mount server cases seem to be pretty good in terms of metal
>shielding all around but I need something for desktop use.
>
>Any suggestions? If all else fails I can just put some perforated
>metal over the holes in a cheap case, but I'd rather just buy a good
>case to begin with.

Find a local computer store and look at the cases they handle. Look
them over and find which ones have the metal pieces over the drive
bays. They aren't inserts, they are actually part of the front
stamping and have to be broken out. Sorta like knockouts in
electrical boxes.

However, I doubt you will find much relief even with a full metal
case.

I built up all 4 computers we use here using standard parts.

Now, I have one of those with the plastic insert on the side setting about a foot and a half below my rigs (Icom 756 Pro, Alpha 76A, Alinco DR610T, and Kenwood TMV7A. The computer is an MSI K7N2Delta Platinum with a 3.2 Gig Athlon, 1 Gig 400 MHz CAS-2 DDR Ram, 400 Gig SATA RAID, and three EIDE 7200 RPM HDs totaling 920 Gig. The monitor (19" CRT)sets directly above the two duobanders. About three feet to the left is this computer which is the standard all metal case with an MSI K8N Neo Series with a 3.4 Gig 64-bit Athlon, 2 Gig 400 MHz Dual, DDR RAM.and about 650 Gig of HD space. (I don't have the SATA RAID installed yet.) The monitor is a 17" NEC 1760v. Each computer is on its own UPS.

All have the dual layer, high speed DVD R/W drives and are part of a gigabit network that has two more computers. There is a 5 port gigabit switch, router, and cable modem less than two feet to the left of the duobanders and just over three feet from the HF rig. (I also run the legal limit from 160 through 10)

I have no detectable interaction between the rigs and the computer system in the house. The one in the shop will break the squelch if you put the HT next to the case, or hold the antenna for the best pick up, out to about 3')

I just brought the HT (VX-7R) in and the squelch did not open even when touching the antenna to the individual computer cases.
I should add that right now the network is running near capacity with backups across the network and several large downloads from the cable modem.

My wife's computer is about 15 feet to the south (in another room) and I do not hear it with the HT in there. The one is the shop is at the end of about 115 feet of Cat-5e and I use the HT within a foot of the monitor. That one is only a 2 Gig Athlon, but it too has 620Gig of HD space and a 19" CRT monitor. Those too are MSI motherboards with my wife's being a K7N2 Delta series and 2.8 Gig Athlon. I've forgotten the model of the one in the shop, but it's the oldest of the four. BTW, that case is also one of those with the plastic side windows and lighted fan.<:-))

Whether it's the motherboards, the cases, grounding, or a combination, I don't know, but interference has not been a problem...unless you count the electric fence across the road. Why I can not pick up the computers at all in here, but can open the squelch out to about 3' from the computer in the shop under ideal conditions I have no idea. I think it's more of a crap shoot. Some high end systems bother as bad as some low end systems while some low end systems cause no problems.

All four computers run 24 X 7.

And like anything government controlled, they
try to suck all the fun out of it.

BTW, can't speak to rape, and legalized prostitution
may not have a direct bearing on molestation, but
some of these counties, esp Belgium, have been going
bananas about pedophiles recently.

The Belgium scandal is especially nasty, if you
haven't heard of it, and involved murder, high
level corruption, and huge, nationwide protests.

I'd be real careful about introducing the term sphincter into a shortwave radio forum. Those so inclined to experiment may purchase electro/mechanical stimuli. Thus possibly introducing more TVI into the HF spectrum. Try to be more careful next time. Thank you.

Dave:
The SW55 travels better. It's about half the size of an 8.5 x 11" sheet of paper. The SW77 has, as you said, the sync detector. The choice really depends on what you need.

<commentaries on AFN>
> Dr. Artaud

AFN doesn't (as far as I have heard) have their own commentators. They have limited news offereings of their own.

Most of what they carry is contracted sources from stateside networks, predominantly FOX news. They do carry news from the three major networks on television, however, their primary source of news on television is Fox News. Their news programming is definately skewed to the right (Rush, Dr. Laura, Sean Hannity, Paul Harvey, et. al.) with some PBS (Jim McNiel, et. al.) thrown in.

Most of the public service spots are also borrowed from commercial radio/TV, with a few exceptions. One of the ones I least agree with is one where the troops are advised how to decrease their chances of becoming victims of a terrorist attack on public transportation (don't take this wrong, I think force protection is very important). The spot encourages them to sit on the inside seats on a bus or train, and the window and center seats on an airplane. My problem with this approach is that it makes our troops look like they are using civilians as shields.. :(

Aside from the lack of a SW band, the Superadio (especially a Superadio or Superadio II (these are better build quality than the SRIII) is an ideal choice for you. Yes, they do use 6 D cell batteries, but the life of these batteries in this radio is phenomenal. I have personally used a single set of batteries in an SRII for nearly a year, listening around 4-6 hours a day (alkaline batteries).

A couple of Tony Blair's ministers were under investigation a few years back for pedophilia. It's been quietened up. These perverts protect each other.

http://www.gaiaguys.net/vic.media.htm

The new Israeli ambassador to Australia is wanted in Brazil for running a child prostitution ring. They have photos, address books, everything for a trial and get an extradition order.

In general for RF circuits resonance means reactance is zero like you
said but antennas have a different spin on things.

The when the electrical "size" of the antenna is the same as a passing
EM wave the ability of the antenna as a "transducer" between a far field
and a local circuit is enhanced. Anyone that has used an antenna cut for
a band has experienced the best gain the antenna has to offer on that
band.

The best analogy I can think of is a tuning fork that will ring when
another of the same size is generating its resonant tone nearby.

Using 30ft of wire, square, in a Wellbrook ALA100, I get a whopping 120mVpp. It's much higher than I would have guessed. [Yes, the scope was put in the 50 ohm position.] The signal is dominated by a local BCB station at 740Khz, with a bit of 810KHz as well. I cranked the time down way slow to get a fat band on the CRT to check the Vpp. It's the occasional superpositon of sine waves that makes the vpp so high.

I have a selective level meter that I can try to use some other time to see the energy at each frequency. I got it in a bid lot years ago (I wanted something else in the lot), so I don't even know if it works. [I fact I got two and gave one away to save space!] I'd have to run a signal generator into it and see if it is trustworthy.

Anyway, that should give you a starting point. It's kind of obvious now why the 7030 switches in some sort of filter once you go about the BCB (technically the old US BCB, before it was extended.] The signal levels above AM BCB must be at least an order of magnitude lower, maybe more. If BCB is not in your target, I'd suggest a high pass filter before your amplifier.

Unless you have a spectrum analyzer handy, you might want to consider getting a selective level meter for your project, if only to very your measurements.
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=97140&item=7516344848&rd=1&ssPageName=WDVW
They don't go for much money since they supply is huge. They were used in telco years ago but are not required anymore (different technology or something like that.)

I never used the MAP, but the AR7030 has a variable width synchro and you can use passband tuning to go off center. You can pick either side band or a combination of the two, or even DSB.

There is a manual in the yahoo Sangean group.
I think C Crane co said you use a small plastic Spatula to push in the
plastic tabs;
- I tried it, then chickened out & sent it to them to fix..
Too fragile; designed NOT to be opened by most, IMHO.

- So they put in a new antenna; works fine

Dan

In the US, there's some amateur radio between 3500 and 4000 kHz. From
3500-3750 kHz is Morse code (CW) and 3750-4000 kHz is voice. Mostly it is
all on Lower Sideband (LSB). Reception seems to work at night or dusk.

Mike,

I am interested in your receiver...can you send a couple of photos?
And also, where are you located? I am in Southwest Missouri. Here is my
address for photos.....mgaluvr@aol.com

Thanks.....Bill

P.S. Is the SSB filter still in the radio? They are a pain to
install for me....I dont see well up close...

I don't know if gain is the right word. Is 'least loss' more appropriate?

It takes a HELL of a lot of incompetence for the
countries' most wanted man, held in a maximum
security prison, to walk out the door and almost
make it to the border before being caught again.

I mean that guy was about as beloved as John
Wilkes Booth right after his name hit the big
lights.

Hi there Pete :)

I was looking at the specs of the 150, and I see the audio output specs for the headphones jack is 4v 220ohms. Does the headphone jack put out 4v DC?? I'd like to harness it for it's 4v of power. What woud be the best way to to this and have one hot and one ground?

Since the headphone jack is mono, where would the 4v be hot? On the very tip of the headphone plug?

If I stuck a mini stereo plug in the larger mono plug and plugged it in, would one of the resulting wires coming out of the cut mini plug power out at 4v DC? What could I use for the ground {-} line? Surely it's not the other mini plug wire? Just use the radio's case for ground?

Thanks one that sees thru radios
Lucky

You're completely misreading the specifications.

They are talking about 4V AC, measured across 220 ohms. That's the level of
the audio coming out of there.

And newsgroups are for eveyone. If you are looking for an answer from
someone specific, and I think that's actually rude, then use email.
Hence there's no reason to address posts to someone specific.

THE MOST IMPORTANT QUESTION OF YOUR LIFE

This is the most important question of your life.

The question is: Are you saved?

It is not a question of how good you are, nor if you
are a church member, but are you saved?

Are you sure you will go to Heaven when you die?

The reason some people don't know for sure if they are
going to Heaven when they die is because they just
don't know.

The good news is that you can know for sure that you
are going to Heaven.

The Holy Bible describes Heaven as a beautiful place
with no death, sorrow, sickness or pain.

God tells us in the Holy Bible how simple it is to be
saved so that we can live forever with Him in Heaven.

"For if you confess with your mouth Jesus is Lord and
believe in your heart that God raised Him from the
dead, you will be saved." (Romans 10:9)

Over 2000 years ago God came from Heaven to earth in
the person of Jesus Christ to shed His blood and die
on a cross to pay our sin debt in full.

Jesus Christ was born in Israel supernaturally to a
virgin Jewish woman named Mary and lived a sinless
life for thirty-three years.

At the age of thirty-three Jesus was scourged and
had a crown of thorns pressed onto His head then
Jesus was crucified.

Three days after Jesus died on a cross and was placed in a grave He rose from the dead as He said would happen before He died.

If someone tells you that they are going to die and then three days later come back to life and it actually happens then this person must be the real deal.

Jesus Christ is the only person that ever lived a perfect sinless life.

This is why Jesus is able to cover our sins(misdeeds) with His own blood because Jesus is sinless.

The Holy Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you would like God to forgive you of your past, present and future sins just ask Jesus Christ to be your Lord and Saviour.

It doesn't matter how old you are or how many bad things that you have done in your life including lying and stealing all the way up to murder.

Just pray the prayer below with your mouth and mean it from your heart and God will hear you and save you.

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven with You when I die. I agree with You that I am a sinner. I believe that You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins and that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thanks Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

Welcome to the family of God if you just allowed God to save you.

Now you are a real Christian and you can know for sure that you will live in Heaven forever when this life comes to an end.

As a child of God we are to avoid sin(wrongdoing), but if you do sin the Holy Bible says, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One."

Those of you that have not yet decided to place your trust in the Lord Jesus Christ may never get another chance to do so because you do not know when you will die.

Jesus said, "I am the way, the truth and the life: no one
can come to the Father(God)(in Heaven), but by me."
(John 14:6)

This means that if you die without trusting in Jesus Christ
as your Lord and Saviour you will die in your sins and be
forever separated from the love of God in a place called Hell.

The Holy Bible descibes Hell as a place of eternal
torment, suffering, pain and agony for all those who
have rejected Jesus Christ.

The good news is that you can avoid Hell by allowing
Jesus Christ to save you today. Only then will you
have true peace in your life knowing that no matter
what happens you are on your way to Heaven.

Praise the Lord!
Servant of the Lord Jesus Christ

The most unbelievable thing is that Bush will send men all the way to Iraq to fight the terrorists and protect us from them. But, on our own soil, he leaves the border wide open for ANYONE to enter into our country undetected. They could be terrorists, illegals with bad intentions and unchecked diseases, allowed to just walt in.

Not to mention the TONS of drugs that come into the country. These soldiers should refuse to comply with orders for making fools out of them and the U.S. citizens of this country. While these soldiers are fighting terrorists in Iraq, their own wives, children and parents are not protected at all. Anyone can cross the border and so whatever they please.

He is treating the Mexicans better then his own people. We gave a illegal trespasser a chance and job, so in return he strangled the life out of a N.Y. woman who hired the company. The family is now left with no mother, no wife, all for nothing. He even taunted the family members that called her house in concern after he killed her. This was a couple weeks ago.

Last week a trespasser shot two police officers and killed one. All for being asked to leave a baptismal party where he was acting drunk. So, tell me, when will Bush do anything? When people finally die from someone crossing the border and blowing us up? He has sold out this country for the Latin vote. That means all he cares about is being voted back in even if means SELLING OUT THE COUNTRY AND US.

This administration needs to be booted out of office. We need the military and police to help in this. They are making
fools out of the poor soldiers that die for him in Iraq, and the narcotics officers that die trying to fight drugs dealers and gangs in this country. Yeah, bush is sure concerned about protecting us.

This administration can't even protect themseves. A plane get within 3 miles of the White House and Bush is not even informed about it. Very good. I feel real safe from terrorists and any POS that wants to wander into the U.S., screw like an animal and have 3 babies,
then use our medical services, welfare system and add billions to our

deficit while their babies become automatic citizens of this countires that must be supported.

So AFN being off tune is the least of our troubles. Hopefully they are thinking for themselves now.

Gain would be appropriate when comparing one antenna to another, or to an
isotropic source.

Thanks for the inputs.
Doesn't look promising.
I tried to join the Sangean group to find the manual,
but they won't let me. Seems that somebody's gotta approve.
Interesting that there ain't no information to approve.
If I wanted the information next week, I'd have asked next week ;-)
Sigh!!!

Hello John,

No preamp is necessary or even desirable. I highly recommend a rotator. This is the only "option" that is desirable. An inexpensive Radio Shack one will do. I use their 15-1245 which sells for about $75. You will also need their 20-gauge three-wire rotator cable (make sure you get exactly that only - their salespeople are not always familiar with it). It sells for about $15 for 100 feet.

The antenna comes with two spare fuses (it should be rarely, if ever, necessary to replace the fuse) and a Stancor STA-300R AC-adapter for the US. Should you wish to purchase additional "backups," Allied Electronics sells them at reasonable prices.

Best,

Joe

I've owned two AR7030s, and I'd agree with you about the flexibility of synchronous detection in that receiver. Among all receivers I've had experience with, the AR7030 probably stands to benefit the least from a Kiwa MAP. The AOR rig is a pretty impressive package even in stock form-- you can accomplish a lot with its S-AM mode, PBT, notch, and other features.

You must have missed my post on the signal level I got out of my ALA100. John wants 5.5dbm,or nearly 1.2Vpp if I did the math right. My ALA 100 produced 120mVpp, so a gain of 10 is needed at the least. I had 30ft of wire in my loop, so the signal strength is probably larger than an off the shelf Wellbrook loop.

What did you measure from your loop to lead you to the conclusion no extra gain was needed?

The 7030 synchro is almost too flexible. You need to pick both the filter bandwidth and move the passband to use it effectively. The radio remembers the last shift you used as well as the filter, so when you plop it into synchro, it might actually be set up inappropriately for the new signal. It makes sense to save the last settings for most modes in the radio (LSB, USB, whatever), but I would have put something in the firmware (or at least an option) to pick an appropriate set of starting conditions when you switch from AM to AM synch. My guess is the designer figured the kind of person who uses synch uses it all the time, so they would stay in synch mode and use the automatic synch feature. I prefer to search for signals in AM, then switch to synch if I think it is appropriate.

http://www.universal-radio.com/catalog/hamhf.html

I'm not familiar with the Icom 725, but, in short, the major difference is that you won't be able to buy any new tabletop shortwave radios from Icom or, I suspect, Yaesu either. There still will be the excellent Palstar and other Shortwave Tabletop receivers from other manufacturers, as well as used R-75s and others for decades, traveling from one owner to another.

Remember the term "opinions". You will get opinions on this NG masquerading as facts.

My fact (notice the irony here, actually my opinion), you can get excellent performance from the Transceivers. I have an Icom R-75, Yaesu FRG-100, and the Yaesu transceiver FT-840, they all offer similar performance. The only thing I don't like about the FT-840 is that it has a transmit button on the face of the radio (I believe this is common on many Transceivers). When depressed, it transmits all the time. Accidentally depressing the button could damage the radio if the radio is not SWR matched to the antenna, which mine isn't, as I am just using a simple random length wire antenna. In order to reduce the possibility of damage, I keep the output power turned all the way down.

I use the radios quite interchangeably, not having a major preference, reception wise, for any one in particular.

In theory, if I paid $600 for the transceiver Yaesu FT-840, and $600 for the receiver Yaesu FRG-100, I would hope that the circuitry in the "receiver only" has an edge on the receiver circuits in the transceiver, but I can't tell the difference. In addition, the transceiver has the ability to shift the IF to alter the Pass Band.

http://www.universal-radio.com/catalog/hamhf/2319.html

One point though, in my case, with the transceiver, I needed to buy the 6 KHz filter for listening to AM shortwave and MW, so that was another $115 added onto the radio's cost. I installed it myself, it was a drop in, after taking the radio partially apart. (covers).

Make sure any transceiver that you plan to buy has the filtering for your needs. Though I could have listened with the standard filter meant for SSB, the sound would have been very poor.

http://jim.jingozian.tripod.com/ft840faq.html
"AM Settings Most owners who have had difficulties with AM audio quality have reported that the 6 kHz option AM filter (p/n XF112A) is an absolute necessity for both transmitting in AM. It also makes the FT840 an excellent SWL receiver. Use of a AM modulation meter can tell you the percent of modulation your AM signal is peaking at. Ideally, you're looking for 100% modulation; over 100% the signal get distorted, under 100%, the signal sounds weak. For more information on running AM in the ham bands, go to The AM Window, where there's info on frequencies, audio tips, and running modern solid-state rigs on AM."

Dr. Artaud

You don't have to worry about transmitting on a transciever with no antenna
or an unmatched as the SWR circuitry will cut back the power.
If this wasn't the case hams would be going broke replacing finals.

Source record: 22690

Pastor Peters with Scriptures For America is on WWCR transmitter #4 24 hours per day on weekends already. Started this weekend. That transmitter has some pretty good frequencies, but jumps around a bit.

Go to http://www.scripturesforamerica.org for the frequencies or go to www.wwcr.com and get the schedule for transmitter #4.

No one "stole" the time from Bro. Stair. It seems WWCR told him they had to have more money for the transmitter which he was using 24/7 and he was not willing, able, or led to pay more. He often bragged to his little group of how stations would ask for a certain price and he'd offer them *much* less and they'd still take it. Sometimes they carried him for free - perhaps because they enjoyed his programming and perhaps just to fill the slot(s) with little effort. :-(Anyway, he's still on SW, just not on WWCR as much.

I think most / much of transmitter #4 air time has been sold to the various broadcasters.

There would be very little if any difference. In a transceiver you are paying for the transmitting part of the radio as well as the receiving part. Now unless you have a license to get some use out of the transmitting part, then you have wasted some of your money.

I have one and like it quite a bit. It feels like a solid radio, it sounds better and receives better than my dx-402, and the ergonomics aren't nearly as bad as people make it out to be. The analog display is "digitized", so it seems like a gimick.You can do direct entry tune, or use the tuning knob on the side...it doesn't chuff! the tuning knob doubles as the volume control; just press vol, the turn the knob, then wait half a sec. before tuning. It handles a random wire clipped to the telescopic without overloading, and you could use something like a Sony AN_LP1 with it easily. I live in a very (electrically)noisy town in NH so it's hard to test out the true DX capabilities....on a quiet day,though, I've been able to pull in Iceland, RVI via Irkutsk(when they still b'cast in English) channel africa in the afternoon (EST) as well as the majors all over. I wake up to R. Lider from Colombia or R. Nacional from Paraguay in the early morning, and they come in just fine! I haven't tried out a Grundig 400PE, but I suspect the 1103 is every bit as good. I even found the perfect case for it.....a Gameboy Advance case ;)

If I were a "philosophercater" (excuse my Bush-speak), I would think AM performance on a transceiver would be not of much concern to the manufacturer, so the performance may not be as good as what you would find on a receiver. I'd expect no drawbacks in sideband.

Transceivers get a bit hotter since you have more circuitry. It follows that they draw more power. Not that much of a big deal unless the transceiver uses a fan.

Thanks, it helped. Managed to get it apart breaking only one tab.
Had a short (1/4") piece of #16 solid wire between the speaker and case
causing all the distortion. Wonder how the heck that got in there??
If this thing had a BFO, it would be a nice radio ;-)
I like the ICF-SW100 much better.

There may be something that resembles an isotropic source, but these guys claim an appropriate antenna is just hypothetical.

http://radioworks.com/nhpant.html

The idea of 'gain' is still troubling, though. I can see a tuned circuit building up energy if there were no resistance in the circuit. With the minuscule voltages available in many shortwave radio signals, there isn't much to spare. Getting the antenna to lose as little as possible is an easier concept.

I'll have to do some research on this.

1980. For Sale: Panasonic RF-2800

Newsgroup: rec.radio.shortwave
Date: 2005-05-23 02:06:30 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <y_OdnYSvXIE6pwzfRVn-gw@comcast.com>
Source record: 22615
Cross-posted to: rec.radio.swap,rec.radio.shortwave

I have an upgraded RF-2800 for sale. the stock 2800 has several tuned circuits but no ceramic filter in the wide position. because of this the skirt selectivity is quite poor. I have inserted a wonderfult LF-D6 filter. this filter is the best filter I know of for quality SWL work. the nose is wide and the skirt is tight !! the way it should be ! now this radio licks butt ! the narrow poition can be engaged if you want, that has not been eliminated.
the light lever is not original but blends in quite well with the other button levers. the feet extensions have also been removed and the radio looks a bit better now. overall condition is very nice.

the 2600/2800 and 2900 radios from panasonic have great sound. it is one of the few radios I have worked with where upgrading the speaker didn't help improve sound quality on shortwave, only FM. this unit has the stock speaker.
the MW performance on this set is very good, I pulled in a lot of MW stations in a test the other night.

for those not aware of it, this model has digital readout on shortwave only, the 2900 added MW and FM digital readout. also all three models drift a lot in the first hour. it is said that panasonic did not use a quality variable capacitor, I do not know if this is the case, but they added a calibrator so they must have known !!

price is $100 plus shipping. which I consider a steal. this would make a great bedside radio or one just for old times sake ~!

email me at mmaghakian@yahoo.com

Yaesu, Kenwood and Icom have all made receivers that looked like they were a copy of the transceiver(or is that verse vica?), but looks can be deceiving. My guess is that probably ten times as many transceivers are sold and as a result they don't cost that much more than a look-a-like receiver. I haven't done that much checking but IIRC they always add a few bells and whistles to the receiver as well as a built in power supply. Granted a transceiver will use more current and run hotter. As far as performance on the ham bands in SSB would probably favor the transceiver and performance in the AM SWL bands would probably favor the receiver. One definite advantage of getting the transceiver is if the SWL wants to be a ham he is one step closer with the equipment.

Buy it on ebay. Liypn of V Com Collections ebay store will likely have
the Degen version (same radio) for around $50. He can't use the name
Degen, however, so the ad will just say "1103 SW radio".

I don't think the 1102 is less user-friendly than the 1103... in my view, it's the opposite. The strange volume control on the 1103 and the non-telephonic layout of its keypad make it less intuitive under low-light conditions than the 1102. Both radios are pretty easy to operate after you've had the chance to use them for a little while, though. The fake analog dial on the 1103 was really not a selling point for me, since it's not an analog tuned radio.

They are both excellent performers in their price range.

miso@sushi.com wrote in news:1116809670.568364.132600
@g44g2000cwa.googlegroups.com:

Ah, therein lies the need for the 6KHz filter for the FT-840, to bring
the perceived response a little closer, very close indeed.

In addition, the heating created by a transceiver will be largely
impacted by transmitting. When not transmitting, the power consumption
and heating will be considerably reduced. I have never heard the fan run
on my FT-840, it never gets that hot. Even one of my Handhelds with a
diecast metal body, you can carry it all day as receiver, but when
transmitting, the case gets fairly warm.

(I am tired, I just figured out how to spell transmission, I had been
trying to spell it transmittion, but it didn't look right. I restructured
the sentence to eliminate it, but later realized my folly).

Regards,

Dr. Artaud

Would the 1N5767S be a good replacement for the front-end bandpass
filter switching diodes in an R8? Drake used a 1SS135.

BAD,
.
Reading the Subject Line would have made one
of the GE Superadio (I) or II the best answer.
.
It seems the "1 Sid" also wants 1-3 Shortwave Bands
and a smaller radio to boot.
.
If the need was simply 1-3 Shortwave Bands; then the
Grundig S350 (Tecsun BCL-2000) would be a good answer.
http://tinyurl.com/7v76l
http://www.grundigradio.com/US/products/product.aspx?catID=2&subCatID=5&prodID=24

.
Since it is about the same size as a GE Superadio (I)
or II with three Shortwave Bands.
SW-1 : 3.5 - 7.0 MHz
SW-2 : 7.8 - 15.0 MHz
SW-3 : 16.0-25.0 MHz
http://tinyurl.com/c4qty
http://www.grundigradio.com/US/products/product_specs.aspx?specs=true&prodID=24&catID=2&subCatID=5
.
~ RHF
. . . . .

Most if not all practical antennas have directivity and therefor gain. I
was not being specific as to what the gain was because I was making a
general statement about antennas so I did not make the reference.

>
> thanks in advance
>
> wayne

I would suggest running a coax out to Your back fence grounded by twice by a grounding block
outside Your window and a 9:1 UNUN where a sloper wire between 20 to 100 feet is attached to the UNUN. be sure to put egg or bone insulators on the ends of the wire antenna . so weight and wind It is not pulling directly on the UNUN .(leveraged)
The block/UNUN shoud be electrictly attached each to a ground rod. That's if You live in a suburb where Your back fence
is half way between the electrical noise given of by Your house and Your neighbor that lives in
back of You , If You live in the country or just have a big lot, place the feed point as far away from houses as your coax reaches/can.
You will need an adapter for Your RCA jack on the RX-320 either for an SO-239 end(for 50 ohm coax) or and F-connector end(for 75 ohm coax). Radio shack should have them

It works great for MW and Even better for SW, CW is just a mode so It doesn't really matter.
It takes a little effort but is well worth it ,the noise floor is cut down alot ,and some intermod .and with an UNUN ,it protects Your Radio from static discharges.

This is the feed system I use ,
http://www.hard-core-dx.com/nordicdx/antenna/feed/feed1.html

http://www.hard-core-dx.com/nordicdx/antenna/feed/ Read about feeds here

build Your own UNUN http://www.hard-core-dx.com/nordicdx/antenna/feed/9_1balun.html

There are a few companies that sell UNUN's already built like the MLB , ICE 180 there are others
brands. do searches

Should be like this

RX-320 ->adapter-> short piece of coax-> ground block attached to a ground rod outside

Your window.-> long run of coax(buried if possible)>UNUN attached to a ground rod-> a long-wire antenna

of course ,you can Use this system for any Radio

Hope that helps

"now this radio licks butt !"
Don't you just love typo's.

I own a RF2800 and it does have good sound with independent treble and
base controls. It has a good size speaker in the case. Main complaint is
drifty tuning that has to be touched up every so often. This was my
first solid state SW radio. I think I bought it around 1980 to 1983 time
frame for something like $300 new.

Hi Lucky,

They would be talking about the AC level across 222 ohms; there wouldn't be
any DC there. If you do have any questions for me, it would be fine to
e-mail me directly.
There are quite a few knowledgeable folks on the NG, so it is good to
include all of them with these kinds of questions.

Why can't he use the name 'Degen' if that is indeed the brand name? That is somewhat akin to putting up an R8B on eBay and not being able to use the name 'Drake'.

Hi Pete

I wasn't sure if I should e-mail you directly since you never gave me permission to do so. Yes, I should of just posed it as an open question for everyone to answer. I wanted run a LED off the power from the radio.

Right now I'm using a 3v w/wart PSU for a 5v super bright blue LED. In fact, I don't need a resistor for it. Works just great but I was looking to make it more compact and eliminate the PSU. I really don't want to go inside the receiver to tap a line for it. But I might in the future.

Thanks
Lucky

Well, I had the Kaito 1101. For the money, it really is a good little radio. That being said, it's gone, and has been replaced by a Grundig YB 400PE. What do you gain from the use of the Grundig? Everything. It's a pleasure to use, sounds and performs wonderfully. Looks better too. Just one guy's opinion. Darren

Source record: 22645

I've used one since December of 2004.

For the price I cannot think of a radio that comes even close.
Positive points:
-Very sensitive on all bands.
-Dual filters do a good job of minimizing splatter on AM.
-A tuning knob makes band scanning a breeze.
-Does a good job on ssb signals and stable enough to allow tuning around without retuning.
-Lots of memory channels.
-Stereo FM through headphones sounds good on this set.
-Direct frequency entry.
-Audio from the speaker is amazingly good considering it's size.

Negative points:

-Images abound as you would expect on a radio at this price. Not a big deal, just be aware that Radio Havana doesn't broadcast on 5100 khz.

-S Meter is disabled on FM for some reason...not a big deal.

-An unfortunate method of numbering memory channels restricts the usefulness of 268 memories. For some reason Degen chose to use hexadecimal (base 16) numbering which adds several levels of complexity to organizing and using memories. Compounding that is a bug in the firmware that retunes the AM frequency when an FM frequency is retrieved from memory.

Analog shortwave dial has some retro visual appeal but the space could have been used for something else.

> I wonder if the Hamvention did something to tick
> them off.

If they exhibited their typical condescending
mentality or mannerisms like they do to the paying
dealers/vendors in the outside flea market, this would
not suprise me at all. I'd not even donate a cheap prize
pair of dollar store headphones. BTW we really liked the
condition of the dealer's parking lot this year!
The blacktop of the Hara Arena reminded me of a
cross between the Lunar landscape and the San Andreas
Fault in some places. As someone on the live chat
commented quite accurately: '..the Hara should rent out
their parking lot to Range Rover for Customer Test Drives
during the weekdays'.

> Also I would say that both the flea market and the
> inside vendor numbers were down by at least 20%.
> There were MANY empty spaces in the flea market
> area when in past years it was mostly full.

Year after year less and less sellers. I attribute this to
e-Bay, the cost of selling at the Hamvention and the
ever diminishing returns. 9:00 AM on Sunday was
positively dismal. I would say that fully 40% of the
outside Vendors packed up and left on Saturday night.

This year was our last, Dayton is just not worth it anymore.
Better to sell it online and have the UPS Truck
come to your house and pick the stuff up for
delivery instead of carting it 500+ miles just to bring
it all back home rain dampened again...

> I also heard that Mendelson wanted more space and a break
> on the flea market rental since they are going out
> of business. The Hamvention, based I what I heard
> around, said no dice, so they didn't even bother
> to show up and they're only a few miles from the
> arena too.

We heard the same story making the rounds
among the dealers on Saturday. Probably true.

> They spaced out many of the inside
> vendor booth areas so it wasn't too obvious that
> the number of vendors was way down.
> What did anybody else notice? I hope the above
> isn't a long term trend.

Those spaces were a combination of that and
a small number of dealers who decided not to
go at all the last minute. The hamfest committee
was hoping that alot of people would show up
and pay for a space...like that was going to happen. (!)

I also saw several tables of 100% cell phone and computer
junk which was a major disappointment. I would be
rather PO'ed also if I paid $40 to get in and I saw
standard flea market type vendors selling stuff that
I could see, at any weekend mart FOR FREE and
with no admission charge!

Forget it folks..
IMHO Dayton is finished, stick a fork into it.
It will never go back to what it once was Years ago
despite all the marketing and hype that they make it.
Oh there will always be the camaraderie and the new
equipment showings, but the flea market is just about finished.
Stick to hamfests located with 30 miles of your QTH.

If it was so bad in years past, why did you go this year. My last trip to Dayton was about 1995 and my impression of the used equipment for sale outside was that it had been carted between too many other hamfests. And there was a surprising amount of non-radio electronic gear and parts. The inside was the usual glitzy trade show and one vendor actually had bikini clad women prancing around.

In my experience hamfests in general are showing lower attendance because of both internet-based competition and the ham radio hobby itself being on the far side of the growth and maturity curve.

In the Hamventions defense it's not their fault as to what is brought inside for sale. They're probably trying to do the best they can to put on a good event.

Agreed, most stuff is going to eBay these days, and no problem with that. Can't really fault a seller for wanting to move his/her equipment rather than waiting another year for Dayton.

I've seen the same here even with local fest's over the last number of years.

Hi Lucky,

You are welcome to e-mail me directly any time. I get quite a few e-mails each week, and I am happy to answer them.
I am not sure if you want to use the LED for a backlight. If so, there is a company in Youngsville, Ohio, called Lumitex.
They manufacture fiber optic panel illuminators of the type that is used in the Drake SW-8.
They were nice enough to send me a 1 by 3 inch unit. I ordered a red one.
Basically, it consists of a fiber optic panel that fans out to a bundle of fibers, of which the end has a coupler / ferrule that is terminated by a high brightness LED.
Removing the foil backing from the LCD is not for the faint of heart, but if you are careful you can do it.
After this step comes the hard part.....this is removing the layer of adhesive that was originally on the foil backing.
I used Goo-Gone, a citrus based cleaner. It takes about 2 to 3 hours to complete this task. It was worth the effort, but I wouldn't want to do it again. The LCD is very fragile and easy to break.

Pete

Source record: 22505

I own 2 of the 1103's, one purchased in Dec 04 and the other about a month and a half ago. Absolutely no complaints with either of them. You can buy a better radio, but not at the sub $50 price that the 1103 goes for or anywhere near that. For more info and personal reviews and accounts you can check the 1103 group on Yahoo groups.

Good Luck

Mark

2021. BBC - I wonder why no comments

of years.

Since this was the first time I'd been to Dayton in about
5 years, it was at least nice to see a bit less flea market
space devoted to DVDs and videos, console games, and
other items like honey and jam. I remember in 2000 about
twice as much space devoted to that as there was now.
Also unlike then, I could find more purely SWL related
stuff around, which was a nice change. (I didn't see
Joe Walsh, Ace, although there was one guy I did see
(or hear, rather) whom we must have seen down half
of the flea market aisles. He was yapping on a cell for
so long I was wondering how on earth he was keeping

his battery charged.)

Someone had an R8B for $1180 or so, someone else had an R8 for $500, and there were several vendors with R-5000's and IC-R71A's for $400-$450. There was one group that had an HQ-180 for $600, and the thing looked like it was dropped off a truck; the 180 that someone was selling for $400 looked in much better condition. There were several SP-600s and SP-400s around as well as Hallicrafters SX-100s and older Hallicrafters and Hammarlund stuff.

As for Hara, I often wonder how that place stays open. They obviously don't put much money into the facility in terms of upkeep or upgrading the facilities; hell, the whole place still seems like it's in a 1950's time warp. That whole area of Trotwood looks like it's downtown Baghdad, with the Salem Mall partially torn down and mostly for rent, and the other empty buildings in the area. If the Hamvention decided to move to the Dayton Convention Center, Wright State's Nutter Center, or the UD Arena, Hara Arena might just fold.

If you want realtime, use IRC ;-).

I've got an offline newsreader system where I download onto my Linux
box once or twice a day off my ISP's server and as many freebie news
servers as I can find. And upload my outgoing posts to my ISP. So the
stuff I post gets saved up overnight, (and I review it to weed out the
REALLY stupid flames), and goes out as a batch the next morning.

That gets me more news than I can read in a day in about 20
minutes of dial up connection.

I'd say the major difference is many SWave receivers minimize signal
fading with "synchronious selectable sideband" circuitry. I don't know
of any ham transceiver that has that feature. The Icom R-75 reciever
doesn't have it either, but most of the medium-to-better receivers,
such as the Sonys, the Drakes, do.

Thanks for the report Mike... Guess I might as well try Joe through his email. Figured he might show up at Dayton though. Dayton I guess is much like other get together's or festivals around the country.

The Tulip Festival here at one time was a major attraction, but for some time attendance has been dwindling. Not surprising as there are so many other things out there to attract peoples attention.

Yes I use it as a backlight in the night. It works great. I fold the wires and tuck them into the headphone hole. Then, use the long metal legs of the LED to bend it towards the display. It really works very well. I thought I had it made in the shade if I could get power right from the phone jack. I figured I'd just plug it in and...

But no, life can't be that easy :)

2030. Astron Power Supplies Questions

Newsgroup: rec.radio.shortwave
Date: 2005-05-23 17:59:42 UTC
From: Lucky <lucky@TheBotStopsHere.com>
Message-ID: <11946gctnms0jdf@corp.supernews.com>
Source record: 22514

Hi guys

I'm looking to pick up one of these for a couple receivers. Now I seem to have run into a concern. I did some research and found several models that don't offer crowbar overvolt protection.

The RS-3a, RS-4a, 5a, and 4L and 5L.
But, I see they have a primary fuse on back.

Now take the RS-10a. It has crowbar protection, but no fuse for a primary overvolt. So I figured if they have crowbar, they don't need a fuse. But now I have found Astron models with crowbar but some use a fuse while others don't.

So what's the story here? Which one is best? One that uses both a fuse and has built in crowbar protection or it doesn't matter as long as they have crowbar?
Why do some use both then?

Why do some not use a fuse at all? That doesn't seem to make sense.

Thanks for replies
Lucky

Ace, the R8B is a great radio and the tuning knob is easily fixed with a really nice heavy metal one from Mike Magakian.

The Icom case is also solid like the old 48 Ford bodywork, whereas the Drake is made of empty sardine can tins = pity.

You want a crowbar and a fuse.
Avoid switchmode supplies like the plague.

This is a link to one review of the RS-10a:
http://www.eham.net/reviews/detail/3726

This link to a dagram shows a fuse:
http://www.repeater-builder.com/astron/astron-rs-10a.jpg

A long time ago in a different life (20+ years ago) I was responsable
for the operation of a 2 mtr repeater and I picked a Atron supply that
is still chugging along with no trouble. I don't remember which Astron
but at least back then, they made great supplies.

I added a surplus magnetic circuit breaker between the output of my
Lambda ~15A 12V supply and my equipment, followed by a seperate
fast acting, no falses ?(so far) crowbar. This is the BEST OVP (Over
Voltage Protector) I have seen in 30+ years of working in electronics.
Added a heavy si diode wired to shunt reverse voltage to ground.
This is located in the power distribution section of my system. With
this
I can directly power my radio room from my car, for emergencies, and
won't have to worry abvout areverse connection,or nasty spikes damaging
my equipment.
Power supply on floor feeds voltage/current monitoring with R&OVP and
breakers to protect and alllow me to power down sections to reduce
power load. Sounds complex and expensive, but it wasn't and I bought
everything surplus. The distirbution sections has stayed "the same" for

the last 20 years, I have gone through several power supplies. I have
connections for 2 lead acid gell cells, and an outside connection to
allow
an external +12V power source.

Think modular.
Build it in sections as needed.

There is a 10a on Ebay for $10 but it's missing the front print and don't know if it's missing the fuse too. I think the best way to go is buy one new. You just don't know the real condition of it and how long it was used. The best one I could find new for the price is the Astron RS-7a. $55.

So it's either spend like $65 on a brand new one or buy one off Ebay. What do you think? $10 for a 10A might not be too bad though if I use a surge protector with it.

Thanks
Lucky

I wouldn't hesitate to buytheon you mention. But I don'tknow what your electronic skills are. It could be a very good deal, or a boat anchor.

Take a look at the diagram in the 2nd link and decide if you could rebuild one. The transformer, caps, and heatsink are the expensive parts. If you have those repair is easy and fairly inexpensive.

But there is something to be said for a brand new, and under warrenty item.

Terry

You know what, screw Ebay. My R75 is almost brand new and I love my Lowe HF-150 so why not "splurge a little" :) and buy a new one? I just bought a brand new Astron RS-7a. $45.80 was the cheapest I could find it plus $12 shipping. It weighs 10lbs.

I think I did the right thing buying a new one.

Guess what? I cancelled the damn order. After looking carefully thru the finer print, it seems they are in "perfect condition returns" That why $45.80

Hate that crap. You see these deals on radios till you call and finally found out "our loss is your gain" is that are "open box" items or "factory refurbished"

Lucky

2042. Turn $5.00 into 15,000 in 30 days

Newsgroup: rec.radio.shortwave
Date: 2005-05-23 20:34:24 UTC
From: wfbathome <wfbathome05@yahoo.com>
Message-ID: <1116880464.951292.249540@g49g2000cwa.googlegroups.com>
Source record: 22526

How to Turn $5 into $15.000 in 30 Days with PayPal

"I WAS SHOCKED WHEN I SAW HOW MUCH MONEY CAME FLOODING INTO MY PAYPAL ACCOUNT!"

I turned $5 into $14,706 within the first 30 days of operating the business plan that I am about to reveal to you. If you decide to take action on the following instructions, I will GUARANTEE that you will enjoy a similar return!

Please do not be skeptical about this program. At least think about it for a few days. Otherwise you will be throwing away over $15,000 in cash! This system has been working for 2 years and thousands of people have joined and they have been amazed by the results of a little time and $5.00! You will too!

I became unemployed in August of 2001, along with several other colleagues at the printing firm where I worked. At that time I was living beyond my means and in serious debt. Several debt collectors were hounding me on an almost daily basis, and this consequently started a chain reaction that ended with the repossession of my car and then my home. As you can probably imagine, my prospects looked pretty bleak.

Then, in March of 2002, I received a short and simple email telling me how to make over $15,000 at a time. I ignored it because of course, I was skeptical. However, I didn't delete that email because something about it rang true to me, and I was desperate to know whether it was possible to make that amount of money in such a short space of time. By this time, I was even deeper in debt, and I had just about reached the point of despair. I finally realized that I had absolutely nothing to lose by having a go at the plan offered to me in that email. And apart from that, I just couldn't stop myself from thinking "What if it actually works ?"

Therefore, I put my doubts to one side and I went ahead and followed the simple instructions given in that email. It took me less than 30 minutes to complete and it cost me no more than $5. And yet, by the end of 2002, I was able to book the family holiday of a lifetime in the Caribbean, and I bought a brand new BMW with hard cash. Also in the autumn of 2003, I purchased a tidy condo in Florida for no less than $125,000. And yet, I don't owe a single cent to anyone!

To date, I have made exactly $376.855. My accountant has drawn up a cash-flow forecast in which he predicts that, within the next 18 months, I will become a millionaire just through this one business

alone. Even now as I write this, I find it strange to come to terms with the fact that, like most people, I've worked hard and struggled all my life just to "get by" and then something ridiculously simple drops into my lap and immediately turns my life around completely. When I think back to all the similar emails I had previously deleted, it makes me shudder, because now I know just how close I came to missing out completely.

What did it say in that email? Well, if you will read on, all will be revealed!

The business plan I am about to share with you works perfectly every single time. I've never made less than $15,000 from it on each occasion. Let me assure you that this is a LEGITIMATE BUSINESS OPPORTUNITY, a perfectly legal moneymaking enterprise. It does not require you to sell anything. It does not require you to speak to your friends, family or anybody else (unless you want to). In fact, you do not need to come into contact with any people whatsoever. Anyone with a pulse can become successful and make their fortune with this system. If you believe that "every dog has its day", then follow the simple step-by-step plan exactly as it is set out below. If you do this and this alone, I GUARANTEE that within the next 30 days you will receive over $15,000 in cash via your PayPal account. I know that this must sound like an outrageous claim, particularly if you've never had possession of this sort of money before, but believe me, this business works like nothing else you may have seen before in your life! By following the simple 3-step plan set out below, within a few short weeks your life will be transformed beyond all recognition! Please do not allow your initial skepticism to deprive you of certain financial success.

If you decide not to take advantage of this life-changing opportunity, I would like you to know that I sincerely respect your decision and I understand that you will have your reasons. I therefore wish you the very best of luck for the future. I am able to say this with absolute sincerity because, as you will see, if you decide to work this plan, I will not receive any financial compensation from you whatsoever. After all, I am sharing this system with you for free. However, remember life is short. Nobody has ever said that you can't have the financial freedom to do what you want to do, when you want to do it. But you must first pay the price. The price here is action; it's as simple as that! I'm very proud to be able to say that I've fulfilled my duty to my wife and children by securing their financial future in a very uncertain world, and I don't believe that any price is too great to pay for such peace of mind.

This is the CHEAPEST, FASTEST and EASIEST way to make
serious money online - PERIOD!

There are a lot of companies out there offering to put you in your own business, but I'm so certain you will make a SERIOUS INCOME with what I am going to tell you that I'm willing to roll up my sleeves and help

you begin - RIGHT NOW!!

Remember, I am not asking you to send me a single penny for the lucrative business project I am about to share with you. In addition, you will not be asked to buy anything or sacrifice your free time. You will make some fast and easy cash, using just a copy of this page and the simplest and most popular Internet payment system in existence!

You have most likely seen or heard about this project on TV programs such as 20/20 and Oprah Winfrey, or you may have read about it in the Wall Street Journal. If not, here it is below - revealed to you in step-by-step detail. This program is by no means new. It has been in existence in many forms for at least a decade. But in the early days, it required a lot more time and effort, as well as an outlay of a few hundred Dollars. However, thanks to PayPal and the Internet, the outlay is now virtually ZERO! And what's more, the entire process is FASTER, EASIER, and MORE LUCRATIVE than it has EVER been!

If you're already running a home business, you can easily do this one along with it. If not, this is the FASTEST and EASIEST way to earn serious money online that you've ever seen so far in the history of the Internet! This program works no matter what country you are in, or what currency you use. It doesn't matter how old or how young you are. And you certainly won't need any special knowledge or talent. You won't need to run a website (even though you certainly may), or make phone calls, or make photocopies, or send out letters through the mail, or pay for advertising, etc. The only things you will need are:
· An email address

· A Premier or Business PayPal account with at least $5 deposited in it

· Just 30 minutes of your time

This program takes just half an hour to set up. After that, there is absolutely no work whatsoever to do on your part. And yet, you will stand to gain many thousands of Dollars within the next few weeks from those 30 minutes of easy work! Yes, I know, it sounds too good to be true! I thought exactly the same thing myself until I actually tried it out!

Even if you are already involved in another program, stay with it, but do yourself a big favor and DO THIS ONE as well. You have absolutely NOTHING to lose, but you stand to gain a LIFE-CHANGING amount of money within the next few weeks! In fact, there is NO LIMIT to the amount of income you can generate from this one single business program!!

The facts are simple: If you need to make a few thousand Dollars REALLY FAST, then this program is the way to do it! It's the CHEAPEST, FASTEST, EASIEST, and MOST LUCRATIVE program you will ever participate in!

Please be sure to read all of this page . . . take your time, come back to it . . . go over and over it, you won't be sorry, I can certainly promise you that! If you don't have time to read all of this now, then save this email so you can come back to it later.

All you need is a PayPal account and an email address!
Just about everyone has heard about "PayPal" (if you haven't you will soon!) and when I came across this concept I knew it would work because, as a member of PayPal (an Ebay company), I had already experienced their efficiency and excellent standing. PayPal is the simplest method of making and receiving payments online that anyone has ever seen! Anyone with an email address can join for FREE! Once you have a PayPal account, you can send and receive credit card payments to or from anyone - anywhere in the world! Please read further before you go there... You can complete this whole process within just half an hour and you will NEVER forget the day you decided to do so!!!

NEED PROOF? Here are just 3 testimonials from the countless individuals who decided to invest nothing more than $5 and half an hour of their time to participate in this program:

"What an amazing plan! I followed your instructions just 3 weeks ago, and although I haven't made 15 grand yet, I'm already up to $9,135. I'm absolutely gob smacked."
Pam Whittemore , Ohio

"This is Lisa. Well, what can I say?... THANK YOU SO MUCH! I sent 40 e-mail's out like you said and then I just forgot about the whole thing. To be honest, I didn't really think anything would come of it. But when I checked my paypal account a week later, there was over $5,000 in it! After 30 days I now have over $11,000 to spend! I can't thank you enough!"
Lisa, NY,NY

"I was shocked when I saw how much money came flooding into my paypal account. Within 3 weeks my account balance has ballooned to $12,449. At first I thought there had been some sort of error with my account!"
Richard Barrie , Boulder,CO

Just a few months ago, each of these people were doing the same thing as you are at this very moment - reading this! But because they decided to follow the simple instructions given below, they are now considerably better off as a result. And there's no reason whatsoever why you can't share in this success. You've got nothing to lose, and EVERYTHING to gain!

Let's get started, just follow the instructions exactly as set out below and then prepare yourself for a HUGE influx of cash over the next 30 days! Here's what you need to do:

STEP 1
Ok, if you're not already a PayPal user, the very first thing you need to do is click on the PayPal link below and SIGN UP. It takes just 2 minutes! Here's the link:

PayPal

Please be sure to sign up for a free PERSONAL ACCOUNT (then upgrade to a free Premier Account) so that you can receive credit card payments from other people.

STEP 2
It is an undeniable law of the universe that we must first give in order to receive. So the first thing to do when you have your Premier PayPal account is to IMMEDIATELY send a $5 payment from your PayPal account to the FIRST email address in the list below, along with a note saying: "Please add me to your mailing list."
Be certain to add this note, as this is what KEEPS THIS PROGRAM LEGAL. Instructions on how to send a payment are under "SEND MONEY" at the Paypal site. It's so easy!! When you send your $5 payment to the first address in the list, do it with a great big smile on your face because "as you sow, so shall you reap!"

Here's the current list:

1. bcicebaby@msn.com
2. evalente@chartermi.net
3. jsmager@yahoo.com
4. heikkilaeric@yahoo.com
5. wfbathome05@yahoo.com

After you have transferred a $5 payment to the email address at the top of the list, something very eerie happens. It gives you an indescribable, overwhelming sense of certainty, belief and conviction in the system. You've just proved to yourself that, because you have done it, there must be a great number of other people ready to do exactly the same. Thus, you have now seen for yourself, first hand, that this business actually works!

When you send out your emails, your email address will initially be at Number 5 in the list. That's the best position it can be in at this stage if you want to make serious money. The response-rate for this program is much higher than any typical email marketing campaign for a number of reasons, which are explained later. As long as you send your emails to people who are likely to be interested in this program, on average, you can expect a response from about 25% of the people you send to. But let's be extremely conservative here and assume that you receive an average response rate of only 12.5%. . .
If you send out your email to 40 different people, you can expect at least 5 of those people to do exactly what you did (12.5% of 40 = 5). By this time, your email address will have moved up to Number 4 in the list, and this list will now have reached around 200 people (5 x 40). Out of those 200 people, you can expect at least 25 of them to participate (12.5% of 200 = 25), so that's a further 1,000 emails (25 x 40) being sent out and your email address will have risen to Number 3 in the list. Out of those 1,000 people, you can expect at least 125 of them to participate (12.5% of 1,000 = 125), so that's a further 5,000 emails (125 x 40) being sent out with you now at the Number 2 position.

Out of those 5,000 people, you can expect at least 625 of them to respond (12.5% of 5,000 = 625), so that's 25,000 emails (625 x 40) being sent out with YOUR ADDRESS at the Number 1 spot! Now out of those 25,000 people, you can expect around 3,125 of them to respond (12.5% of 25,000 = 3,125). And since you will now be at number 1 in the list, you will receive: $15,625 ! (3,125 x $5)

STEP 3
Once you've sent a $5 payment to the address at the top of the list (along with your note) "Please add me to your mailing list", this is very important!, you will need to confirm your payment by sending an email directly to the top position along with the message "I have made my transfer to your pay pal account, please send me the final informational step."

This not only keeps the whole program honest and legal but the information alone is worth much greater than your $5 dollar investment. Keep in mind that you will be at the top position in a very short period of time so it is important that you gain a full understanding of this powerful system so that it easily duplicates to the other participants. You will gain information on:

1) How to obtain a website for free. (just like this one)
2) All of the information on how to set up your money making website.
3) How to reach your target market.
4) The 4 factors that make this program successful.
5) The unlimited income potential and much more!!!

The Bottom Line:

Ham Op's in general and the Hamvention Committee
and the DARA has yet to grasp that timeless law of
Business MBA called: "The Law of Diminishing Returns".

CBC Radio reported on it this morning. Having four thousand people lose their income really hurts. They should just can the head honcho for incompetence and use the money to pay wages.

mike

They did find excess aluminum in the brains of some Alzheimers patients - in the substantia nigra where the characteristic neural tangles occur. There was some trouble replicating the finding, and of course finding it doesn't necessarily imply cause.

Excessive alcohol (coupled with thiamine - vitamin B1 - deficiency. I heard the Aussies fortify their beer with it for prevention) can bring on Korsakoff's disease. With all the confabulation in this NG, I'd say a few have developed one of the other.

Sorry to hear about the BBC. I'm still trying to figure out how Tucker
Carlson replaced Bill Moyers on my beloved PBS...

Nope, sold em all.. I no longer play.

A lapse on my part, simply listening to some old recordings trying to conjure up
the past, but the past is indeed behind us all.

Went ahead and ordered the 1003 this morning.
Looking forward to it, since the only radio I've been using for several
years
is an analog am/fm sony cassette walkman.
Have gotten real fond of listening at night.
Art Bell comes on too late here, 1am and I get up at 4am.
Had quite a time finding one, there were only 3 left on ebay, price was
high.
Didn't want to fool with the chinese version.
Universal was out for next 2 months.
And most places were at $100 or thereabouts. CC Crane I think wanted $109.
So I'm happy to have found one for $86 shipped.
Most money I spent on a radio ever, but figure it should be enough for
a casual listener and if we get storms, then we don't have to listen to
storm news all the time.

BBC on 9825 at 0200 (from Ascension to SAm) very noisy and hard to hear over the last week or so. I know it's not directed to California, but nevertheless it usually comes in S9 and audible. Over the last week I've been lucky to get an S5 (and noisy) signal level. I noticed that The World Today sounded different on Sunday night (Monday morning UTC) but I couldn't hear it well enough to make out what they were saying. Has there been ANOTHER strike at the BBC?

Nederland lists "Petro-Kam" as the site on their card. This is, of
course, Petropavlovsk-Kamchatsky. If you have issues with the way
they list it on their QSL, please address it to them. That's beyond
my control.

I'm sure they'll entertain your perfectionism a lot quicker than I
will. You're on your own for links.

You "officially gave up" too easy, or must have been desperate to
provoke something. Sorry it didn't work out.

Sir:

I think you miss the point of AFN. It is for and by military members.
It was not intended for the civilians to listen to, nor does it cater
to them with the exception of government civilians and dependents.
The PSAs that AFN runs are intended for the military under military
scenarios.

The welcome desired from current residents was for military
communities on bases in the US and OCONUS. Does not the CFBS or the
BFBS provide the same programming? From my service time with the
military, I have found that they do.

You need to realize that AFN is not out to entertain *you.*

Drive through please.

2063. New PNG shortwave station on 7120 kHz

Newsgroup: rec.radio.shortwave
Date: 2005-05-24 02:34:24 UTC
From: Tebojockey <tebojockey@secure-tunnel.com>
Message-ID: <sk3591d3m604luh5sr9pnc6dse68qid918@4ax.com>
Source record: 22546

Papua New Guinea Christian Broadcasting Network has commenced operations on 7120 kHz. Heard here in the CNMI with thunderous signals at 1012 UTC 5/23 with a local police inspector talking about the disciplinary measures which can be taken against constables (wierd!). Lotsa christian C&W music and pidgin announcements and music. ID's as Wantok Radio Light, and 93.9 FM. Made many mentions of 7120 serving the nation and read names of people who were calling in with repots. Put several of them on the air.

WRTH 2005 said this was a future planned operation between HCJB and some other organization. Planned power was said to be 100kW. This seems likely as the strength is the same or better than the 4890 kHz powerhouse with 100kW.

Operations seems to be 24x7, but may be erratic as this is a start up. Good luck in hearing them, and I am already waiting on my QSL!

Source record: 22700

R. Altura in Cerro de Pasco, Peru heard 5/21 on 5014.4 kHz with a fair signal at 11.30 UTC. Seemed to be some sort of political thing going on because the programming was subdued and serious with talk about the economy. Even the IDs were quiet and not as flamboyant and boisterous as most latin stations. Heard every night since but with regular programming including music and echo IDs. Nestled snugly between the Solomon Islands and WWVH/BPM.

PAPUA NEW GUINEA 7120, 0830-1200, Wantok Radio Light, Port Moresby May 23
TENTATIVE reception of this new PNG Christian outlet first noted with
religious-sounding music fading in at 0830. Four musical tones noted at
0900:20, followed by possible ID by woman. Signal improved very slightly
past 0900, with continuous Christian contemporary and possibly PNG church
music. The language sounded Pidgin at times, but was much too weak for
positive language identification. At 1101:38, I heard a distinctive 'Bird of
Paradise' call (national bird of PNG, I believe). An MP3 recording of this
can be heard at: http://www.guyatkins.com/files/tentative_WRL_7120kHz.mp3
0830 UTC is just past Port Moresby sunrise, so a darkness path makes a
difference on this frequency to the West Coast USA (and as predicted by the
propagation module within ERGO). (Atkins-WA)

Sorry... the URL for the short audio clip should be:

http://www.guyatkins.com/files/tentative_WRL_7120khz.mp3

I'm not *that* familiar with the Bird of Paradise call. Maybe this is just a warbling siren, and I'm just being too DX-hopeful!

I'll be checking 7120 kHz the next few evenings, as well as during a coastal DXpedition to Grayland on June 10th and 11th, which happens to be during the Radio Wantok Light dedication ceremony.

Well, these radios are all Chinese-made, but some of the American distributors are offering them under the Kaito badge with the 120 V AC adapters; plus it's easier to return them to the seller here in the USA in the unlikely event you'd get a defective piece. The $86 is about as low as I've heard of for an American distributor's price. I bought mine from Liypn off eBay for about $45 or so bucks... a great deal, even with relatively high shipping of $20 (from China)... and it only took a week for delivery to my address. Hope you enjoy your 1103, I certainly do! It is a nice portable... nothing else is even close in this price range for the features/performance.

First time for me. I don't know if I've been missing them, or they've
been on an alternate freq (this one is always supposed to be on) or
whether the King had everything clamped down.

I'm hoping for their QSL here in awhile. Bhutan's QSL is still
outstanding. The delay in receipt always seems directly proportional
to the rarity of the station! You've done well to get them QSL'ed
twice!

Guy, I believe you heard the regional police program that was hear in
my report also posted in here. The programs starts off with a long
police siren, and when I heard it, the inspector running the show was
telling everyone about the various disciplinary measures used against
constables accused of misdeeds.

During the time I was listening, I heard no bird calls, but lotsa C&W
christian music and the female announcer saying hi to all the people
calling in saying they could hear the program.

I am not sure about that one. In the 7 line, Drake used Motorola TO-92 devices. I think that the ones that they are using now should be fine. The R8 is a good receiver "right out of the box".

Then that's most likely the Bird of Paradise. There are a couple of species and they all have bery unusual calls. Nothing like birds over here.

I have seen people use them but an Astron is much better. Also,
If you look around on ebay and QTH.com and QRZ.com you can usually
find a 20 amp for around $40 - $80 , with or without meters, in good
working order.
20 amp might be over kill for you now but it will last forever! Even an
Astron 12 amp would be OK for receivers.
These supplies will run forever without a light receiver load. I have
an astron 50 amp supply that has been on since 1985!!!!!
Remember, you only want to buy a supply one time. If the one you get
is just enough
for your needs today, what happens when you get a few more pieces next
year and now your supply is
too small?
Have fun!!!

I did QSL Bhutan with a prepared card which they signed and stamped. At the time I also included a self-addressed envelope. That was back in 1989 on 5023.1 when they were running 10 kW.

Oh great! That used to be a good frequency to operate by day in VK, now it
is clobbering a 10khz chunk out of existance. The 7100-7150 segment was
supposed to be cleared of broadcasters and now this comes along.

Hi there - ive got a Sony ICF-7600GR shortwave radio and was looking at a way to improve my reception (pick up more comms and stuff) - i was wondering if a longwire antenna made from Phono wire would do the job - and then just clip the phono onto the antenna with a crock clip ;-)

Any ideas?

Cheers

Wire is wire... just don't overdo the length going to that portable or you'll possibly overload it, a common problem when trying to attach a longer antenna.

POS
I have seen several and even the linear ones are way too noisy.
Go with an aston.
Even a returned unit could ber a very good deal.
Lot's of items are returned that have no problem

I wouldn't hesitate to go for a factory refurbished supply.
If you can afford it, spring for meters. It is nice to be able
to look at the voltage adn currentmeters every now and
then just to check that things are normal.

I had an old Clegg rock bound 2 mtr rig that started drawing
about 2 amps on squelched receive. The amp meter showed
me an unexpected load, so I was able to catch a minor problem
before it became a big one.

OK thanks for the heads up. Some reviews were good but they are too cheap and I never heard of them either.

Well I cancelled the refurbished one. I'm not paying $58 {shipping and taxes} included for a fixed one. In that case I take a chance on Ebay for much less.

Heck an Astron RS-10A went for $22 yesterday. OK this is the story I hear on looking for newer Astrons. It seems if the power cord is able to be disconnected from the PSU, it is a newer one. They went in this order from older to newer.

1] oldest is the PSU's with undetachable power cords with the fuse built into the radios circuitry. You can't see the fuse or access it unless you open up the radio.

2] PSU's with undetachable power cords with a screw in type fuse seen on back of unit.

3] The newest is the power cord is detachable and the small glass fuse is in back of the radio but it's in the radios powercords receptacle. If you can get a closeup of the powercords jack, you will see a tiny picture of a fuse right above the jack. It can be changed from the outside.

One with meters is not a bad idea. I'm still looking. I see an Astron with no crowbar protection but it has a screw in type fuse and I woud be using a surge protector anyhow. I read the worst that can happen with no crowbar OVP, is that the full output voltage can occur during a short.

So it doesn't seem too bad if you have a
a PSU that's maximum output is 15v and you don't have crowbar OVP. The most your receiver can get hit with is 15v if I am right in my interpretation of the crowbar protection failing. It does have a fuse that will blow from any heavy surges.

What do you think? Crowbar that important if you have a fuse??

Lucky

news:KaDke.121$HP1.15@fe08.lga...
I have seen people use them but an Astron is much better. Also,
If you look around on ebay and QTH.com and QRZ.com you can usually
find a 20 amp for around $40 - $80 , with or without meters, in good working order.
20 amp might be over kill for you now but it will last forever! Even an Astron 12 amp would be OK for receivers.
These supplies will run forever without a light receiver load. I have an astron 50 amp supply that has been on since 1985!!!!!
Remember, you only want to buy a supply one time. If the one you get is just enough
for your needs today, what happens when you get a few more pieces next year and now your supply is
too small?
Have fun!!!
==========

I wouldn't hesitate to buytheon you mention. But I don'tknow what
your electronic skills are. It could be a very good deal, or a boat
anchor.

Take a look at the diagram in the 2nd link and decide if you could
rebuild one. The transformer, caps, and heatsink are the expensive
parts. If you have those repair is easy and fairly inexpensive.

But there is something to be said for a brand new, and under warrenty
item.

Terry

How good are the Pyramid PSU's??

Lucky

So I'm to assume the more amps you have, the longer the PSU will last??ThanksLucky

Yep, my slipup, DXace. I should have typed "sunset".

BTW, no trace of Wantok Radio Light heard this morning. I did spot checks of the recordings every five minutes from 0700-1500 UTC, and only had a threshold signal there. It could have been anyone; no clues that it was this particular station.

When you say "overload" what do you mean? - do you mean that because
the wire is so long it will not be able to differentiate between two
signals? - i just want it to go around a room and the around a window -
whats a good length?

Cheers

Source record: 22741

Most linear supplis have about +20V before the "pass element",
transistors.

And if a transistor shorts C to E, then ~+20V will appear at the
+12V output. A good OVP/crowbar is a must have!

But if an otherwise good supply lacks an OVP I would add my own.
The first link I gave has a diagram for a very good, in fact better
then
any I have ever seen built iinto any PS. The Areotech diagram specs 1%
resisitors. I used 5% with no decrease in functionality. Given the
orignal
use was to be in aircraft, the slight performance edge offered by 1%
ressitors was well worth it, that is a "life critical" mission. While I
value
my radios, I am more then willking to settle for a little less absolute
performance. I built the first one with teh specified 1% resisitors,
I built another unit with 5% resisitors, and as far as I can measure,
they both trip in about ~50mS. That is 0.05S. Thats for a jump of
13.69V
to +20V.

I use 13.69V because that is the most commonly suggested voltage to
keep lead acid gell cells "float charged". I added a 120V AC relay to
lift,
open, the + output from the PS so during power failures, my radios
keep running.

And as a rule, the larger a supply, the cooler it runs, and cool
equates
to LONG life.

Terry

Thats a good price, the few left on ebay were $89.

Hope you enjoy your 1103, I certainly do! It is a nice
>> portable... nothing else is even close in this price range for the

Ok I see. I'm good with my hands, can build a computer with ease, have done lots of soldering, but when it comes to mission critical items like a PSU that could end the life of one of my radios or cause a fire, I don't trust in myself enough to do it. But, I learn very quickly. If I were to be there with you, and watch you do it once, I could repeat it.

Funny how all these wall worts we use for our radios have none of these features or protection. Or even are regulated. But, it's very important to

know. Using a simple Radio Shack regulated PSU got rid of the hum that was driving me batty on my HF-150.

BTW, linear = regulated correct?

Lucky

THE MOST IMPORTANT QUESTION OF YOUR LIFE

This is the most important question of your life.

The question is: Are you saved?

It is not a question of how good you are, nor if you are a church member, but are you saved?

Are you sure you will go to Heaven when you die?

The reason some people don't know for sure if they are going to Heaven when they die is because they just don't know.

The good news is that you can know for sure that you are going to Heaven.

The Holy Bible describes Heaven as a beautiful place with no death, sorrow, sickness or pain.

God tells us in the Holy Bible how simple it is to be saved so that we can live forever with Him in Heaven.

"For if you confess with your mouth Jesus is Lord and believe in your heart that God raised Him from the dead, you will be saved." (Romans 10:9)

Over 2000 years ago God came from Heaven to earth in the person of Jesus Christ to shed His blood and die on a cross to pay our sin debt in full.

Jesus Christ was born in Israel supernaturally to a virgin Jewish woman named Mary and lived a sinless life for thirty-three years.

At the age of thirty-three Jesus was scourged and had a crown of thorns pressed onto His head then Jesus was crucified.

Three days after Jesus died on a cross and was placed in a grave He rose from the dead as He said would happen before He died.

If someone tells you that they are going to die and then three days later come back to life and it actually happens then this person must be the real deal.

Jesus Christ is the only person that ever lived a perfect sinless life.

This is why Jesus is able to cover our sins(misdeeds) with His own blood because Jesus is sinless.

The Holy Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you would like God to forgive you of your past, present and future sins just ask Jesus Christ to be your Lord and Saviour.

It doesn't matter how old you are or how many bad things that you have done in your life including lying and stealing all the way up to murder.

Just pray the prayer below with your mouth and mean it from your heart and God will hear you and save you.

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven with You when I die. I agree with You that I am a sinner. I believe that You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins and that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thanks Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

Welcome to the family of God if you just allowed God to save you.

Now you are a real Christian and you can know for sure that you will live in Heaven forever when this life comes to an end.

As a child of God we are to avoid sin(wrongdoing), but if you do sin the Holy Bible says, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One."

Those of you that have not yet decided to place your trust in the Lord Jesus Christ may never get another chance to do so because you do not know when you will die.

Jesus said, "I am the way, the truth and the life: no one
can come to the Father(God)(in Heaven), but by me."
(John 14:6)

This means that if you die without trusting in Jesus Christ
as your Lord and Saviour you will die in your sins and be
forever separated from the love of God in a place called Hell.

The Holy Bible descibes Hell as a place of eternal
torment, suffering, pain and agony for all those who
have rejected Jesus Christ.

The good news is that you can avoid Hell by allowing
Jesus Christ to save you today. Only then will you
have true peace in your life knowing that no matter
what happens you are on your way to Heaven.

Praise the Lord!
Servant of the Lord Jesus Christ

Source record: 22851

Wall warts can only deliver so many ma, or for big ones an amp or 2.
A real power supply can deliver well over it's rated current for a few
seconds.

Long enough to turn most radios into slag.

Go with one with a built in OVP/crowbar and try building an
out board one later. In a extened power outage you might find it
usefull to be able to draw power from you car or truck. At that
time you really want to have a OVP/crowbar between your radios
and vehical's electrical system.

Flexiblility is important.

You might want to contact the alarm companies in your area as many
of the better ones retire perfectly good gell cells from alarm systems
for insurance reasons. Having a burgler alarm fall during a powqer
outage because a 3 year old gell cell died is real bad for business.

I have several gell cells that are 10 years old and going strong.
After overcharging them, heat is the biggest killer, keep them cool,
under ~90F, and they will last for years. Here in central Kentucky
we often have nasty T-storms that knock the power out for several
hours. It is very nice to be able to listen to my radios after the
storm
moves out. It is true that I mainly listen to my scanners, but having
a SW is very nice also.

One winter's night 2 years ago the lights went out and stayed out for
about 5 hours. Perfect listening conditions. No nearby TV,s PCs etc.
Very RF quite. Made the extra effort for the gell cells worth while.

Terry

2124. Re: Phono Wire as an antenna?

Newsgroup: rec.radio.shortwave
Date: 2005-05-24 17:25:28 UTC
From: "John S." <hjsjms@cs.com>
Message-ID: <1116955528.440773.27760@g14g2000cwa.googlegroups.com>
Source record: 22858

Run some wire around the perimeter of the window held in place with small suction cup hooks. The length isn't critical, but as DxAce said too much antenna and you will flood the receiver with signals. A wire antenna isn't particularly selective, and it will pick up all signals more or less equally. So Radio Havana will come in nice and strong, but so will static crashes and hash from a nearby computer or tv.

Modern portable receivers are quite sensitive and they pick up a lot with just the built-in whip antenna. Unless you are inside a steel frame building that radio should hear lots of shortwave broadcasts and ham stations with just the whip.

2131. Re: Astron Power Supplies Questions

Newsgroup: rec.radio.shortwave
Date: 2005-05-24 19:03:42 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <42937A9A.4994@mindspring.com>
Source record: 22866

I run everything off a SS-18 (R8B and 30 ANC4's DA100E's and DSP's). I tried a RS-7A but didn't like the heat it throws off. The switching supply avoids that.

I fuse the output at the supply with an inline fuse (reflecting the wire gauge), and fuse each device separately with like 1/4 or 1/2 or 1-2 amp fuses where I distribute 12v to them all. A properly working power supply can easily burn up the light wires running to these things if you don't fuse it, where the internal resistance of wall warts had prevented it before you went to a central power supply.

There's some birdies from the SS-18 but they're not bad; and I put the thing in the basement and run the 12v to the first floor, so there's some distance intervening as well. It does run enormously cooler.

I was motivated to get the central 12v by the heat the R8B's supply throws off, that is now eliminated, as well as the growing number of wall warts I was accumulating as I added to my phased array.

The family is apparently from Pakistan (or at least one of the parents is). In Muslim cultures, the male is the absolute authority in family matters, and whatever he says must be accepted without question. So if Dad says to wrap the house in aluminum foil and sheet metal because the neighbors are beaming messages into his head, the rest of the family says "yes, sir" and does it. Then again it's possible that they're ALL loony, and that Dad and Mom have passed on their mental illness to the kids, and that they all think that they're being hit with radiation.

FireArm,

Yes - Clipping a single piece of Phone Wire on to the Tip
of the Whip Antenna will work.

The better Idea may be InDoor Loop Antennas :

Try taking a single piece of Phone Wire and form it into an
Around-the-Ceiling Loop Antenna. You will create an InDoor
Horizontal Loop Antenna between 32' - 44' long.

Or taking a single piece of Phone Wire and form it into an
On-the-Wall {Inverted} Delta Loop Antenna. You will create
an InDoor Vertical Loop Antenna between 24' - 36' long.

>From where the two wire ends that form the Loop meet; Twist
the two wire ends together to form a Twisted Pair of Wires
to extend to the Radio.

Connect the Two Ends of the Twisted Pair from the Loop Antenna
to a 1/8" Mono-Plug. Plug the 1/8" Mono-Plug into the Radio's
External Antenna Jack.

> http://www.thekcrachannel.com/news/4512146/detail.html

1. Years ago, we had a CBer in the neighborhood that had plywood shutters over all the first floor windows, with tiny tank style openings to see from. It is believed that this individual was a habitual jammer on CB. He was even astute enough to bring the coax out of the second floor wall, thereby reducing the likelihood that anyone would "pin" or cut the wire.

2. Eyesores, beauty is in the eye of the beholder. Whether the people are lunatics or not, what they do on their property is their concern. I don't hold to the theory of regulating how another person's property looks. Increasingly, zoning has gone from control of significant differences in real-estate to anal control over the permissible length of a blade of grass or whether or not an Amateur Radio Operator can install an antenna.

We have a lunatic Nazi enforcer of borough laws next door. When we moved into this house (my wife's house from childhood), the lady next door, the Borough Council vice president, proceeded to tell me that I should cut down this tree and that tree and all the trees on the property. (therefore she would not need to rake leaves). I didn't listen. Another time she was obsessed with the small roll of cable that I left below my Direct TV antenna. It was not bothering anyone but her. My son bought a car to fix up, and it was not licensed. When my wife and I went away for the weekend, my son called us to tell us that the police had driven up onto our property and ticketed the car as abandoned. It was on our property. The idiot next door believed that this would rid the neighborhood of the car, but my wife out maneuvered her. We had the car licensed with Classic car plates and obtained insurance for it. So there it remained, in the same spot, still an eyesore to her, but a legal eyesore.

If it isn't dangerous, (e.g. rat infested or poses a safety problem to others), I say leave them alone. A rose is a rose by any other name. My lunatic neighbor has fine looking property, but she is a nut case that makes living here difficult at times. Others are not so pristine, yet much easier to live with. The lunatic neighboors in the link above will still be lunatics when the steel panels are removed. Is it fair to allow someone else to move into the neighborhood under false pretenses?

2137. Broadband Over Powerline

Newsgroup: rec.radio.shortwave
Date: 2005-05-24 21:26:58 UTC
From: "helmsman@mindspring.com" <helmsman@mindspring.com>
Message-ID: <sv679152pittrrjgc4r7m2f6isblhnq9co@4ax.com>
Source record: 22872

Motorola today announced the introduction of a wireless to low-voltage Broadband Over Powerline (BPL) solution, Powerline LV (Low Voltage). Powerline LVi¿½s introduction to the utility industry was made during the United Telecom Councili¿½s i¿½Telecom 2005i¿½ Expo in Long Beach, Ca.

Powerline LV unites Motorolaï¿½s Canopyï¿½ Broadband Internet Platform with enhanced HomePlugï¿½ technology to provide an end-to-end Broadband Over Powerline solution for the utility market. The first wireless to low-voltage solution for widespread commercial use, Powerline LV combines the Canopy platformï¿½s reliable high-speed Internet service with the lower-cost and non-invasive benefits of a low-voltage BPL option.

By operating the Canopy HomePlug system on low-voltage powerlines, Powerline LV is significantly less susceptible to interference. Motorola developed a solution that does not use medium-voltage wiring, greatly reducing high-frequency (HF) interference. Motorola also integrated true radio-frequency (RF) notch filtering, providing additional protection for amateur radio transmissions.

Tell us that you think?

Dear Troll,

Thank you for your troll. Your troll has been evaluated by
our panel of experts. Here are the results of our tests.

We found that your troll was...
[ ] Grammatically incorrect
[ ] Incomprehensible
[ ] Just plain stupid
[ ] Laced with spelling and punctuation errors
[ ] Laden with circular reasoning
[ ] Offensive
[ ] Somewhat too revealing of your minimal mental abilities
[ ] Too similar to other trolls submitted in the past
[X] Without merit

Please get a...
[X] clue
[ ] grip
[ ] job
[X] life
[X] note from your mom

You should...
[ ] Get your ego boost some other way
[X] Go away
[ ] Have someone who can read review your postings
[ ] Not have "one for the road" next time
[ ] Put up a web site with your name on it to show the world
[ ] Realize that by trolling a group you hurt everyone, not just the
people you are mad at
[ ] Save your postings for later and think if you really want to send
them
[ ] Stay in school
[ ] Take down your web site, it's not very good
[X] Take your medication

[ ] Think about other people's feelings before you post

Suggested other activities besides trolling...
[X] Consider another hobby
[ ] Get your ego boost instead by helping out at a local hospital
[ ] Helping someone else
[ ] Posting something constructive
[ ] Spending some time with your family instead of your magazines

Thank you for your submission.

You have...
[ ] failed, must try harder
[X] failed utterly, without hope of redemption.
[ ] passed
[ ] passed with honors

Many people have improved there reception somewhat doing exactly what
you describe. The type of wire is not that important, but thin and
flexible is easirr to work with. Many say that wrapping several turns
of the wire around the antenna works better than clipping it on, others
disagree with that. Experiemnt. Try a length of wire about 21' long
for starters.

Overloaded means that the strongest signals you can normally
receive will start appearing at several places on the dial besides in
their correct location. There, they will wash over several freequencies
above and below that. A classic case of "too much of a good thing".
It's the weaker signals you are frequently after! You need a longer
wire for picking up weaker signals - until it gets long enough
(especially on small portables) to start "overloading" the front end of
the tuner.

Tony

My sentiments exactly Ernie. This ass is posting daily it seems.

I was afraid to put it exactly in the words that you did. You never know,
he might have his god turn me into wine and drink me or something.

I always thought how cool it could be to have some dude turn water into my
favorite alcoholic beverage. This Jesus guy would be a plast at parties.

JESUS CHRIST! we're out of beer. He comes over and does his little magic
trick. The the whole party is saved!

.....
.....
--I know, I know, just report him. Don't feed the trolls. Etc, Etc. I
couldn't help myself this time.

www.rnw.nl

The web site has sort of a kooky layout, but click around a while and
you'll find freqs. I doubt it lists transmitter sites however, and on
the English language site you'll only find English language
transmissions. Passport is helpful in both respects, although by now the
2005 edition is probably somewhat dated.

Yes, zoning has gotten out of control. 1950s zoning patterns have become locked into place. If you have any question about the appropriateness of suburban zoning, a visit to South LA should clear up any doubt. Cities with mixed zoning and that lack vast parking lots, such as New York and San Francisco, are widely recognized as being more livable and better for human health (physical and mental) and the environment. Yet 1950s suburban zoning persists, creating ever wider rings of suburban ghettoes that have become "unfashionable" because of smaller homes and older shopping centers, leaving them to the poor and desperate while whites expand cities ever further out in order to get away from the encroaching destitution. Places that figured prominently in the 1992 LA riots, such as Inglewood, were fashionable whites only middle class suburbs 50-60 years ago.

Theoretically, since the front yards are unfenced in this neighborhood
and according to TV reports the sheet metal was just propped up (not
secured) it COULD fall onto a kid who wanders into the yard for a closer
look. I suppose if that happened the parents would sue the city. So
there could be a logical reason for being so anal.

running dogg <run@ning.dog> wrote in
news:4293d984$1_2@spool9-west.superfeed.net:

Not only do the trees supply oxygen that the neighbor no doubt uses, but they dampen the ludicrous 1000 mile an hour winds that we get here. I have never seen anything like it, you can go to the front of the house during a storm, all seems reasonable, yet go to the rear of the house, sheesh, you're looking for the tornado. Without the trees I would imagine that the wind's effects on my house and the house of my neighbor would be much worse.

This woman is definitely no tree hugger. Some people obsess about leaves on the ground, I obsess about leaves on the tree. I lived near Frederick Maryland years ago, and they had a sterile park, nice grass, but no trees. In Hagerstown Maryland, their park was older, we would go there to enjoy the afternoon, trees galore.

I saw the picture of the sheet metal, and I could see how some people might be concerned, especially if it may pose a safety hazard. This aside, have you seen some of the modern sculptures in some cities, the one in Downtown Pittsburgh looks more like a plane wreck than anything else. If the city desires this, they shouldn't be obsessed with peculiarities on people property, as long as it is safe.

Regards,

Dr. Artaud

2158. AGC Design?

Newsgroup: rec.radio.shortwave
Date: 2005-05-25 03:08:51 UTC
From: Tom Holden <holden_family@sympatico.ca>
Message-ID: <8%Rke.6363$dZ5.579272@news20.bellglobal.com>
Source record: 22892
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.shortwave

I'm looking for some advice/guidance on the design of AGC detection and timing circuits, prompted by some level of frustration with a modification I have been doing to a DX-394 SW radio. My questions, though, probably apply to receiver design generally. I have a problem with stability - the receiver gain oscillates at medium and fast release speeds.

Previously I had done a mod that pretty successfully provided 3 release speeds for the DX-394 but fell short of what I thought was the ideal: an attack time of ~1 millisecond, independent of the release time. That was based on a survey of receivers from which I concluded that the attack should be less than 13 ms and that 1 ms seemed to be the goal. Release speeds should probably be on the order of 30ms, 300ms and 3 seconds, for fast, medium and slow, respectively, although there seems to be lots of scope for subjective preference. My mod required a rather large capacitor for Slow release so my Slow was more like 1.2 seconds and the attack was slowed to maybe 50-70 ms for the slow release..

The objectives of the enhanced mod are to:
a) improve the attack speed to better less than 13ms for all release speeds
b) extend the Slow release using smaller cap
c) reduce the loading of the AGC detector on the output of the 2nd IF amp and also possible distortion due to the AGC and AM/Product detectors fed in parallel

I used a JFET to buffer between the IF amp and the diode detector and an emitter follower between the attack R-C circuit and the release R-C circuit, dc coupled to the stock AGC amplifier. On the release side, about 1/10 the capacitance vs the earlier mod is required for slow release and the attack does seem to be similarly less affected by the release network.

However, at the fast and medium release settings, the receiver gain literally oscillates at a rate that seems to be a function of attack and release time constants, manual RF/IF gain setting, AGC gain setting and signal strength. The depth of this gain modulation is affected by AGC and RF gain. In order to get stability, it seems that I have to slow down the attack (and/or release) time constant and carefully tweak the AGC gain between the onset of oscillation and receiver peak distortion caused by not enough gain reduction.

Have I completely misunderstood the meaning of attack/release speeds? My 'ideal' attack circuit has a R-C time constant of 1 ms, which means it will even respond substantially to 1kHz modulation. That seems high. The R-C time constant for my target fast release of 30 ms means that it will substantially follow a 30Hz signal. I have had to pad these out to ~20ms attack, 50ms release for stability or tolerably low gain oscillation depth

at medium and lower signal strengths. With this slower attack, stability is much improved with the 500ms medium release speed.

The target attack/release of 1ms/30ms is not good for AM reception anyway as it causes considerable distortion on heavy bass modulation - it is for data services on steady carriers, e.g., PSK, FSK, DRM. But if the AGC causes oscillation, then that's interference of another kind that would adversely affect error rates. Several, including myself, have noted that DRM SNR is improved by defeating AGC, on a wide variety of receivers.

Is this a typical problem for receiver design? Would 'hang' AGC stabilise the AGC loop? Are my design objectives reasonable?

Comments from experienced radio designers/builders/experimenters much appreciated.

Tom

And here friends, for your reading enjoyment
is an excellent example of the core group
of Red State xian Bush voters who 'hate Islam
but love Islamics.......' :) :) :) ENJOY! (story below)

Let's see now if this event precipitates another near-insanity atmosphere
amongst the masses of the populace in Iraq and elsewhere
along with a healthy new round of IED and Car Bomb events
directed at US personnel in the region eh...? Thanks you supremely
ignorant Bible-Belt A-H's ! Praize da Laaaaawd!!!

I wonder if this have shown up on Al Jazeera yet?

---------- cut ----------

http://www.thedigitalcourier.com/articles/2005/05/24/news/news01.txt
By JOSH HUMPHRIES Daily Courier Staff Writer

FOREST CITY NC -- A sign in front of a Baptist church
on one of the most traveled highways in the county stirred
controversy over religious tolerance and first-amendment
rights this weekend. A sign in front of Danieltown Baptist
Church, located at 2361 U.S. 221 south reads "The Koran
needs to be flushed," and the Rev. Creighton Lovelace, pastor
of the church, is not apologizing for the display.

"I believe that it is a statement supporting the word of God and
that it (the Bible) is above all and that any other religious book
that does not teach Christ as savior and lord as the 66 books
of the Bible teaches it, is wrong," said Lovelace. "I knew that
whenever we decided to put that sign up that there would
be people who wouldn't agree with it, and there would be
some that would, and so we just have to stand up for what's right."

Seema Riley, a Muslim, who was born in Pakistan and
reared in New York, was one of those upset by the sign.
She moved to Rutherford County for the "small town friendly"
atmosphere, she said. When she saw the sign on the side
of the highway Saturday she felt angered and threatened.
"We need a certain degree of tolerance," said Riley.
"That sign doesn't really reflect what I think this county is about."

She said that according to Islamic faith, a follower does not
even touch the Koran without going through a ritual cleansing.

Muslims believe the physical book to be a sacred item that is treated with respect and reverence, much like the image of Jesus in Christianity, according to a report on National Public Radio. (NPR) "For someone to put that sign up -- the person just didn't understand -- didn't take into consideration what putting up that sign means," said Riley. "I don't think it should be posted on a sign in public viewing on the highway to create a hostile environment for me."

The appearance of the sign follows a national news story from last week. Newsweek magazine retracted a story reporting that military guards at the U.S. prison at Guantanamo Bay flushed a copy of the Koran down the toilet during interrogation of a detainee. The Newsweek story sent Washington in a frenzy and was blamed for igniting Muslim riots and deaths abroad, including a particularly violent outburst in Afghanistan.

"Our creed as a Christian, or a Protestant, or a Baptist church of course we don't have a creed but the bible but we do have the Baptist faith and message that says that we should cling to the 66 books of the Holy Bible and any other book outside of that claiming to know the way of God or claiming to be God's word is automatically written off and is trying to defeat people from the way of true righteousness inside of our viewpoint in how we view the word of God," Lovelace said.

"Putting such a sign in a public place is an un-American example of intolerance, of aggressive disrespect for other citizens' deeply held views," said Donald Searing, Burton Craige Professor of Political Science at the University of North Carolina at Chapel Hill. "This is the sort of attitude and action that seriously endangers the liberty which lies at the heart of our democracy. It is also a good reminder that just because one may have the legal right to say something, doing so may not be morally, socially or politically desirable."

When Lovelace was asked whether he considered before he put the sign up that there may be some consequences or that some people may be angered, he said he was aware of the likelihood of angering some people. "Well, I thought about it and I said there may be people who are offended by it but the way I look at it, Jesus told his followers that if the world hates you, don't feel bad because they hated me first," said Lovelace. "If we stand for what is right and for God's word and for Christianity then the world is going to condemn us and so right away when I got a complaint I said 'well somebody's mad, somebody's offended, so we must be doing something right.'"

Danieltown Baptist Church belongs to the Sandy
Run Baptist Association and the association's
Director of Missions the Rev. Jim Diehl said that
Lovelace's opinion does not necessarily reflect that
of that organization. "Each of the churches of the
Sandy Run Baptist Association are autonomous bodies,"
said Diehl. "Each church can develop a stance on
doctrinal issues and can develop its own stance on moral issues."
The Rev. Billy Honeycutt, of the Green River Baptist
Association said that he hopes that those who see the
sign keep tolerance in mind. "Respecting religion is important
and respecting other people is important," said Honeycutt.
"Hopefully, a lot of people will have that thought when they
see the sign."

Following the religious controversy at a church in
Waynesville where several members were asked
to leave in what was termed a dispute over
politics, several groups threatened to boycott the
entire town due to the actions of one preacher.
Director of the Rutherford County Chamber of
Commerce Bill Hall said he does not think that
the Danieltown sign will have a negative impact
on the county's tourism or economic vitality.
"It is unfortunate that things like that happen and it
certainly doesn't represent Rutherford County,"
said Hall. "I think that most people will understand
that that is not a common attitude in this community."

Lovelace said he felt it was the Work of God to
display the sign and that no one in the church has
spoken up against it to him. He said the church has
55 members on the roster and he has only received
one angry phone call since the sign was posted.
"We have a good group of people," said Lovelace.
Lovelace said the sign changes every week.
"About Friday or Saturday we will have a new sign,"
he said. "It should state to some effect 'Where are
your treasures? Are they at the flea market or are
they in heaven?'"

Lovelace said that he does not
have anything against the flea market that
recently opened up down the street from the church.
"I enjoy a good flea market, but if people can be
down there at eight o'clock why can't they be at
church at 11," he said.

> they must have known !!

I had a 2900 in the early 80's. The drift was caused by the main tuning capacitor which used polyethylene (plastic) dielectric separators between the thin metal plates. This was the kind of tuning cap' used in most small transistor radios for decades. To prove that the cap' was the cause of the drift I temporarily replaced it with an air dielectric variable cap' of the approximate range as the OEM one. This made the oscillator much more stable. I disassembled the tuning cap' in my 2900 and carefully reassembled it taking care not to compress the stack of plates and separators two much. This did help to make the receiver more stable when the tuning was changed.

2165. Liberia - STAR Radio back on the air

Newsgroup: rec.radio.shortwave
Date: 2005-05-25 05:56:00 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3fiibfF8106pU1@individual.net>
Source record: 22750

24 May 2005
Source: NGO latest
press release
FH 2005

Fondation Hirondelle - Switzerland

Website: http://www.hirondelle.org

Monrovia, 23 May 2005 - STAR radio will resume broadcasting as from Wednesday 25 May 2005, at 16.00 local time. The independent news & information radio station will transmit on FM & Short Wave to Liberia & the Subregion from its studios located at Mamba Point, Monrovia, Liberia.

STAR radio was established by the Hirondelle Foundation - Media for Peace & Human Dignity in 1997 and had established itself as a primary source of independent & unbiased information for Liberians. It was forcibly closed by the then President Charles Taylor in 2000 and could not be reopened as long as he was in office. Taylor left Liberia for exile in Nigeria in August 2003, and in November the same year, the ban on STAR radio was lifted by Gyude Bryant, the Chairman of the National Transitional Government which replaced the Taylor regime.

STAR's program schedule is designed to be relevant to post-war Liberia. The accent will be on news and current affairs. There will be bulletins on the hour every hour, and three one hour current affairs programs daily. But as Liberia moves towards elections in October there will be voter education programs and an opportunity to quiz the multitude of political aspirants. There will be programmes giving medical and other expert advice on all sectors of society, and STAR radio will endevour to reach a mass Liberian audience by broadcasting in all of Liberian

languages. STAR radio will be on air daily from 5.00 AM to 10.00 PM on FM for Greater Monrovia, as well as 2 hours per day on Short Wave for Rural Liberia & the Subregion.

STAR radio is a non profit organisation run by Liberians in partnership with the Hirondelle Foundation. It is jointly funded by the European Commission, Switzerland, the Netherlands, Norway & the United Kingdom.

2166. Christian Broadcasting Station in Madagascar to Reach Five Billion

Newsgroup: rec.radio.shortwave
Date: 2005-05-25 05:59:36 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3fiii7F7t3urU1@individual.net>
Source record: 22751

Tuesday, May 24 , 2005

World Christian Broadcasting has begun a new project to build a broadcasting facility on the island of Madagascar. This new radio station will increase the potential audience from three to five billion people, to over two-thirds of the planet who will be able to listen to Christian broadcast signal.

The second shortwave transmitter and antenna in Anchor Point, Alaska of the Short Wave Station KNLS, owned and operated by World Christian Broadcasting doubled the daily transmission time from 10 to a total of 20 hours.

The broadcasts in 4 languages of Mandarin, Chinese, Russian and English are made possible by churches, individual Christians, foundations and businesses using the facilities of Station KNLS, and the new structure is the result of "Double the Dream" - a successful fund-raising campaign.

Andy Baker, Vice-President, directing the campaign said, "The success of the 'Double the Dream Campaign' is the result of the efforts of a dedicated staff of workers and a whole host of generous contributors."

"Without them, we would have had only a faint hope of success, but thanks to God, we have realised our dream. Now, we can broadcast a full ten hours to the Chinese, without interruptions, a full six hours in Russian and four in English. That's twice what we have been doing since 1983!" Baker added.

President of World Christian Broadcasting, Charles Caudill explained about the hard work of staff in Anchor Point, "They had to work in some of the worst weather conditions you can imagine. The toughness and perseverance of Kevin Chambers, Dave Dvorak and Charlie Perry is an outstanding example of dedication and purpose. We are very grateful to them."

In a response, the President of Madagascar, Marc Ravalomanana, offered enough land for the World Christian Broadcasting company to build a state-of-the-art, digital broadcasting facility, capable to reach all of Africa, Australia, Europe, the entire Middle East, European Russia, several Scandinavian countries and South-western China.

Arabic programming will be added to the three languages used now.

World Christian Broadcasting, a non-profit organisation whose purpose is to help make it possible to teach God's Word each day to people who are otherwise beyond missionary outreach, says that the land is secure and ground preparation has started. World Christian Broadcasting will now fully focus on building the facilities there.

After completing the first preparations, digging the wells, stringing the power lines and installing the security fences, the combined stations will

constitute one of the largest and most powerful digital broadcasters in the world.

1997 vintage. I use it for shortwave listening - has Rockwell Collins mechanical filters in the receiver IF stage working together with DSP filters at 2.4, 1.8, .5, and .25 Khz; has several nice features - decodes CW and RTTY on LCD display (with menu selectable baudot rates for RTTY). Transmitter is in fine shape, just not used by me; power is 100W PEP, microphone included. Three 50ohm ant input terminals. Requires 12V power supply, not included (any decent 12 V power supply will work; needs a big one if you plan to transmit). Pics available upon request. Email me if interested - will sell for $550 plus shipping from CA.

This sounds like a classic negative feedback oscillation. You sense the signal is too large, so you send a signal to kill the gain, and then you sense the signal is too small, so you send a signal to increase the gain.

Having different attack and release time means you have two different time constants My guess is the quick attack leads to the instability, since it is the lesser damped system. If this is true, then you should concentrate on the attack time, i.e find how slow it has to be for the sytem to be stable.

Of course this is really had to do without seeing the circuitry in action.

Lion Mutilates 42 Midgets in Cambodian Ring-Fight

An African Lion much like this is responsible for the death of 28 Cambodian Midgets
Spectators cheered as entire Cambodian Midget Fighting League squared off against African Lion
Tickets had been sold-out three weeks before the much anticipated fight, which took place in the city of K�mp�ng Chhn�ng.

The fight was slated when an angry fan contested Yang Sihamoni, President of the CMFL, claiming that one lion could defeat his entire league of 42 fighters.

Sihamoni takes great pride in the league he helped create, as was conveyed in his recent advertising campaign for the CMFL that stated his midgets will "... take on anything; man, beast, or machine."

This campaign is believed to be what sparked the undisclosed fan to challenge the entire league to fight a lion; a challenge that Sihamoni readily accepted.

An African Lion (Panthera Leo) was shipped to centrally located K�mp�ng Chhn�ng especially for the event, which took place last Saturday, April 30, 2005 in the city�s coliseum.

The Cambodian Government allowed the fight to take place, under the condition that they receive a 50% commission on each ticket sold, and that no cameras would be allowed in the arena.

The fight was called in only 12 minutes, after which 28 fighters were declared dead, while the other 14 suffered severe injuries including broken bones and lost limbs, rendering them unable to fight back.

Sihamoni was quoted before the fight stating that he felt since his fighters out-numbered the lion 42 to 1, that they ?? could out-wit and out-muscle [it].?

Unfortunately, he was wrong.

This would be a Hit on PPV.

LOL! I was big into CB back in the early 70's and this moron became
convinced I was another guy that lived nearby and was harassing him
constantly. We did sound EXACTLY alike. I didn't believe it until I
heard a tape a friend made of me talking to him one night. It sounded
like I was talking and arguing with myself. Well, this pinhead pinned my
coax twice, and I decided to fix him if he tried again. I had a simple
ground plane antenna, with no connection between the shield and center
wire on the coax, and I made a box that had a relay in it that was
connected to 4 100 watt sized flashbulbs sitting in the windowsill.
When/if the coax was pinned, the relay would fire 110 volts to the
bulbs, and would scare the crap out of him. A week went by, nothing.

Then, one night, I was asleep. It was about 5AM, and the lights go off.
When I could see again, I could see a tall skinny guy staggering towards
the street that ran past the back of our yard. A pair of pliers was on
the ground and a pin was welded into the coax. My friend and I drove
past where the moron worked, and there he was, with a banged up face and
broken nose. He had run into a tree after being blinded by the
flashbulbs. Later on, he apologized and gave me a huge roll of coax to
pay me back for the pinnings.

A friend moved into a house a few years ago, and he and his girlfriend
are asleep and one night they hear someone talking. They didn't have a
phone yet and are all freaked out. They could only understand half of
what was being said, but it was obvious the guy was pretty drunk and
mighty angry. My friend puts some pants on and takes his baseball bat
and starts looking. It's coming from his brand new Sony XBR TV, and it's
turned off. He turns it on, and the voice disappears, off, and it's
back, making threats and swearing like crazy. They didn't know it, but
they moved about 3 houses away from the worst "agitator" in town. I
helped solve the TV problem with chokes and filters, but we couldn't fix
the other thing that had his voice coming out of it. If the toaster was
plugged in, you could hear, and understand everything he said coming out

of the top of the toaster. Even when it was in operation, you could hear the idiot yelling all the time. Obviously, unplugging it solved that problem, and nature solved the problem itself when the idiot had a major stroke at the ripe old age of 40, and it totally trashed his speech.

How Ironic..

>

When I was growing up, a neighbor lady was the neighborhood "anal". Another neighbor had a car that he was restoring, and after what should have a short test drive, the newly rebuilt engine let go, and he towed it home, and put it in the driveway to work on when he had the chance.

The neighbor lady started calling them up, nagging them about the car, then she called the cops, and finally, she got the neighborhood association involved and they "insisted" that he get rid of the car. He "resisted" and it went to court and by the time it got there, it had the new engine in it, and he "celebrated" by doing a block line burnout, in front of the old lady while flipping her off. About half the block clapped as he smoked the street.

Later on, she got a whole world of crap started when she objected to the 5 kids and parents who moved in next door and their seven cars that were parked in the driveway and street. This time, the neighborhood Assoc wasn't interested in her crap and she moved out..

> it remained, in the same spot, still an eyesore to her, but a legal
> eyesore.

There was one of those court TV type shows once where this guy and his wife who ran the condo assoc. repeatedly trashed another owners totally

restored muscle car that apparently they weren't impressed with. They left notes and wrote on the windshield stuff like "Take this junker to the junkyard!" After all the windows were broken with a punch, the tires slit, and the hugely expensive paint job keyed repeatedly, the victim installed cameras who caught the 60 year old husband and his 40 year old son trashing the car again.

The next afternoon at the condo association meeting, the cops come in and cart all three of them off to jail. The wife and son plead guilty and the hubby got 6 months. He goes into this huge tirade after the jury finds him guilty, and ends up getting a psych evaluation before the judge gave him the 6 months. The condo assoc. tossed the family out. The guy who had the car was then elected to the condo assoc. Irony again.

Red Star Over Hollywood

WHO: Ronald and Allis Radosh, authors of the new book Red Star over Hollywood.

WHAT: The Film Colony's Long Romance with Red Left, which details the behind-the-scenes radicalism of many members of the Communist Party in Hollywood.

WHEN: Thursday, May 26, 9:00PM CDT

WHERE: WGN Radio AM 720kHz - listen live
http://wgnradio.com/listen/index.htm

WHY: The Post-Modern or "Leftover" Left (AKA - David the Red Menace)

Early in 2003, the Left, with their useful idiot supporters in Hollywood and anti-American (i.e. anti-capitalist) forces around the world, committed themselves to protecting the neo-Nazi dictator of Iraq, Saddam Hussein. This tyrant, who recently engineered his "reelection" with 99% of the vote, has conducted a terror regime for more than twenty years, with constant torture, the use poison gas against Kurds and others, invasions of Iran and Kuwait, and defiance for 12 years against international sanctions requiring him to account for and destroy the stocks of chemical and biological agents that he admitted to possessing. This person was then elevated by the Left into the leader of the heroic struggle of the Iraqi people against America. Thus, one of the most violent and vicious rulers in the world, whose son reportedly regularly kidnaps, rapes, and murders women, becomes the "progressive" poster child for "peace." The most cutting retort to this seems to be that the United States supported Saddam Hussein against Iran. Well, the United States supported Josef Stalin against Hitler, and I don't hear any complaints about that, even though Stalin ended up murdering more people, and certainly enslaving more for longer, that Hitler did. But then Stalin was a good guy to these people, and we were bad for later opposing him.
...
The "peace" movement, therefore, like the "peace" movement in the Vietnam era, is not really for peace, it is for the defeat of America, by Communists if possible, but by anyone (like Hussein) if necessary. If Saddam Hussein has biological, chemical, or nuclear weapons, and if these can be put into the hands of terrorists, to kill thousands (more) or millions of Americans (and Jews), that is the consummation devoutly to be desired. The fools, who didn't mind when Bill Clinton overthrew the government of Haiti or bombed the hell out of Serbia, now naively marched with people whose fondest hope was that Saddam Hussein would survive and be able to kill us.

The United States, however, overthrew Hussein and occupied Iraq in three weeks. A country that has never had a liberal society or a democratic government, and is vulnerable to the attractions of Isl�mic Fascism, is a poor candidate for "nation building." The American experience in Iraq therefore may very well turn out no better than it was in Lebanon in the 80's or Somalia in the 90's; but any day such a dictator can be overthrown is a good day for humanity. This is what the Left can never admit, if such an event is ever of any benefit to the United States itself.
...
http://www.friesian.com/rand.htm#essential and scroll down.

Also read - The Black Book of Communism, published in 1997.

Fran�ois Furet, author and former Communist, argues that Stalin was able to mask the terror of the Soviet state, and indeed to widen its appeal to many in the West, by assuming the mantle of anti fascism.

For decades, the legions of Stalin�s followers were able to depict themselves as fellow partisans in the good fight. Moreover, they were also able to deflect attention from the crimes committed by Stalin and his henchmen, especially since anyone who told the truth about what was taking place in the USSR was immediately branded a Fascist. Thus we had the strange spectacle of the French left erupting in anger after publication of Courtois
 book, which they claimed (in a throwback to the days of the Popular Front) was a new apologia for fascism. Even today, it seems, critics of communism face stern resistance in the West.

Many liberals are reluctant to attack Communists unreservedly out of a fear that doing so would "play into the hands of the right." Anticommunism, in this view, is but a variant of antiliberalism, and it tends, moreover, to legitimate reactionary regimes and movements. To many well meaning Western liberals, therefore, it is more important to ignore or minimize the crimes of communism they are in the past, after all than to do anything that would aid the primary enemy on the right. In the extreme version of this position, as Malia notes, "a moral man can have no enemies to the left." From this perspective, it matters not that Communists and Fascists committed comparable crimes; what counts is that their "moral auras were antithetical." Malia responds to this view by citing the argument of East European dissidents that "mass murder in the name of a noble idea is more perverse than it is in the name of a base one."

http://www.firstthings.com/ftissues/ft0002/reviews/radosh.html

Already famous throughout Europe, this international bestseller plumbs recently opened archives in the former Soviet bloc to reveal the actual, practical accomplishments of Communism around the world: terror, torture, famine, mass deportations, and massacres. Astonishing in the sheer detail it amasses, the book is the first comprehensive attempt to catalogue and analyze the crimes of Communism over seventy years.

"Revolutions, like trees, must be judged by their fruit," Ignazio Silone wrote, and this is the standard the authors apply to the Communist experience--in the China of "the Great Helmsman," Kim Il Sung's Korea,

Vietnam under "Uncle Ho" and Cuba under Castro, Ethiopia under Mengistu, Angola under Neto, and Afghanistan under Najibullah. The authors, all distinguished scholars based in Europe, document Communist crimes against humanity, but also crimes against national and universal culture, from Stalin's destruction of hundreds of churches in Moscow to Ceausescu's leveling of the historic heart of Bucharest to the widescale devastation visited on Chinese culture by Mao's Red Guards.

As the death toll mounts--as many as 25 million in the former Soviet Union, 65 million in China, 1.7 million in Cambodia, and on and on--the authors systematically show how and why, wherever the millenarian ideology of Communism was established, it quickly led to crime, terror, and repression. An extraordinary accounting, this book amply documents the unparalleled position and significance of Communism in the hierarchy of violence that is the history of the twentieth century.

Before posting nonsense like this you should do the following:

1. Apply the National Enquirer test by asking yourself does the story make sense and could it have happened.

2. Determine whether it was reported in a real newspaper with a reputation for reporting confirmed stories.

Hi Ron

I heard switching supplies are not the best choice for radios. But I don't
know enough about them to really know. So you're putting fuses on the hot
wire {+}coming off the PSU to the radio??

Wouldn't the gel cell need to be 12 to 13.8v though? I've heard you guys
talk about gel cells for outdoor radio use. They sound interesting. So you
just add the correct sized plug to the gel cell for your radios power input
jack and you're good to go?

Has no one followed the link he provided? It takes you to the article in the May 2, 2005 edition of BBC news--the largest broadcaster in the world. That doesn't mean the article was true, but it certainly lends credibility to it. I doubt the BBC would print something that had no authority attached to it. Maybe they were fooled as well.

No it doesn't. Look at the URL. It takes you to www.newturfers.com

People might find this URL to be of interest.

http://lionvs40midgets.uk-directory.com/

"quote"

The article you're most likely expecting to read can be found here.

If you haven't already guessed, the article is fake.

05-07-05 ::: Updated: (05-17-05 5:05 PM EST)

:: Why the article was created:

- The debate:

It was created to 'settle' a dispute between a friend of mine in which he claimed that 40 weaponless midgets could defeat 1 lion in a hypothetical fight. Many of my other friends and I tried to convince him that the lion would definitely win, but he would not back down from his argument. After seeing another fake article posing as BBC about 'zombism' in Cambodia, I got the idea to make this fake news article to try and convince him for the final time. (Please 'Join the debate' at the bottom to express your opinion.)

- How it spread:

Comic files suit against 'Air America Radio' over pay

BY KAREN FREIFELD
STAFF WRITER

May 23, 2005, 7:14 PM EDT

Comic Lizz Winstead doesn't think Air America Radio was very liberal with her severance and other pay.

Winstead, who helped create Comedy Central's "Daily Show" and went on to develop Air America Radio, filed suit in State Supreme Court in Manhattan Monday against owners of the liberal network, which is a counteroffensive to conservative talk radio.

She claimed that Air America and Piquant LCLC, the latest owner of the year-old network, did not pay her for work as an on-air announcer. She said she also was not given the severance due her as an executive after she was fired in March.

"It's the sad old story of someone devoting 16 hour days to build an exciting, new venture -- and she's out the door without ... what she's promised," said Winstead's attorney, Edward Hernstadt.

Air America did not return calls for comment.

Winstead, who had a base salary of $250,000, claimed in her lawsuit that she didn't receive four months' severance pay of $83,333, unused vacation time of $14,423 and $200,000 for her on-air work.

Winstead hosted a show called "Unfiltered," with Chuck D. It was part of a network line-up that includes Al Franken created to combat the likes of conservative talk show hosts Rush Limbaugh and Sean Hannity.

In addition, Winstead claimed she never received money due for her on-air promotional work for the Vermont Teddy Bear Co.

****

I would think Air America would be a really poor employment choice.

Where did you see the link to the article on the BBC news website...I don't see one.

This is a perfect example of how easily people can be taken in by wrong information on a website. We are all used to printed newspapers providing articles with some level of reporting accuracy and truth. Many of us wrongly assume the same level of honesty applies to web based "news". Anyone can create a newsy looking website with the most outrageously wrong stories.

To charge a lead acid battery regardless if
if it is liquid, like your car battery, or has a
gelled electrolyt, requires a higher voltage then
the nominal rated voltage be applied.

Broadly speaking there afre three classes of lead
acid service.
Starting, cycle, and flaot.
The first is your typical engine atarting service.
Requires gobs of vurrent for short periods and loafs after that.
Cycle is like for golf carts, fork lifts, VHS camcorders, and in truth
the way I used to use a gell cell to power my SW for weekend
radio picnics.
Standby is for "emergency" loss of power applicaitns like emergency
lightst in public areas, PC UPS and the like.
And each service has different suggested charging voltages.
See:
http://www.osibatteries.com/pdf/Gel%20Batteries%202004.pdf
for one take on the correct charging voltages.

Cars charge batteries at up to 15V. A gell cell wll get hot and fail
very rapidly at that voltage. I have found 13.69V to be good voltage.
Some go as low as 13.5 or so. Much below that 13.5 and the battery
will not charge.

Half these for 6 volt batteries. I have a couple of 6V gell cells
designed
to power camcorders that I use with our DX398 for week end radio
picnics. One DX398 will operate for over a day on a single battery.
To get slighlty longer run time I could charge them at ~7V, but I prfer
for my batteries to live longer then run longer.

Everything is a trade off. Longer run time for fewer charge/discharge
cycles.

At home I would just operate everything from my 12 gell cells, I have
linear step down regulators to reduce the 12V to 9V and 6V as needed.
With each devcie protected by a OVP after the reduction regulator.

If I knew a power outage was going to last a "long time", I would power

our DX398s from the 6V gell cells. I scalvaged 4 PV (solar cells) from
some dead lawn night lights that produce ~150mA at 4V in bright
sunlight,
by making 2 parallel sets of 2 in series I get 8V at ~300mA. With a
simple shunt regulator I get 6.845V,more then enough to keep the gell

cell topped off and operate 2 DX398s at the same time.

I have a couple of older Arco ~12V PV arrays that produce >18V @.75A in bright sunshine, so I could recharge my 12V gell cells and or operate some equipment during daylight hours. Remnants from the cold war when the great nuke out seamed likely.

Terry

Don't know too much about Air America...are they having problems attracting listeners? If that is the case, then I'm not surprised to see them jettisoning the high-paid help. Let's remember the news article presents one side - hers. She may have something due to her under a contract or this may be her demands to right a perceived wrong. Who knows. I've seen enough termination fights to know articles like this would be incredibly boring if they presented both sides equally.

Hi guys

It says in the manual that if the aerial selector switch is in the Norm position the terminal long wire and 50 Ohm coax socket are *both active. BUT, it also says the Whip socket, which is also the 50 Ohm coax socket, is only active when the switch is in the Whip position.

What if you 2 antenna connected to the radio at the same time? One as a long wire connected to the terminal and 2 small dipoles on the 50 Ohm socket. If **both active when the switch is on Norm, how is the signal being distributed to the radio?

I mean wouldn't this be a bad setup? 3 different antennas to the same radio? I was switching the aerial selector to the Whip position when I wanted to only use the dipoles. But then I wanted to use a long wire too cause certain fequencies came in better with a lower noise floor with it and vice versa. But it seems I can't switch to the long wire alone. The dipoles will always chime in too.

If I switch to the Whip position,, I can use the dipoles alone but not the other way around. So what do you suggest??

Also what I don't understand if switch is Attenuation position, it works on both ant connections. But the Whip has a built in pre amplifier. So why would you want to attenuate the pre amp?
It seems like a clumsy approach to me.

Thanks for any replies
Lucky

Thanks for the explanations Terry. I'm going to try one instead of taking 16 battries with me and HF-150. I charge up 16 2100 mAh in my "8 ata time" charger.
Does 8 in 8 hours so it's not that bad. The first charger I had took like 14-15 hours!

I refuse to charge the batteries in the Lowe itself. I wil not take the chance of accidents and I don't believe in the radio being in use all the time for such a simple process. I know I'm being overprotective of the radio but I think it's worth it.

I agree with you and slowing the attack is the only way that I have been able to approach stable operation with a fast release. But 20ms or longer attack runs counter to what I understand to be the objective - an attack speed of less than 13 ms and ideally about 1 ms. So, unless I have this wrong, how do other receivers accomplish similar speeds without self-oscillation?

The way my circuit operates (I think) is as follows (I'd be happy to send a schematic to anyone who is interested) :
a) assume an impulse of signal of duration very much longer than the attack time
b) the rectified signal is filtered of RF by a series-parallel R-C attack network whose adjustable output feeds an emitter follower
c) the emitter follower pumps current as a low resistance source into the release R-C network so the attack is not greatly slowed - its output feeds the AGC driver amp
d) at some point, equilibrium should be reached - the current flow through the release resistor and AGC driver base should equal the flow though the emitter follower - but maybe the emitter follower pinches off and that could be a cause of instability?
e) the signal drops, the attack network discharges at attack speed and shuts off the emitter follower, so the release capacitor discharges through its parallel R at release speed, the voltage to the AGC driver falls so the AGC bias rises at roughly release speed to increase RF/IF gain.

Having written that out, I have an idea or two I will try.

Tom

> know enough about them to really know. So you're putting fuses on the hot
> wire {+}coming off the PSU to the radio??

I put a fuse on the hot wire, with amps based on the carrying capacity of the wire
(not the capacity of the power supply!).

The wire goes upstairs from the basement, and at the upstairs end I run it into
many fuse blocks, each with tiny fuses (1/4 to 2a) for each of the devices I
power with it, depending on its needs. The wires that typically run into coaxial
power plugs have very little capacity before overheating, and you want its fuse
to blow before it (the particular wire) heats up.

So no short anywhere heats up any wire.

A normally functioning power supply is quite capable of burning down the house
if run into typical hookup wire without some fusing.

It's unintuitive because the same wire works fine at 120v, but it's amps that
causes heating, not power, and there's ten times more amps (=100 times more heating)
at 12v than 120v.

They're usually not much good right next to the antenna (or the radio, if
the antenna is on the radio), but vary in how bad the birdies they generate
are. My MFJ puts out enormous birdies so I'd avoid their switching supplies.
My Astron SS-18 is tolerably low. The payoff is that the switching supplies
generate much, much less heat, and thus use less power if left on all the time,
in particular.

Ron, What gauge wire do you use to run the DC upstairs?
I have some heavy silicon jacketed welding cable that I have considered using if I ever get around to building a real exteranal battery "bank". The main killer with normal wire is the heavy IR losses. 0.5 V at 12V is a killer.

I occasionaly, at rare moments mainly during T-storms, actually use my ham gear to talk. 8A max for 2mtr, about 10A on voice peaks for SSB. The rest of the time I draw less then 5 amp with every +12V device in the shack on. Which isn't all that often.

I have an 15A magnetic breaker on each gell cell. And individual breakers sized to meet the normal current demands per device.
I have a 6A meter, that only monitors the non ham gear. For most of my devices I use 2A mag breakers. This allows me to rapidly power down entire sections. The R2000s draw about 150mA each even when off for the clock, by switching off the +12V I avoid sneak devices that

might use juice even when off. My 12Amp supply is slighlty overloaded on voice peaks, but Lambda underates their supplies. It will deliver 16 Amps for 20 minutes before it goes into thermal fold over.

I have 2 clocks, on a 24Hr clock I built based on an early LSI (5314) chip with a built in backup/keep alive 9V nicad. My other clock is from my
1981 Subrau that we drove to death. The frame rusted through. Both clocks dfrasw abut 50mA with the display on, and less then 1mA displays blanked. A much better power load then the R2000s.

I have based my design on what I saw in a military comm center.
I have a 12A and a spare ready to turn on 12A, and my older 8A supply in the bottom of the closet. I bought all the parts surplus for less then pennies on the dollar. All told I have no more then $100 in my entire power system. And that inlcudes the PV arrays, gell cells,

everything.

As I mentioned before I have found the canon/amphenol 4 pin XLR connectors to be great, safe for 12V DC. The broadcast industry ony uses pins 1 and 4, I added 2 and 3 (1&2 and 3&4) this halves the IR losses, doubles the current from ~10 to 20. Each of the power loads, IC28A, HTX100 gettheir own XLR, the receive section has it's own 4 pin XLR that feeds a set of individually protected 5.5/2.1 coaxial power connectors. Presently I have 5 more scokets then devices. I mounted them on a piece of angle alumium and run male to male coaxial power cords. Makes changing things pretty simple. Each breaker is labeled

to help avoid confussion. Sounds a lot more complex then it realy is.
I try to only get gear that will work directly on +12V. But sometimes a

good deal on "odd" powered radios like the DX398 come along, so I
use LM117 to reduce the voltage. When ever I can I build the regulator
in the device.

I added several "cigerette lighter" sockets because it is handy to be
able to power up things like cell phone chargers froma clan DC source.

I also added a 20 Amp mag breaker, both + and - to switch to an
external power source like an automoble.

Again this all sounds much fancier then it really is. Back in 1974 I
learned
to not depend on the public power company. The tornados that came
through on April 3 that year knocked out power for several days. And
my all of my radio gear required 120V AC. I decided then and there,
sitting in the dark that the next time the lights went out I would
still be
able to listen.

31 years later I think I have suceeded fairly well.

Terry

2213. CREATING wireless interference 2.4Ghz?

Newsgroup: rec.radio.shortwave
Date: 2005-05-25 19:25:52 UTC
From: merlin.1102@gmail.com
Message-ID: <1117049152.493956.38270@g43g2000cwa.googlegroups.com>
Source record: 22798

Hello

I have a slightly unusual problem. I wish to try and create wireless issues in the 2.4Ghz range. Just short range interferences. My problem is that I live with 3 other guys. We all have portable phones operating in the 2.4Ghz area. We also rely on a wireless network for the internet. One of the guys phones continuously causes the internet to drop for everyone (but himself) when ever he picks up. The drop only lasts for about 5 seconds, until the computer can find a new channel, but its enough to disconnect, say and SSH session. We are all very annoyed and have pleaded with him to get a new phone. We even purchased a 5.4Ghz phone for him to borrow (a rather expensive one I might add). He is only living here for another four months. In the mean time however we all have work that has to get done and he refuses to use the 5.4Ghz phone or purchase a new one himself. He says we should purchase a new wireless card and it's not his responsibility. He says he feels he should not have to switch to a new phone simply because we have purchased 'inferior products'. I personally have three wireless cards (one built into my laptop, a Centrino, another from Linksys, and another form DLink) and he can drop all three of them. His wireless card is some no name brand which I cannot find nor do I particularly wish to anymore. His phone is actually so powerful then when I bring it into my room and turn it on, if close enough it causes all my wireless cards to make a low humming noise. No other phone in the house does that. Therefore, every time our internet gets disconnected cause he goes on the phone we wish to create enough wireless interference to screw up his phone. We understand that this will of course cause us to lose are internet connections, but we hope that after a week of him losing his phone he will agree to the 5.4Ghz or get a new more friendly phone.

So any suggestions on how to create this interference?
Thanks for any help you could potentially provide

PS: Please let me know if this is the wrong news group to post to.

Yep, causing deliberate interference is illegal. However maybe you could
change the power adapter on his phone. If you use one of a lower volyage,
that allows the phone to work, it will have reduced output and that maybe
enough to alleviate the problem.

If you use one that has a higher voltage output than the one that came with
it, you should also have a fan avaialable to exhaust the smoke from the room.
The phone's output will be similarly reduced and it will not cause the
problem again. ;)

Darn power transients !!!!!! LOL

They're not exactly going down the "toilet." They're broadcasting 19
hours of original material every weekday, with repeats and more
material for Sat/Sunday. With new stations being added weekly.

Their live broadcast over the Internet has a bigger audience than Fox
News -- not a bad toilet to be in, eh?

BDK <kingratatatboy@buckeye-express.com> wrote in
news:MPG.1cfe0bdcc5397a49898ec@news.buckeye-express.com:

I would have never thought of the bulb trick.

Years ago, my nephew and I dropped an M-250 into a stream from the roadway of a bridge. It was dark, and I watched the lit fuse as it went into the water. Despite my nephew's assurance that it would not extinguish due to the water, I was sure it did. Leaning over the edge, I strained to see it. Apparently the firecracker turned over in the water, fuse side down. Wham, it went off, bright light, loud sound, and splashing water. It wasted my mind. For a short time, my nephew had to guide me back to the car. The military and police have exploited such ideas for crowd control. Unexpected flashes, loud sound, and in the case of your hapless victim, perhaps a shock too.

For the life of me, I can't see why people move into Covenant Regulated Neighborhoods. My co-worker was the president of one neighborhood association, he was proud that he refused a woman the right to have a yard sale, as the parking problems that would temporarily arise would be "inconvenient" for others.

Regards,

Dr. Artaud

news:p6s991d1epum3fnjmphggk2o0fsvhiraip@4ax.com:

Fortunately, the post is there for all to see. Me thinkst you are a
little thin skinned.

Dr. Artaud

See below.

Ok, I officially give up. What is the link to the "Petro-Kam" site?

(A simple request for the information, showing my frustration with
myself, not you)

Petropavlovsk-Kamchatsky

(My findings, a city name, pertaining to Petro-Kam, yet, I cannot find
the frequencies anywhere.)

Is this of what you speak? Russian?

(It appears to be a Russian City, and though I find many links, still
nothing pertaining to radios).

It's either this or a link to a petrochemicals company.

(Go here, http://www.oilonline.com/oilcapital/neft_3_0105.asp search for
Petrokam by using the "Edit" and "Find on this Page" function of Internet
Explorer)

During my searches for the link to which you refer, and when I found a
similar company by the name of Petrokam, I pondered Oil Rigs. I wonder if
shortwave radio is/was popular on oil rigs, especially isolated ones?

(Genuinely a thought about the Oil Rigs at sea and if SWLing is popular
there).

Anyway, please provide the link to the Petro-Kam to which you refer.

(After all the allegedly nasty comments, odd that I suddenly become
friendly, you see the problem is that I never addressed anything towards
you in a nasty way)

Thanks,

Dr. Artaud

2237. DE1105 is now being sold

Hi Tom,

You might find some good info from reading the description and
data sheets for the Analog Devices SSM2165 and/or SSM2166
at www.analog.com. They address the issues of having a threshold
which can be adjusted and then varying the amount of compression
or limiting asymetrically. Perhaps you could modify your circuit to
emulate some of these features - or perhaps just use the devices
described?

Did you look at the schematic? It's pretty clear what is going on.

The intent is not to connect 2 different antennas at the same time- it is to
give you the option of one or the other.
The attenuator and preamp are only connected to the coaxial socket. One
would use the preamp position with the short whip- rather than a preamp, it
is a Z converter; making the whip+ preamp into an active antenna.
The attenuator position is to prevent strong stations from overloading the
150's wide open front end.

73,

Dale W4OP

$250 k for a national talk show already on over 60 stations is very low pay.
Local talk hosts in larger markets make more.

I'm... appalled. What dictionary doesn't include tithe???

Anyway, from dictionary.com:

tithe Audio pronunciation of "tithe" (P) Pronunciation Key (tth)
n.

1.
1. A tenth part of one's annual income contributed
voluntarily or due as a tax, especially for the support of the
clergy or church.
2. The institution or obligation of paying tithes.
2. A tax or assessment of one tenth.
3.
1. A tenth part.
2. A very small part.

For starters, the've always claimed a million listeners streaming on
the internet. Since this number is reported by the stream servers it's
credible.

One million puts them in the same league as FOX. They have 50+
stations and XM to put them over the top.

< Snip >

I don't know receiver design but I have a RX340 that uses the following
settings. Attack is in dB/mS, Hang in seconds, and Decay are in dB/S.

Attack Hang Decay
Fast .8 0 1600
Medium .8 0 100
Slow .8 0 25

Programable attack .01 to 1 dB/mS
Programable hang 0 to 99.9 seconds
Programable decay .01 to 99.9 dB/S

Factoid which the alledgedly *objective* BBC World Service
perceptually failed to mention in its analysis is that Uzbekistan also
enjoys strong relations with Russia AND with the PRC opps CHINA. It
really is a shame they have prohibited foreign journalsits into the
area. It seems they may have leaned something from watching the
mainstream US media.

I don't know why, but when my dad's surplus store closed in 1970, I took a lot of the oddball stuff that didn't sell, including three grocery bags full of those big flashbulbs. I used them for jokes, putting them into a lamp and the huge "POP" it would make and amazingly bright flash always made people jump. In a dark room, ONE of those bulbs would cause you to not see anything but a blueish blob for several minutes, but 4 of them was total overkill. Just one was kind of painful. I was asleep and missed the brightest part of the flash, and they were behind the curtains too, but I wasn't able to see much of anything for a while, so it's no surprise he ran into one of our many huge Walnut trees.

I have a friend who's parents are being hassled by the condo board where they live for painting their trim a "unapealing color". It's light grey, and the only colors they mention as a no no are yellow, red, green, and any "obnoxious" color. No explanation of how this is determined.

It looks fine to anyone except the board members.

I would live in a crappy trailer someplace before I would live in a
condo or apartment again.

I would agree...the days of hamfests are coming to a close.

I was a faithful attendee of Dayton until 1999....since then I have NO urge to go since Ebay serves my needs well.

This last summer I went to our local hamfest after not going for ten years...it confirmed that I had not missed anything by not going.

I seriously doubt that the Dayton Hamvention will last another ten years.

I also suspect we will begin seeing manufacturers going the same route as the hobby continues to die out.

Date: 2005-05-26 04:13:51 UTC
From: Guy Atkins <dxNOSPAM@guyatkins.com>
Message-ID: <EqydnUj38_P_0AjfRVn-iA@comcast.com>
Source record: 22947

PAPUA NEW GUINEA 7120, 0825-1030, Wantok Radio Light, Port Moresby May 25
First noted fading up above the noise prior to 0830, with contemporary
Christian music alternating with talks or devotionals. The signal was still
extremely low until past 0930, when it strengthened enough to make out an ID
by a male announcer exactly at 0959:38: 'This is Wantok Radio Light,
broadcasting to Papua New Guinea on... meterband(?)...'. It took a number of
replays of my recording to be certain of the ID, but it is definitely there.
At 1000 I heard introductory music and mention of 'Welcome to Focus on the
Family...with author and... Dr. James Dobson' at the start of this popular
Christian program. It also fits the broadcast schedule at
http://www.wantokradio.net which shows Focus on the Family at 7-7:30pm local
Port Moresby time. Very pleased with this definite log of this new PNG
outlet! I also received an e-mail from Dave Olson, engineer at the station,
who said that the 'Bird of Paradise' call I heard at 1101 on 5/23 is
actually a warbling siren at the beginning of their Monday evening program
'Community Policing'. (Atkins-WA)

Hi Dale

Yes I knew about the small whip and pre amp for portable use. I guess both antennas can't be hooked at the same time even though it would have been nice to be able to switch from the long wire to the coax socket like on the R75.

I tried to improvise by using the "Whip" preamp position to cut off the long wire and just use the coax but it seems I was not doing that. I was just switching in the preamp on the dipoles and the long wire stayed active too. I was under the impression since the preamp only worked in the Whip position, it cut off the long wire connection at the same time letting me choose between the two.

Under that impression I wondered why it wasn't vice versa. Did you understand what I mean??

I guess I need a separate switcher like RHF suggested.

Thanks
Lucky

Lucky,
.
If the Whip Antenna's SO-239 Jack and Pre-Amp 'position'
work together; then you could use a Shielded Coax Cable
Loop Antenna instead of the Whip Antenna connected to
the SO-239 Jack and switch-on the Pre-Amp. Consider
to possibility . . .

With over 60 affiliates, they are probably well on the way to making money
already.

At the risk of encouraging your trollish activities. I never accused
you of being nasty. You are spinning my comments just as you do your
own to suit your purposes.

You knoew exactly what was meant in the original email by Petro-Kam.
You then thought you'd have some snide fun. No one's laughing except
maybe you.

You are right that the originals are there for all to see. I can see
that we interpret things differently, but perhaps you should choose
your words much more carefully in the future to prevent other
misunderstandings as to your intent.

Regards,

Al in CNMI

Because the show was not getting clearances from the affiliates, so they replaced it. Same reason why TV shows are cancelled... bad ratings or lack of affiliate clearance.

Well right now I'm doing that but using 2 small dipoles hooked up to the 239 jack and a 4:1 current balun. Why a loop instead? Do loops function better with a preamp? I do know they null out noise much better then long wires or dipoles.

Thank you

Here is their reply:

Dear Steve,

Thanks for your kind message!

We've started on 104 FM lastnight (1kw), but still need a few weeks to be on SW &
actually we do not know the frequency yet as we will be doing it through a company
in the UK.

Meanwhile, we looking into posting the news scripts on the website. So you may soon
find some interesting stuff there.

I'll keep you posted.

Kind regards,

But, if you put the antenna switch to "Norm", you can use the 239 jack without the preamp according to the manual. This is what I used to use when I first got it. I rarely used the long wire spring antenna terminal. So again why a loop with the preamp??

I wonder what antennas most people use on their 150's? The wire spring terminal or the coax socket and why??

Hi Ron

I heard switching supplies are not the best choice for radios. But I don't know enough about them to really know. So you're putting fuses on the hot wire {+}coming off the PSU to the radio??

Lucky

They may have improved swith mode power supplies in the last few years. But my experience has been that they produce a LOT of RF noise. Sinc ethe local RF noise almost always set the limits for reception, you can't receive singals lower then the locla noise floor, it is weel worth the erffort to keep my house as RF "clean" as I can.

And using a switch mode to power my radio gear is at odds with receiving weak signals. I have friends who use switchnmode supplies, and mounted them in faraday cages with extensive fitlering for the AC mains and DC output. Even a well built linear/analog supply can need some additional bypass caps to really quiten it down.

If I were going to use a switch mode, I would be sure to have an arrangement to retrun it if it was too noisy.

Another point for me is linear supplies will last much longer due to their passive nature. Switch mode supplies have electronic switches, ether bipolar or FET transistors that fail with suprising regularitly. At the electronic facility where I work, we have linear supplies that are over

30 years old. None of the switchers last any where near that long. And anyone can repair a linear supply if it fails, switchmode supplies are much more complex and when they fail are very dificult to repair.

Terry

I think you will be pleasantly surprised at both the number of stations that radio will catch on just the whip antenna as well as the quality of the sound. Degen really packed a lot of performance into a nice looking radio that is priced very reasonably.

Dear Australian HF (Short-wave) Radio Listeners and Users

You have only up to the 24th of June 2005 to respond to the ACA's (Australian Communications Authority) "BPL Discussion Paper". A paper copy of the document can be obtained from the postal address of Manager, BPL Project Team, Australian Communications Authority, PO Box 78, BELCONNEN ACT 2616 AUSTRALIA.. Or you can get it direct from http://internet.aca.gov.au/ACAINTER.65650:STANDARD::pc=PC_2845 or request it via Fax (02) 6219 5231.

It is important that Australian users of HF (Short-wave) Radio respond to this BPL discussion paper, if no responses are received the ACA will assume that no
one cares and the only long distance alternative to satellites will be gone.

Good morning Terry.

Based your real world experiences, it sounds better to stick with linear PSUs for now at least for me. I don't have the know how Ron has to make sure it all works right with a switching PSU if there is any added problems. I like to eliminate any potential problems that might occur if I have a choice. I just want to listen to the radio, not build faraday cages :)

Lucky

Basically, she was getting about $1000 for each 2-hour national
broadcast she did -- not a lot of money in the entertainment world.

I used to listen to her. She and her co-host were actually a lot more
entertaining than Springer, who replaced them. Oh, well...

Because there initial deep-pockets investor was a fraud and they ran
out of cash for a while. Staff defered their paychecks.

As for the Winstead lawsuit, it's related to early termination of her
contract and in Showbiz this this kind of suit happens all the time.
We just don't know what the merit of her claims is.

AA says they will have positive cash flow within the year. Not bad for
a startup.

It's a lawsuit, which means there is a disagreement. We don't know if
AA or Winstead is in the right. This will be settled in (or out) of
court.

$300k isn't going to make or break AA.

They sure do! I recall something about Garry Meier who was on WLS Chicago with Roe Conn turning down what I think was 7 million for a 5 year contract and walking. Perhaps you know what the figure was being more closely associated with that kind of MW info.

I'm not sure what Roe got after renewing his contract. Roe does a good job, but it's just not the same without Garry.

Hi Lucky

I have an Astron SS-30m. It's a switching power supply, and I've had no problems with RFI.

I've never been fond of switching power supplies, but I'd read some good reviews, and decided the fact it's smaller and much lighter than a similarly rated linear supply made it worth a try. (I have a bad back)

It was a good decision.

I found it on ebay a couple years ago, new in box for roughly $100.

I figure it'll handle just about anything I might need other than jump starting a car.

They also make an SS20m. It probably would have met my needs, but the price on the larger one was right, and I figured extra capacity meant it would probably run cooler and last longer. I've yet to notice mine running above room temperature.

Regards,

Mark

I currently run an RS-20M here, generally used as a power supply for my R7 though used on occassion for some two meter gear. At one time I had an RS-50M as I was running about 170 Watts on two meter sideband and CW.

2297. Re: Lowe HF-150 Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-05-26 15:57:18 UTC
From: Pete KE9OA <p.gianako@worldnet.att.net>
Message-ID: <ylmle.834228$w62.445551@bgtnsc05-news.ops.worldnet.att.net>
Source record: 22830

I use my '150 with the high impedance input, using a Radio Shack air core loop antenna. My reason for this is so the input circuit doesn't load down the loop.....this way, I can take advantage of the unloaded Q of the antenna. This provides a sharper tuning characteristic.
The preamp is good for very short antennas. Since it is a broadband preamp, it sees many tones (signals). It has a relatively low dynamic range; its multitone response is not very good. The result is that signals far removed from your desired receive frequency can drive the preamp into gain compression if their level is high enough.
There is another complication here.....it doesn't have to be just one strong signal. Several medium level signals, if their integrated (combined) power is high enough, can also drive the preamp stage into gain compression.
There are two results that I know of that can happen. First of all, the amplifier can appear to not have any gain at the desired frequency, and second, since the distortion of the amplifier rises at the 1dB compression point, signals can appear at different points on the tuning dial where they are not supposed to be.
An example of this is with my AOR-7030. In the Chicago area, if I have a long wire connected and the whip amplifier is engaged, I can hear MW stations in the 15MHz range.
If you thing of the absence of bandwidth limiting in the same manner that you think of the aperture of an optical system, things become clearer. If you were to connect a sensitive RF power meter to a long wire antenna and compare the power levels of broadband response vs bandwidth limited response (preselector), you would see a lower level of integrated RF power with the bandwidth limited response. This is the reason that receivers with input filtering ahead of the 1st stage perform better than receivers with a wide open front end. There are exceptions such as the Racal 6790, the WJ receivers, the AOR7030, and other receivers in the "premium" catagory, but even these units would perform better with some sort of preselection.
My definition of preselection can be either a tunable form or fixed tuned lowpass, highpass or bandpass circuits.

Pete

www.purple-octopus.com

A different online multimedia experience: one common idea takes different forms: a story, music, illustrations, videos, then converging in publications, DVDs, and animated comics. Driven by pure creativity and fresh talent.

- Purple-Octopus.com launched ï¿½
Purple-Octopus is a new online space that aims to give life to a different creative multimedia experience. The concept rather simple, one common idea is developed in different forms and then takes many directions: a short story, illustrations, videos, animations that are both presented individually, each an inspiration for the other, and then explode and implode in converging nodes including publications, DVDs, and online animated comics. All content is created and thought exclusively for the Internet, the site itself being a multimedia palace.

The first BETA incarnation launched today includes a basic design, short stories, videos, illustrations, a range of services, and a first comic animation . The site furthermore includes a Blog where current work in progress is anticipated. This first version was developed thanks to the efforts of six young artists and their different skills, ranging from writers, animators, and visual artists.

Purple-Octopus aims to become open space creativity fuelled by the minds of young fresh talent worldwide that produces multimedia content for the Internet driven by pure creativity and passion for what they love most.

2303. Re: AGC Design?

Newsgroup: rec.radio.shortwave
Date: 2005-05-26 17:57:11 UTC
From: Tom <holden_family@sympatico.ca>
Message-ID: <1117130231.745038.154940@g14g2000cwa.googlegroups.com>
Source record: 22837
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.shortwave

Telamon, those are interesting numbers, expressing the action of a more sophisticated, programmable, digital AGC. Classic analog AGC speeds are expressed as the length of time it takes to reach a certain percentage or within a few dB of the desired gain setting, i.e., similar to and based on RC time constants as that was the foundation of the classic AGC control system. With an RC derived control, whether the gain change is 10 dB or 100 dB, it takes the same time. With your digital control in 'Fast' mode, attack would be 8ms for 10 dB and 80 ms for 100 dB; release would be hang time plus 6ms or 60 ms respectively. It's interesting how these compare with my target of 1-13 ms attack, 25-50 ms release.

I'm wondering how your RX340 behaves when you program to 0.01 dB/ms attack, 0 hang, and 1600 dB/s decay (but I see that the programmable decay is limited to 99.9? probably for good reason!). That would correspond to my Fast target when you tune from no signal to S9+50.

Regards,

Tom

Mr. Crook doesn't know history very well; those without
a military tend to get run over by those who do. He may
not like the Iraq war, but effectively disbanding the
military by eliminating all forms of recompense is akin
to asking to get clobbered over the head.

I wouldn't go THAT far, but I DO think that the US military needs a total, top down reconstruction. A modern guerilla insurgency (like the one in Iraq) will run circles around a typical bureaucratic military structure (like the US armed forces) because the big military bureaucracy has absolutely no way of responding to the tactics of the insurgents as fast as the insurgents can change said tactics. We need to eliminate much of the bureaucracy (it's ridiculous that only 1 out of 4 active duty US soldiers are combat ready troops) and get more rapid response strike force type units that can be dropped in to the middle of an insurgent held area, adapt to insurgent tactics as fast as the insurgents can change them without having to go through layers of bureaucracy to do so, and live off the land while fighting outwards from the middle to join other strike force units in a pincer action to cut off insurgent cells from one another and force them to wither away. I realize that in the US at least creating a more mobile, better responding military that's more able to fight the wars of the future (wars in which there are no front lines and the bad guys don't wear uniforms) will mean a lot of entrenched bureaucrats having to give up power, but the demands of the war on terror demand nothing less.

>Having written that out, I have an idea or two I will try.

Having encountered a similar problem many years ago, I'll offer
this as a suggestion: Analyze the behavior of the total signal
amplification chain at LOW frequencies, not at the RF or IF
carrier. Know the control characteristics of the AGC voltage
input to the amplifier versus the total amount of gain of the
receiver chain. Approach the whole receiver AGC action as a
low-frequency servo loop (which is what the AGC actually does).
Think servo control systems theory.

Control systems theory is a rather abstract thing and there
probably will be no sudden bright light of understanding
switched on, but here's a bit of that: The AGC loop action
works by BOTH magnitude and phase at low frequencies.
"Nyquist" and "Bode" plots are helpful there, even though

both of those subjects are also rather abstract. In general, if the AGC control action results in instability or even motor-boating, the overall receiver gain - related to the control voltage range - is too high. Adding a voltage divider at the low-pass R-C filter of the AGC voltage input will demonstrate that. Also, the low-frequency phase shifting in the AGC voltage "decoupling" can upset the phase versus magnitude of the control voltage. Note: Vacuum tube or FET RF/IF controlled amplifiers probably use such R-C decoupling, working only on AGC voltage; other amplifier types might have some other form of R-C filtering at low frequencies. That low-frequency magnitude AND phase relationship is important for total loop stability.

What has to be considered in the AGC loop is the response through all the decoupling newtorks between the ACG control source and the controlled device(s). For a "non-linear" loop (separate attack and decay times) that analysis will be difficult. It is much easier to analyze with a Spice simulation that has the capability to model a controlled-gain amplifier. The whole loop at low frequencies can be modelled that way. In starting that, forget the RF and IF components and consider only the amplifications at low frequencies; the source of the AGC control (detector output) may have to be modelled slightly differently in that the detector is, in effect, similar to a power supply rectifier. If that model is tweaked to be stable with sudden transitions on its input, then it will be stable at RF and IF.

Let me add one more general note about AGC design. The BFO frequency is very close to the IF, and it typically puts out volts of signal while the AGC circuit is trying to operate with millivolts. Unless you're very careful with layout, shielding, and balance, a lot of BFO signal can get into the AGC circuit and cause disturbances and malfunctions of various kinds.

The last AGC circuit I did was very conventional, and it's the sweetest operating one I've ever used. But I went to great pains to keep the BFO out of it, and feel that was one of the essential ingredients in getting it to operate so well.

Their not insurgents, they are terrorist. Anybody that deliberately kills unarmed civilians is a f--king terrorist. But I guess anybody that agrees with their activity might be inclined to label them insurgents but never the less they are terrorist.

It won't die out unless prospective hams choose to believe false statements like "... as the hobby continues to die out". You are attempting to create a self fulfilling prophecy. There are bound to be fluctuations both up and down over the years but at over 600,000 licensed hams we are not yet in any danger of dying out unless people believe unsupported statements like yours.

Dee:

That is all fine and dandy, and a scope goat for the why "hams are NOT dying" mantra... what group(so) are a smaller minority than the hams, and why should anyone (even the FCC) bother with such a small group--when--it can be combined with other users and managed much more intelligently, fairly and cheaply... hams are just not that special--this is all ancient technology they have and deal with, the future needs to combine young engineers and scientists into communications so everyone ends up with a better use of the radio spectrum...

The younger hams should set the course, they will inherit what they build... within one decade many of those holding ham tickets will be gone, in two decades the numbers are LARGE, in three decades those numbers are FRIGHTENING!!!!

Those under 40 would best pilot this ship...

"Those under 40 would best pilot this ship..."

JS> But look at the pilots of the ARRL.

Do you know of a source for reliable data on ham licenses that drills down below the often quoted total licenses outstanding. Are there any studies that estimate the number of active licenses and ages of the holders and how those numbers have trended over time.

Lucky,
.
The Coax Cable {Shielded} Loop Antenna will have a
relative 'small' size an therefore a smaller signal
level; but the relative noise level will be reduced
much lower then the signal level (greater noise
reduction).
.
The Coax Cable {Shielded} Loop Antenna can be rotated /
positioned to help 'tune-out' your local noise sources.
.
The Coax Cable {Shielded} will usually have a better
Signal-to-Noise Ratio then many other larger antennas.
.
The Pre-Amp can be used to boost the lower signal
levels of the Loop Antenna to Hear Radio Signals
that may not be hear with other Antennas due to the
higher noise levels present when using the other
Antennas.
.
.
Two (2) Coax Cable {Shielded} Loop Antennas
for Shortwave All Band Coverage.
.
A single 25 Foot piece of RG8 Coax Cable with PL-259
Plugs on each end can be made into two separate Coax
Cable Loop Antennas :
Cut into a 9 Foot and 16 Foot sections.
.
= Thirteen Foot (13') Loop Element with a Four Foot
(4') Diameter and a Three Foot (3') Feed-in-Line for
a Total Length of 16 Feet. This Thirteen Foot (13')
Coax Cable {Shielded} Loop Antenna is roughly 'cut'
for the 49m Shortwave Band with good coverage across
the 75m, 60m, 41m, and 31m Bands.
.
= Six Foot (6') Loop Element with a Two Foot (2')
Diameter and a a Three Foot (3') Feed-in-Line for
a Total Length of 9 Feet. This Six Foot (6') Coax
Cable {Shielded} Loop Antenna is roughly 'cut' for
the 22m Shortwave Band with good coverage across
the 31m, 25m, 19m, and 16m Bands.
.
Sizing the GreerTech Coax Cable {Shielded} Loop Antenna

for the Shortwave Bands :
http://www.greertech.com/hfloop/charts.html#SWL%20CHART
.
.
RG8 'type' Coax Cable "In-Door" Loop Antennas :

that is an interesting question, I think statistics became so bad in 1999 to
2002 that they have began hiding them, what do you have?

Warmest regards,
John

2326. Bro. Stair LEAVING WWCR ? ? ?

Newsgroup: rec.radio.shortwave
Date: 2005-05-27 01:05:14 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <119csie1s7pjk9b@corp.supernews.com>
Source record: 23058

It appears Bro. Stair will be LEAVING WWCR!

I'm sure if you asked him he'd SAY he is not angry about their needing more money for the air time they had been selling him at a greatly reduced price.

HOWEVER, I heard him briefly this morning while waiting for David J. Smith with the News Watch Magazine, http://www.newswatchmagazine.org to come on at 7:00 EDT on 5070. He kept emphasizing that he was leaving certain frequencies on WWCR. He *could* keep 7465 M-T but he'd only take it seven days a week. "There's no need in my keeping it four days a week, until they can sell the airtime," is his attitude - even though I'm sure he is still getting it at a greatly reduced rate - until they can sell the air time at a more reasonable rate!

His attitude when making the above comment tells me he will be LEAVING WWCR all together as soon as his contracts run out on 5070. He apparently still has a contract on 5070 for a couple hours before and after Pastor Peters 4:00 am (EDT) / 08:00 UTC broadcast. (I think that might be from 2-4 & 5-7 am EDT / 6-8 & 9-11 UTC.)

One possible exception! IF he finds that the other stations are not providing him the revenue he could be getting from WWCR he *may* decide to loosen up and pay the going rate at WWCR.

We'll see. I have known a few people who'd cut off their nose to spite their face! :-)

2327. Pastor Peters Branson, MO convention on LIVE this weekend

Newsgroup: rec.radio.shortwave
Date: 2005-05-27 01:16:29 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <119ct7fi47ldra4@corp.supernews.com>
Source record: 23061

Pastor Peters, Scriptures FOR America,
http://www.scripturesforamerica.org will be broadcasting the Branson,
MO, convention LIVE this weekend.

He'll be broadcasting 24 hours per day on Saturday and Sunday and the
shortwave schedule can be found at
http://scripturesforamerica.org/audio.htm#wwcr

This web page also contains a list of messages that are FREE and
available for download or you can listen live via the net.

Obviously, the meeting won't be going on 24 hours per day so some of the
late night broadcasting will be replays.

Why take someone else's word for what Pastor Peters ALLEGEDLY teaches
when you can download his ACTUAL messages or listen LIVE and hear it for
himself? :-)

Unfortunately I don't have much...only rumor and innuendo.

The FCC statistics are interesting and show what appears to be a gradual decline in membership - The total of renewals plus new licenses is less than total expirations. The FCC staff analysis in 2000 was not exactly glowing in it's projection about the future - kind of a gradual decline. It would be interesting to see the data over a longer period of time but I believe FCC changed it's methods around 2000.

What is missing is how much current licenses are used. With that data we could guesstimate expirations. That would take a study that the FCC doesn't have the resources to fund and one the ARRL may not want to know the answer to.

There may be a point in the future where the new loss of members begins to increase but there is no way to forecast that because licenses are good for 10 years and there is no way to project future expirations because we don't have any idea what current license usage is.

And people under 40 (or under 50, for that matter) aren't going to
bother with Morse Code, for the most part.

It will be interesting to see what the license numbers look like in a
few years in countries that have eliminated the code requirement. Will
the numbers be better there? For that matter, are other countries
seeing the same apparent declines that we see in the US?

Message-ID: <hofd91hnccah7gv49fpon65jqtj526bo7o@4ax.com>
Source record: 23072

No real ID...Tuba music at 0500z. In spanish, preaching, church organ music, talk programs, and more preaching etc til 0634. Sig overall 2+ to 3 with heavy fading. No real id's at hour...just program changes...and lots of impassioned preaching at 0635z+...

If this is Radio Victoria, Peru, it's only about 5KW...
Radio Gaucha is also on freq but not at that time, and this is definitely spanish, not portuguese....So id REE, but it's another time too, and REE is much 'slicker'...This is pretty basic christian radio...

anyone can confirm?

Yes, (well, most likely) If it can be exported to text, it can be
harvested. Take a look at googles "view as HTML" option for instance.

Not sure if spammers have resorted this far or not yet though...

Have a look at spamassassin if you want a good (free) spam detection
system.

In the US anyway... I can't get BBC very well. Wish I could, as it's
some of the best programming around.

Not much to talk about I guess, except to say I hope the BBC survives
it is one of the few fairly trustworthy sources of information.

2341. General Warning or Advisory/Tip about bidding on ebay.

Newsgroup: rec.radio.shortwave
Date: 2005-05-27 07:50:24 UTC
From: nospam@geniegate.com
Message-ID: <Lucy1117180224217710x519e8@air.tunestar.net>
Source record: 23077

Hi newsgroup:

I "bid" on a radio, within an hour or so, someone "outbid" me. So-far so good, all is fair. (and I was kind of glad for opportunity to change my mind)

Anyhow, I *didn't* engage in a bidding war, the other guy won. After the auction I was given an offer to "purchase" the radio.

I *suspect* the seller had another account and bid to inflate the price, hoping I'd play along. Nothing illegal or immoral about it, but just thought I'd point it out to anyone looking. (Seemed strange that all of a sudden someone would be interested in it, despite there were still hours to go and it had been listed for days)

If you are interested in something with relatively few (or no) bidders, bid on an item and then are outbid, it just might be the merchant playing you. By not playing along, you could end up saving yourself the cost of a bidding fight.

As for me, I'm still looking at them, just not emotionally attached. (My ace in the hole)

A few nights ago the old curmudgeon was running his time-tested
"..somebody out there has 100,000 to give me 'cause g-d
told me so" scam, only this time, he was asking for 100K
in Euros! I forget what freq. this was on but it was no doubt
aimed at European audiences as his reputation in the USA
is completely into the toilet from fallout from his trial in SC.

Bottom line is Bro Stairmeister is a relic from the old days
of the traveling circus tent preachers. He knows most people
can see right thru his bullshit so he panders to the ignorant
and uneducated masses to finance his dog-and-pony show.
He'd be better off using regional AM radio to snag more suckers
in the USA.

2343. Lack of US stations?

I was once told that it is illegal to broadcast a shortwave signal
with US as a target. (Not sure if that applied only to VOA or shortwave
in general) Is this true for non-government stations? (ham radio
the obvious exception, I'm talking about broadcast stations like
the BBC)

Why do there appear to be very few or no US based stations? (except religious
programming spilling all over the dial)?

Are there any broadcast stations that also broadcast on shortwave frequencies?

He confirmed my suspicious / expectations this morning. He will NO
LONGER be on WWCR after this week. He's "not angry" but he goes on to
tell about them selling HIS air time to Alex Jones, etc. Also God's
going to get them (WWCR) so to speak. They're going to find out that
most of these other guys who're just in it for the money are soon going
to no longer be able to pay their bills and WWCR will be having a
financial crisis -- all from driving the prophet off their station with
their EXORBITANT prices!

It's Mark!

Hi there. Hope things are going well for you. Hey, I have a bad back too unfortunately. Can't really do anything for many bad backs except meds.

Most of the ones on Ebay are your RS or SL models. Mainly linear supplies. Plus, I'm not looking to drop more then $50 on one really. So for me right now I'll just go with any good deal. I saw a couple switchers last week

though.

Does anyone know if Motorola makes a couple models for Astron? I see two or so Astrons on Ebay that are also refered to as "This Astron model is also Motorola part #1394A" and other part numbers. I saw one vendor who sold all Motorola equipment but he had 2 of the Astron's that were mentioned with Motorola in some Ebay ads.

They had Astron's name on them but funny a Motorola dealer has them as part of his inventory. Anyone know anything? {about the PSU's :) :)

Good to hear from you Mark. It's always a pleasure reading your comments. Hope our backs feel better.

Thanks
Lucky

Ron,

what capacity fuse should I buy for the usual wires that come with the power adapter tips at Radio Shack if I want to "Hot Guard" the output wires to power radios like you did? How can I find out it's carrying capacity? Is

1/4 A good?
I think they sell wires with fuse holdes on them right?

Thanks
Lucky

2352. WORLD'S SMALLEST WOMAN on Exhibit in Berlin -- Intelligent Design -- Petrified Human Bones -- Evolution - Unsolved Mysteries

The following four photos show a female adult skeleton that
measures only 14 cubic inches (5.5 inches) in height and was
discovered in a desert in Chile recently.
>
> http://mysite.verizon.net/edconrad/LittleWoman/MVC-004S.JPG

>
The miniature skeleton is the highlight of the "Unsolved Mysteries"
exhibit currently on display in Berlin, Germany, that continues until
the end of October.

Nearly 400 mysterious fossils and artifacts are on display,
offering Germans a once-in-a-lifetime opportunity to see
specimens that Establishment Science often doesn't
want them to see. Physical anthropologists and paleontologists
-- and many geologists, too -- realize these discoveries seriously
challenge their accepted theories about early man and the
earth's prehistory.
<
A prime example are the 38 specimens of petrified bones,
teeth and even soft organs that were found (by me) between
anthracite coal veins in Pennsylvania, USA, over the past
24 years.
<
They include two human skulls, two fingers (with fingernails),
a femur, several mandibles, a gall bladder (with gallston), etc.
This means that man must have existed on earth in almost our
present form while coal was hardening some 280 million years
ago.
<
I might also emphasize that most of the key human specimens have

passed state-of-the-art testing with flying colors. In addition, dried
blood and protein was discovered in several specimens by American
Medical Laboratories in Chantilly, Va., considered the world's most
prestigious medical laboratory..

> IS IT HONEST SCIENCE OR A CESSPOOL?
>
I've said it before and I'll say again -- for the zillionth time --
that the factless Theory of Evolution has been kept afloat for many
decades ONLY because of the vested interests of its proponents.
<
Members of the scientific establishment (involved in anthropology
and paleontology) are very well aware that evolution,
especially the evolution of man, is utterly impossible.
<
Yet they cannot challenge their Darwinian Doctrine -- they cannot
even open their mouths -- for fear of jeopardizing their vested
interests. This is it pure and simple. They're all in cahoots.
<
For them to stand up against the Establishment, the scientists are
more than well aware that their prestigious stature in the scientific
community will be kaput.
<
For the zillionth time, I am accusing members of the scientific
establishment of being involved in deceit, deception, collusion
and conspiracy to keep the impossibility of the theory of evolution
from crumbling to dust.
<
I know this firsthand because, over these past 24 years, members of
the scientific establishment -- at the Smithsonian Institution and the
country's major universities -- have not only toyed with facts and
evidence but have also tampered with it.

They are an utter disgrace to science and ought to be behind bars.

Instead of those letters behind their names, they ought to have a
series of long numbers in front of them.
<
Shame, shame, a zillion times SHAME.
<
==
<
(cc) talk.origins (Although my name appears in more than 27,000
of t.o's postings over the past seven or eight years, the leading
Internet science group dealing with evolution vs. creation has
blackballed my postings for the past six months. It has become
so frightened of me and The Truth that it is not allowing me
to express my opinions, since my postings regularly accuse
physical anthropologists and paleontologists of deceit, deception,
collusion and conspiracy in this business of man's origin and

ancestry. This is in direct violation of talk.origin's charter and
bylines.)

Or, it's the best place to find used radios so long as one understands how
it works and handles each auction intelligently.

Anyhow, I *didn't* engage in a bidding war, the other guy won. After the
auction
I was given an offer to "purchase" the radio.

****

NO- I'TS A SCAM. i got the same offer on a radio i was outbid on. i
received an email
off ebay for the same item. i emailed the seller and was told it was not
from him. a
scam, i googled ebay scams and found out this is nothing new. the scam
email said the
buyer backed out and i could have the radio for the top bid price. the
old send the
money and never hear from them again. i forwarded the email to ebay.
don't fall for
this one.

At least Stair isn't just in it for the money. No!

In addition to the money, there are all the destitute young girls on
his "farm".

WBCQ "The Planet" is based in the US and broadcasts to the US as well
on shortwave.

One thing is for sure... you didn't chime in with any original comments about the situation, however, for some reason you expect(ed) others to do so.

Boggling.

Was yours a link to an ebay site or a clone?

Thanks for the warning, I don't think thats what this was, just because
of the relative lack of interest in the item. (I didn't do it)

It is something to watch out for though, thanks much for the info!

I have built my own loop but it's way to big and I have to downsize it. I used like a 12Ft copper coil with a 1/2" to 5/8" ID
I then bought a 8 Ft by 1" length of PVC tubing and cut side holes the size of the coil OD or a little bigger on top and midway. Then after getting the coil as round as possible, I slid it thru the PVC holes I made. I used a small wooden round peg inside the ends of the copper coil for separation.

I picked a large air variable capacitor off Ebay and hooked up the coax using the shielded method from here and from other sites.
http://www.dxzone.com/cgi-bin/dir/jump2.cgi?ID=9868

This page had good info I used for building one but I made mine round not square.
http://www.dxzone.com/cgi-bin/dir/jump2.cgi?ID=9868

And here is great resources for building your own loop:
http://www.dxzone.com/catalog/Antennas/Loop/

I'm going to trim this loop down and hook it up to the 150's socket and put the switch on "Whip" for the pre amp to kick in. I also have a couple round pieces of metal that you find in lamp shades to keep them round. They are usually on the top and bottom part of the lamp shade.

They look and feel great for making a small desk side loop and you can choose the size you want from a selection from thrift shops that sell old lamps and shades. One shade can make 2 loops.

I might make a new one but using a smaller air cap and a good rotating stand for it. I'd pick up a small electric remote control rotator and leave the loop on the terrace and control it from the room. They are not expensive.

Thanks for good links RHF. They help give me more ideas so I can experiment.

Lucky

> the BBC)

FCC regulation 73.701 defines an "International broadecasting" station as one "...the transmissions of which are intended to be received directly by the general public in foreign countries." Stations licensed under this Subpart F are the only privately-owned stations allowed to broadcast to the general public anywhere on shortwave.

So yes, it's illegal for privately-owned U.S.-based shortwave stations to broadcast to the general public within the U.S..

However, a common tactic is to choose an official target area in Canada or Mexico, such that the station must beam most of its power across desirable areas of the U.S. to get to the border. For example, pick a transmitter site near New Orleans. Pick the most effective frequency to serve ITU Zone 9, the Canadian Maritimes. You can be pretty sure this frequency will also deliver a heck of a signal to the New York and New England areas...

FCC regulations don't apply to federal government-owned stations. However, it is my understanding that an Act of Congress establishes a similar prohibition against the Voice of America or other U.S. government-owned stations broadcasting to a domestic audience. I can't cite that law though.

Ham stations are not officially "broadcasting" - they are communicating with specific other amateur stations, or attempting to establish such communications. They're regulated under Part 97. There are other shortwave services that aren't broadcasting to the general public, and they too may communicate domestically.

None of this applies to stations outside the U.S.. The FCC cannot prohibit Canada, or Britain, or Germany, or Iran, or any other country, from broadcasting to the U.S.. And they don't try.

> Why do there appear to be very few or no US based stations? (except religious
> programming spilling all over the dial)?

There aren't enough listeners to make it financially viable.

People have tried. In my lifetime, WRNO New Orleans and KUSW Salt Lake City have both tried commercial shortwave broadcasting. Neither station

succeeded - both are now religious outlets.

This is interesting. Have you (or anyone else in the group) actually used a preselector and/or highpass filter with a 7030 and found it to result in improved performance? The 7030 is said to have such a robust front end that additional filtering is the last thing I'd expect to make a noticeable difference. In fact, I'd expect whatever tiny improvement that resulted from the extra filter to be outweighed by insertion loss.

However, I have an open mind about this--as well as a Kiwa highpass filter, standing by.

Additionally, there was a brief period back in the 80's as I recall when
someone, somewhere, got a hair up their behind and for a time it was difficult
to even get a QSL from the VOA due to the Smith-Mundt Act.

Cooler heads eventually prevailed.

Theres a Story about a well known Zoologist who had been looking for
any remains of a Sasquatch..as proof of it's existance.

Got a 'phone call, directing him to a person
- Who had such a specimen for.. examination.
After some financial transactions, he was driven, at night, in Winter,
to an old Barn out in the country..
Inside, there was a Freezer..
The lid was carefully raised, and there.. in the blue Glacial Ice..
Staring up at him....
$100,000 1950's USD and it was his..
He later found out he'd purchased a dummy, covered with racoon Fur..

Imagine what someone would pay for PROOF that the earth was really
really really
- only 6,000 years old..

I haven't really added anything. I already had the Kiwa highpass filter (which is a very good filter) and have been using it to reinforce the 150's front end. The Kiwa filter completely eliminated what minor problems I had with intermodulation. Otherwise the 150 works fine as it is.

The only thing that's really irritating are dumb Canucky boys who don't seem to know their true place in the world, let alone anything about shortwave.

Stuff a sock in it, boy.

Steve,

This is what Kiwa offers for the 150:
http://www.kiwa.com/HF150.html

Where did you get your highpass filter and did you install it yourself or is
it external?

Lucky

I don't know where you are seeing that, I see Collins gear going for
prices higher than ever.

I read about this law, thanks for the refresh on the title dxAce!

While the law makes sense (particularly in the context of when the law was
passed, but same principle applies today)

I can't really comprehend how a private shortwave station would be held
to the same law, as it (smith mundt act) is designed to prevent government
run propaganda (as we can see it worked flawlessly ;-/), wouldn't private
owned stations be excluded from this?

No. During the WoI, one of the main goals of Washington's
army was to beat the British on the field so as to legitimize
the Revolution. Washington felt that employing
guerrilla tactics against the British, even if successful, would
not lend to the legitamacy of the Revolution as much as
being able to beat the British, then one of the finest militaries
of the time, on the field.

Hmm.. might be good reason to discourage anyone from trying, we don't need
the same religious programs on even MORE frequencies... (I'm all for freedom
of religion and all, but... this is kind of crazy)

Your point about Canada brings something else to light, seems to me that
Canada has some extremely sparse areas that would be out of range for
normal MW and FM broadcasts, ideal candidates for shortwave broadcasts?
(When I lived there it was in a very populated area but some places, like
saskatchewan (sp) seemed extremely sparse)

Yet I can think of only 1 private english station. (AM 1010 and 6070khz) Wonder
why more stations aren't targeted toward Canada (or originate in Canada)? Or,
are there a bunch and I just can't seem to pull them in? (6070 doesn't usually
come in)

Dee,

I am basing my comments on what I see within the hobby.

When I went to Dayton, I was a member of a group of about 30 members who spent significant time and money to go and we did that for many years.

>From that group, now only less than five people go to Dayton and even those only go every couple years.

These are people who do hold licenses but use them less and less if at all. Many have since sold their stations.

Ham radio is in its twilight years and as the old guard dies off which is happening at an ever increasing rate, the slide into obscurity will accelerate.

As has been noted earlier, take a hard look at the demographics of the attendees of the Dayton Hamvention. It is obvious to the most casual observer that the age of the attendees is heavily weighted to the 50-60+ year range. Give them another ten years and the numbers decline further, it is doubtful that they will have the numbers to sustain the costs incurred to host the Hamvention.

I also think that manufacturers are preparing for this decline. The recent cancellation of the Drake R8B indicates that the hobby is not capable of supporting its equipment needs or the development of new product. The drop in the prices in collectibles such as the Collins line is another indicator that money is being spent elsewhere as interest wanes.

Your thoughts?

Releasing and selling are two completely different things....

That product is was not designed with the ham community as the prime customer.

Remember the LAST ham radio that Collins introduced, how many were actually sold and how much they really cost?

Come back a year from now and tell me how many of them you have actually seen sold.

There used to be more stations in Canada which were on shortwave, but I think now there are only a few left.

Used to be CFCX 6005 relaying CFCF, Montreal; CFVP 6030 relaying CFCN, Calgary; CFRX 6070 relaying CFRB, Toronto; CKFX 6080 relaying CKWX, Vancouver; CHNX 6130 relaying CHNS, Halifax; also CKZN 6160 relaying CBN; CKZU 6160 relaying CBU.

All QSL'd here.

6070 is a regular here all day long, and as I recall, the 6130 station may yet be on.

Yes, I have the external highpass filter sold by Kiwa. You can find information about it here: http://www.kiwa.com/bcb.html.

Since MW DX-ing doesn't interest me very much, and since it's a pain to be tuning a preselector all the time, it's nice to have a filter like this that will heavily attenuate *everything* below 2500 khz.

I.C.E. sells a comparable highpass filter (model 402), and I believe Par Electronics does as well.

Steve

Hi Steve,

You are correct in your assumption. The preselector isn't really necessary.
My statement was purely theoretical.......I think that the only way you
would see a difference would be if you would have a few signal generators
hooked through isolators and combiners, set up at high output levels and
tuned to different frequencies.
This would allow you to see the multi-tone response under very adverse
conditions. Under these conditions, a preselector would help.
Do you need to do this in the real world? Not really, unless you were using
this receiver on a ship where there were several high power transmitters
being used at the same time.

Pete

Given that Springer (and his agent) know the financial history of AA
and his agent, at least, wants to get paid, I assume that Franken is
telling the truth when he said, months ago, that the paychecks were
clearing the bank.
```

Here's what AA CEO published as a response to to Anderson's opinion column:

L.A. Times April 23 2005

Re "Why the Liberals Can't Keep Air America From Spiraling In," Brian Anderson's attack on Air America Radio is petulant and inaccurate, an indication that conservatives are having a hard time dealing with a robust alternative to the monopoly they had on talk radio since the 1980s. Regardless of how much Anderson and his ilk whistle past the graveyard, there is a large and growing audience for liberal talk. Every one of the original stations that picked up Air America has experienced dramatic increases in ratings. Our audience more than quadrupled what it was just nine months ago. We are on in 53 markets, including 16 of the top 20. A recent study by the independent Paragon Media showed that in markets where we are on the air, the names Al Franken and Air America have a greater familiarity than any other talk-radio names except Rush Limbaugh. Our Internet stream reaches 1.3 million separate listeners a week, more than any conservative show. Is Air America having an impact? Ask Tom DeLay.

Danny Goldberg
CEO, Air America Radio
New York

If Goldberg is BS'ing us I'm sure someone with hard Arbitron data will publish a comment on this. It's been a month and I have not seen any.

US Selling More Weapons to Undemocratic Regimes That Support 'War on Terror'
The United States has ramped up arms sales to some of the world's most repressive and undemocratic regimes in a misguided attempt to bolster counter-terrorism efforts since the Sep. 11, 2001 attacks on U.S. soil, says a new report from leading arms trade researchers.
The report, from the Arms Trade Resource Center at New York-based New School University's World Policy Institute, says increased weapons sales and grants have been used to reward countries that have either joined what the White House calls its ''war on terror'' or have backed the U.S. administration's military occupation of Iraq and Afghanistan.

The United States ranks top among the world's arms exporters and in developing countries, a majority of its arms are sold to regimes ''defined as undemocratic by our own State Department,'' says the study released Wednesday.

The study acknowledges that the increased weapons transfers are aimed at rewarding coalition partners and ensuring continued U.S. military access to overseas bases.

But in the long run, it adds, the strategy risks undermining--not enhancing--U.S. security.

''Arming undemocratic governments all too often helps to enhance their power, frequently fueling conflict or enabling human rights abuses in the process. These blows to the reputation of the United States are in turn impediments to winning the 'war of ideas' in the Muslim world and beyond, a critical element in drying up financial and political support for terrorist organizations like al-Qaeda,'' the report says.

''In all too many cases, U.S. arms and military technology can end up in the hands of U.S. adversaries, as happened in the 1980s in Iraq and Panama, as well as with the right-wing fundamentalist 'freedom fighters' in Afghanistan, many of whom are now supporters of al-Qaeda,'' it adds.

''At a minimum, the time has come to impose greater scrutiny on U.S. arms transfers and military aid programs,'' the report concludes. ''The facile assumption that they are simply another tool in the foreign policy toolbox, to be used to win friends and intimidate adversaries as needed, must be challenged in this new era in U.S. security policy.''

The United States transfers more weapons and military services than any other country in the world, according to the report. Between 1992 and 2003, the last year for which complete data are available, it sold $177.5 billion in arms to foreign nations.

''In 2003 alone, the Pentagon and State Department delivered or licensed the delivery of $5.7 billion in weaponry to countries which can ill afford advanced

weaponry--nations in the developing world saddled with debt and struggling with poverty,'' the study says.

''Despite having some of the world's strongest laws regulating the arms trade, almost half of these weapons went to countries plagued with ongoing conflict and governed by undemocratic regimes with poor human rights records,'' it adds. In 2003, for example, $2.7 billion in weaponry went to governments branded as ''undemocratic'' by the State Department.

U.S. programs are supplying arms to 18 of 25 countries embroiled in ''active conflicts,'' or warfare against domestic or foreign foes, the study says. These include Angola, Chad, Colombia, Ethiopia, Israel, Pakistan, and the Philippines.

Additionally, U.S. arms transfers to Uzbekistan--where at least 169 anti-government demonstrators were killed last week--''exemplify the negative consequences of arming repressive regimes,'' it says.

Countries deemed undemocratic by the State Department that nevertheless rank among the largest recipients of U.S. military aid and sales include Saudi Arabia ($1.1 billion in 2003), Egypt ($1.0 billion), Kuwait ($153 million), United Arab Emirates ($110 million), and Uzbekistan ($33 million).

The largest U.S. military aid program--known as Foreign Military Financing (FMF)--grew by 68 percent from 2001 to 2003, the latest full year for which data are available, rising from $3.5 billion to nearly $6.0 billion.

Under FMF, recipients get outright U.S. grants on condition they use the money to buy U.S. weapons systems. The foreign countries get nearly-free weapons (they incur the operating costs and additional expenses for parts and in some cases, training) and the money is churned back into the U.S. defense industry.

The biggest FMF increases have gone to countries engaged as U.S. allies in the wars in Iraq and Afghanistan. They have included Jordan ($525 million increase from 2001 to 2003), Afghanistan ($191 million), Pakistan ($224 million), and Bahrain ($90 million).

Afghanistan, Algeria, Pakistan, Uzbekistan, and Uruguay are among two dozen countries that either became first-time FMF recipients or were allowed back into the program after long absences. In all, the number of countries receiving FMF aid increased from 48 to 71 over the past four years, the study says.

''Perhaps no single policy is more at odds with President (George W.) Bush's pledge to 'end tyranny in our world' than the United States' role as the world's leading arms exporting nation,'' it says. ''All too often, U.S. arms transfers end up fueling conflict, arming human rights abusers, or falling into the hands of U.S. adversaries.''

The World Policy Institute's veteran analysts make recommendations they say ''would further the Bush administration's counter-terrorism agenda much more effectively than the disastrous arms deals documented in this report.''

First, they urge the U.S. government to follow the Arms Export Control Act, which requires that U.S. arms transfers be used only for self-defense, internal security, and in United Nations sanctioned operations; the Foreign Assistance Act, which bars

military aid and arms sales to countries with poor human rights records; and the Export Administration Act, which regulates the sale of items with both civilian and military uses.

Washington also should ratify an Organization of American States firearms convention that it helped draft, and it should cooperate with other governments to ratify an international arms trade treaty that would create legally binding arms controls and ensure that all governments control arms to the same basic standards, the authors say.

They further urge enactment of the Conventional Arms Threat Reduction Act. Proposed by Senator Richard Lugar, an Indiana Republican, the measure would authorize the State Department to eliminate or secure surplus and unguarded stocks of conventional weapons.

Finally, the report recommends that the Pentagon and U.S. intelligence agencies publish regular reports on the use of U.S. weaponry in ongoing conflicts and assess how arms transfers are affecting counter-terrorism operations.

Individuals and philanthropies including the Colombe Foundation, Deer Creek Foundation, Kligerman Foundation, Stewart R. Mott Fund, Ploughshares Fund, Proteus Fund, Rockefeller Brother Fund, Rockefeller Family Fund, Samuel Rubin Foundation, Secure World Foundation, Strachan Donnelley Trust, and Town Creek Foundation funded the report.

MOST U.S. ARMS SENT TO HUMAN RIGHTS ABUSERS

WASHINGTON [MENL] -- The United States exports most of its weapons to human rights abusers, particularly in the Middle East.

A new report said that more than half of the top 25 recipients of U.S. military equipment in the developing world were defined as undemocratic by the State Department. The New York-based Arms Resource Center said that in 2003 13 nations received more than $2.7 billion in U.S. weaponry under the Foreign Military Sales and Commercial Sales programs.

The center, part of the World Peace Institute, cited the top recipients as Saudi Arabia, with $1.1 billion; Egypt, $1 billion; Kuwait, $153 million; and the United Arab Emirates, with $110 million.

"In all, four of the five top U.S. arms recipients in the developing world had major issues, ranging from undemocratic governments, to poor human rights records across the board, to patterns of serious abuse," the Arms Resource Center report, entitled "U.S. Weapons at War 2005: Promoting Freedom of Fueling Conflict," said.

The law was intended to protect the clear channel AM stations from national
competition back 60 or so years.

I still like linear supplies - mostly because I can usually figure out how to fix them if they break. A nice thing about ebay is odds are another one will turn up in a week or two.

<snip>
> Good to hear from you Mark. It's always a pleasure reading your comments.

> Drifter...

This is a common scam.

A few months ago I sold a Questar lens, and a bidder contacted me with a copy of an email he got from someone claiming to be me offering to close the auction in return for a prompt wired payment. Fortunately, I was able to confirm it wasn't me and add a warning to my auction that this was happening.

I've also had people contact me after an auction claiming they were the seller and the high bidder backed out so the item was available for my bid.
In one case, the guy attempting the fraud was remarkably stupid because I won the auction, paid for the item, and already had it.

But these kinds of things aren't likely to happen on auctions for items bringing less than several hundred dollars.

I find that 9825 at 0200 (The World Today) broadcast from Ascension (I
think) to South America USUALLY comes in fairly well here in California.
In the last couple weeks however, ever since that big solar storm, it's
been really noisy and the signal level has been lower than usual
(usually S9, lately been S3-S5). Other freqs to try are 15280 and 15360
(Asian service from Singapore and Thailand) after 0000 to fade out
around 0300. This service has The World Today on at 0000, however, which
is at the same time as my local evening TV news (5pm Pacific time)-gotta
get the weather. 9740 also comes in fairly well in US early mornings US
time.
>
> Not much to talk about I guess, except to say I hope the BBC survives

Indeed. They're not up to the standards that they were 20 years ago, but
they're still pretty good, and they have a wide network of
correspondents.

Seemed to be most likely in Somali or some other language indigenous to the country.

Did have what seemed to be a brief recitation of the Koran at the beginning of the program.

This article says that there's a possibility that they knew the war was
over but chose to stay in the Philippines rather than go back to Japan.
It's possible; some American troops who after Vietnam found it
impossible to handle civilian life went to live in the jungles of
Thailand. I haven't heard the BBC in the last couple of days, but will
try tonight.

There are other differences. The colonials didn't kill civilians. Well, there were a few atrocities, but nothing like the daily onslaught against civilian populations that we see in Iraq. Also, there was no religious component to the colonial rebellion; they wanted self rule and freedom from taxes, not a religiously pure state. No suicide missions, either.

>Let me add one more general note about AGC design. The BFO frequency is
>very close to the IF, and it typically puts out volts of signal while
>the AGC circuit is trying to operate with millivolts. Unless you're very
>careful with layout, shielding, and balance, a lot of BFO signal can get
>into the AGC circuit and cause disturbances and malfunctions of various
>kinds.

I agree on the need for isolation of various circuits but fail
to see the relevance. A "BFO" is on for OOK CW reception and
normally a manual RF/IF amplification control is used to set a
comfortable listening level. Yes, AGC could be used on OOK CW
but it would be a mistake to derive the AGC control from an AM
detector getting "BFO" input...that would be the same as
introducing a DC bias into the AGC control loop...which would
change the AGC servo-action control...perhaps severely so.

Note: A "BFO" source is steady-state. The detector mixes the
incoming signal (usually at the IF) with the "BFO" to derive
the audio. If the AGC control line is picked off this same
detector, the DC component is akin to having a nearly fixed
DC bias inserted. To use AGC on an OOK CW signal, the audio
tone would have to be used...and that necessaitates a different
sort of AGC control source derivation. A peak-riding, perhaps
selective audio circuit could do that, but the complexity of
that part of the receiving chain is growing. It might be
easier all-around to just pick off the IF to a separate AM
detector as the AGC control line source. The "original"
detector could remain as the OOK CW output with isolated BFO
feeding it.

For SSB voice reception, a "BFO" is still present but a single
diode detector all-purpose sort of detector is far from
optimum as a combined audio source and AGC control line source.
It WILL work, but it is non-linear for both audio and AGC
purposes and that alone could be the source of AGC instability.
It depends on the IF signal level at the detector diode (or
"product detector" which is really a mixer stage).

A single diode with large time-constant on its voltage output
is a peak-riding source for the AGC control line. Whether or
not it follows fast "attack" conditions depends on the source
impedance capabilities of the final IF stage. If that is too
high then the "attack" time is slowed from the necessity to

build up a charge on the diode's load capacitance; that can be seen on examining an ordinary AC rectifier circuit in response to a step transient of AC input through various values of AC source resistors. The peak-riding capability is usually distorted on the leading edge...which then reflects on the AGC control characteristics (when loop is closed) in trying to hold the received signal constant at the detector.

Thought of as a servo-control loop, the AGC subsystem can get rather involved and complex, affected by a number of different factors, ALL of which are important insofar as AGC instability is concerned. "BFO" level is just one item and I will disagree that it is a very important. It is no more important than anything else in that loop in my experience.

As a suggestion to anyone else, I would recommend first either measuring or calculating the AGC control line versus both the antenna input level and the IF level at the AGC detector input. That yields a DC baseline datum on the controllable level of the receiving chain. From that, one can "back-track" calculate how well the closed-loop AGC action behaves; i.e., the antenna input RF level versus the peak audio output with AGC on. If that is using old-style "variable-mu" pentode tubes, then the control characteristics will show whatever non-linearity it has steady-state. That can be used as a special controlled-gain model baseline for a Spice analysis of the AGC loop. Differing time-constants IN the AGC control feedback can be set to observe closed-loop response with transient signal input to the antenna.

>The last AGC circuit I did was very conventional, and it's the sweetest
>operating one I've ever used. But I went to great pains to keep the BFO
>out of it, and feel that was one of the essential ingredients in getting
>it to operate so well.

Having had a National NC-57 receiver since 1948, I decided to "play" with it in 1959 and "improve" its performance, such as increasing IF gain. The first IF stage as well as the RF stage were AGC-controlled. Not knowing enough about Control Theory then, nor considering the low-frequency characteristics of the AGC control voltage line R-C decoupling, that modification became a disaster for anything but manual RF gain control. The motorboating (very low-frequency oscillation) extended to having the VR-150 screen supply regulator (gaseous shunt regulator to those of solid-state era times) going on and off. It was restored to its original components and not played with for over a decade. Much later, on having had to get into Control Theory and servo control loops, I could analyze how bad it was and see what I SHOULD have done. The control was too "tight" in trying to hold the audio output too constant over a wide signal input range. There was low-frequency phase shift in the AGC voltage

control decoupling that was responsible for most of the motor-boating; the VR-150 shunt regulator control range was a bit too narrow so naturally it had dropped out of regulation and added the final insult to the original "mod." [forty somethings and younger may not be familiar with such relaxation oscillator circuits :-)]

National Radio Company had made an acceptible product in the NC-57 but it was a low-end item in their product line. It worked well enough as a single-conversion HF receiver but it wasn't optimum in design and no doubt stock logistics at the factory probably accounted for some of the parts values. Several passive components seemed to be rather arbitrary in value choices. I had learned (or should say re-learned) that NO product is an example is "what something should be" as a design example.

There just aren't any "easy" answers for some things in electronics. But, they can be WONDERFUL, challenging "cross-word puzzle" kinds of thing to solve! :-)

If you read the appropriate reports from Broadcasting Magazine form the late 30's and the 40's, you will see the FCC rules (administrative law) are intended to protect US clears from shortwave domestic competition. The prohibition of the government using SW is totally different.

27 May 2005

To a generation of Americans, his was the authoritative news anchor's voice that came into homes via radio, and later television, during some of the most troubled and controversial times in history. To a generation of budding reporters, his was the name that set the standard of excellence when it came to broadcast journalism. Thanks to a new four-disc DVD collection, the life and times of CBS newsman Edward R. Murrow (1908-1965) can be explored in a wonderful collection of some of his best work.

Reporting from London in the late 1930s, Murrow spoke to America on radio, as well as to Europe via the BBC. He pioneered the use of shortwave radio to create simultaneous worldwide radio broadcasts; breaking news became just that.

With the help of correspondents he handpicked for posts around the globe (including Eric Sevareid, Charles Collingwood, Winston Burdett, William Shirer and Howard K. Smith), Murrow created the first daily news show back in 1938. Called "The World Today," the program featured 15-minute roundups from European capitals where the correspondents were stationed. During World War II, he flew more than two dozen combat missions over Europe and was live on the radio with broadcasts during some of its fiercest battles. It was Murrow and his contemporaries at CBS, most notably Fred Friendly, Walter Cronkite, Frank Stanton and Sid Mickelson, who eventually put CBS News on the planet.

"The Edward R. Murrow Collection" (Docurama) set for release on Tuesday contains an excellent biography of the stalwart newsman. One entire disc features highlights from Murrow's legendary "See It Now" television program, which first aired in 1951, as the first in-depth, magazine-style news show featuring interviews with luminaries of the day. The third disc features the documentary, "The McCarthy Years," which chronicles Murrow's relentless investigative pursuit of Sen. Joseph McCarthy during the famous Communist witch-hunts of the 1950s.

As powerful as those three discs are, the one that will leave perhaps the most lasting impression on viewers is the documentary "Harvest of Shame." Broadcast as part of CBS News' "CBS Reports" series on Nov. 25, 1960, Murrow's portrait of the exploitation of the American migrant farm worker in the deep South became the gold standard in the field of documentary filmmaking. It was also the first time in television history that the "fourth estate" turned its critical eye on the government and big business in such a public forum. Murrow's report shattered the perception of "the American dream" with its depiction of the deplorable pay, working and housing conditions of migrant farm workers. The black-and-white footage is made even more stark by the silence therein-- there is little commentary

from the reporter. Most of the language comes from the workers' themselves as their poverty (some made as little as $1 a day), starvation and the general absence of the most basic human necessities are revealed. It is widely regarded as one of the most unforgettable programs in television history.

The "Murrow" collection is a unique opportunity to learn about the genesis of CBS News and one man who was instrumental in that process. There are no extras to speak of on the discs, save for a timeline of events.

A biopic about Murrow, directed by George Clooney, is expected in 2006, but you might want to give the real thing a look first.

2416. Ofcom at Last Recognises the Importance of Amateur Radio

Newsgroup: rec.radio.shortwave
Date: 2005-05-27 22:11:22 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3fpk88F93q2uU1@individual.net>
Source record: 23001

On the launch of the consultation on a proposal to reform amateur radio licensing, the RSGB welcomes the statements made by Ofcom recognising the important role amateur radio plays in providing the stimulus for technical careers and the part radio amateurs play in radio communications research and development. They also pay tribute to the work of radio amateurs during emergencies such as the Boxing Day tsunami in South-East Asia. This is a very welcome change of tack by Ofcom, who earlier this year failed to recognise the role amateur radio and radio amateurs play in the field of technology and in the service they provide to the community at large.

The consultation runs until 18 August and whilst urging all amateurs to take part in the consultation, the RSGB also asks amateurs to take some time to digest the contents of the document before responding to Ofcom. The RSGB will be providing guidance notes to assist amateurs. These notes will be published on the RSGB website shortly. Copies of the consultation can be obtained from Ofcom post free by ringing 020 7981 3000.

by Lev Navrozov http://www.levnavrozov.com/

Fareed Zakaria [Pro-Jihadist], editor of Newsweek International http://www.rogerlsimon.com/mt-archives/2005/05/the_ideology_of.php , the mainstream media, and the political establishment of the West today have possibly never heard of Project 863, and Zakaria never calls the dictators of China dictators and does not understand what dictatorship is. Thus he claims that China is militarily "spending a fraction of what America does, at most ten percent of the Pentagon's annual bill."

How does he know? Well, the Chinese leaders (no, not dictators!) publish statistics (no, not propaganda!) on the subject.
...
As a geostrategist, Hitler was a nonentity compared with Sun Zi, and the Chinese dictators do follow Sun Zi's advice and not Hitler's example. They avoid war with the United States now if it cannot be won. They concentrate on the development of post-nuclear superweapons. They will strike only when the war will be won before it is fought.
...
The Chinese global colony will work for, and will depend on, the dictators of China, and certainly their power will be global.
...
...the post-nuclear superweapons being developed in China, in alliance with Putin's Russia, such as molecular nano superweapons, will destroy the Western means of nuclear deterrence. Zakaria and his Newsweek are living in 1945, while now it is 2005.
...
I used to say years ago that the Western political establishment and mainstream media are in a state of functional insanity, leading to the suicide of the West.
...
For functionally insane, or abysmally ignorant and mentally retarded, like the editor of Newsweek International, there will always be an occasion for "optimism" until the Chinese dictators strike with post-nuclear weapons, because they will know before they strike that they will win. Sun Zi said it.

I apologize for not being more precise in my nomenclature.

By "BFO" I mean the oscillator used for product detection when receiving SSB and CW signals. No AM detector is involved. The AGC pickoff is of course done from the IF preceding the product detector, and doesn't intentionally use the BFO or product detector in any way. The problem I was alluding to is that the BFO produces a large signal which is very near the IF, and therefore can get into the AGC circuitry unless some care is taken to prevent it. This produces a DC bias among other problems, which can interfere with AGC circuit operation. I found it necessary to completely shield the BFO, use a good doubly balanced detector, and use differential amplifiers in the AGC chain in order to reduce the BFO crosstalk to a tolerable level.

I strongly suspect that a number of the complicated AGC circuits evolved because a simpler AGC circuit was poorly designed and/or subject to problems like crosstalk from the BFO. Instead of solving the fundamental problems, increasingly complex circuits are developed until one accidentally works correctly, then the improvement is credited to the complex circuit rather than its accidental relative immunity to the results of poor fundamental design. This isn't of course universally true, but it happens pretty often.

Go back your stale beer and drugs wogie, no one is paying any attention
to what you have to say. Say, how many times do you use that
Restricted Radio Operators *Permit* you keep bragging about? You know,
the one where you don't even take a test, just fill out an FCC form.
What happened to that Second Class ticket you claimed to have? Did the
FCC make you retest for that one too and you failed?
HAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!

a number of collins gear models continue to bring in " staggering "
used prices .... this and the interest / prices keep rising on
ebay.

to see what I mean go to the " radio: CB, Ham, & Shortwave "
category and type in Collins and then look at the prices that the
640 " closed out " items have brought and be stunned !!!!!!!

used drake gear is right there behind collins too ....

some examples of recent collins sales :
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48700&item=5776496330&rd=1
gasp........
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4671&item=5776923356&rd=1
double gasp ....
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4671&item=5776501846&rd=1
omg .....
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4671&item=5775948196&rd=1
huh ???? ....
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=1502&item=5774578908&rd=1
numbing ....
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4674&item=5775229238&rd=1

and 100s more, recently .... simply shocking used prices
.... if this is a " drop " in prices I wouldn't want to see
the higher ones !!!!!!!!

k..............

2425. 7030+ front end

Newsgroup: rec.radio.shortwave
Date: 2005-05-27 23:46:54 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1117237613.926968.105970@z14g2000cwz.googlegroups.com>
Source record: 23009

For the last couple of weeks I've been testing out a 7030+. It's a very nice receiver, all decked out with Collins filters. Until earlier today, I hadn't used it to listen to anything in the 2-3mhz range. But, largely because of an earlier thread relating to intermod and the 7030+'s front end, I decided to put it through its paces.

To my surprise, there were noticeable images of big broadcast stations popping up on numerous frequencies. Now mind you, I'm in Brooklyn, NY and the BCB stations around NYC have to strain even the sturdiest front end. So, I wasn't all *that* surprised to find these images. However, it's interesting to note that none of these images are present on the Drake R8B.

I don't mean this as a criticism of the 7030+, since it's a great performer with lots of interesting features. I just find this result a little surprising.

Fortunately, once I put a Kiwa BCB rejection filter in line, the problem disappeared.

Steve

That's because the billions upon billions of dollars spent by the
Pentagon go down a bureaucratic rat hole. Totalitarian states always
have more efficient militaries than democracies, since the totalitarians
have conquest as their overarching goal, while democracy does not.

> How does he know? Well, the Chinese leaders (no, not dictators!) publish

The only link you posted was to Newsmax, which is not exactly an
unbiased source of info. Also, if RCI is "propaganda", how do you know
that the Chinese "statistics" aren't also propaganda? Like the old
saying goes, there are lies, damn lies, and statistics.

Molecular nano superweapons? I see somebody stayed up too late reading
Michael Crichton's novel "Prey". The Chinese do not need molecular nano
superweapons. They have a post nuclear superweapon, and it's called
fascist capitalism. China has succeeded in getting most of the world's
manufacturing capacity moved to China, thus giving them enormous
leverage over the West. If the US threatens to come to Taiwan's aid, the

Chinese can cut off supplies of boomboxes and T shirts. Don't laugh.
Most everything that Americans buy, the things that drive American
consumerism (and thus the American economy) are made in China. Deng knew
that China couldn't beat the West militarily, so he set out to beat them
economically. And he and his successors have done that.

The Chinese have already struck with their post nuclear weapon, and
thanks to the boundless greed of Western CEOs they have won.

Well there ya go! These folk have run their course in Ham radio and are bored and dropping out. Happens in a lot of hobbies

> Ham radio is in its twilight years and as the old guard dies off which
> is happening at an ever increasing rate, the slide into obscurity will

Making a demographic out of the people at Dayton? Just how many young kids are you expecting to see there?

I don't doubt that the Ham radio population is likely an older one. I also don't doubt that demographics for a lot of hobbies are shifting. It wasn't until my 40s that I started to get enough spare time to even think about a hobby. I tried Amateur astronomy, but the wx in central PA is kinda like Seattle, and I looked into amateur radio. BTW, if you think Ham radio is graying, Amateur astronomy would shock you.

The young ones will come into the hobby. We just have to wait for them to grow up.

> I also think that manufacturers are preparing for this decline. The
> recent cancellation of the Drake R8B indicates that the hobby is not

> capable of supporting its equipment needs or the development of new

Yeah, how many hams do you think ever had a Drake R8B? And of those who do, how many use it as part of their station?

The drop in the prices in collectibles such as the Collins
> line is another indicator that money is being spent elsewhere as
> interest wanes.

Personally I think any price drop in Collins equipment is on account of potential buyers regaining sanity. At Dayton this year, there were a lot of them. Some sold, a fair number didn't. Especially at the one tent where the people were trying to sell them for way over their worth.

Collins is old tube stuff. Fine radios no doubt, but hardly worth the price of a decent new rig.

So many came out this year at Dayton that potential buyers could pretty much call the shots. After all, you can ask for @ kilobucks for an old Collins, but is it worth that much if no one buys it for that much?

Well, in spite of China's plans to take over the US.
I am enjoying the little radio.
It is real easy to use.
Haven't used the single sideband feature yet.
Listened to it last night in bed, and woke up this morning with the radio
still going, with the backlight on,
and nothing but static.
The fm stereo sounds pretty good, not like a Sony but still nice.
AM reception is not bad, I went through all the bands, not hard to remember
the
button locations, and I like the dial, just feels better than a push button
to me.
Didn't use the whip antenna, but maybe will try it tonight.

He made the switch from mostly AM radio to shortwave back in
the mid-90's as I recall, although I think he's still on the AM station
clear channel out of Cincinnatti (1530 or 1540?) all night starting
around 2:00 am. (?)

Here's some links for shortwave:

www.wwcr.com WWCR

http://www.wwrb.org/ WWRB

http://www.whr.org/ WHRI

www.wbcq.com WBCQ

RG Stair used to blanket shortwave. He used to have a whole
transmitter dedicated to his airtime on WWCR, that is until some
allegations of sexual misconduct (mostly said over here:
www.thenetteam.net)

Since then his radio empire has pretty much fallen
down into the tank and is now circling the drain
so to speak. It's amazing that anyone at all fell for his BS for so
long...

It looks like the bottom line is that back in
June 1997 there were 678,473 licensed hams
and in May of 1995 there were 664,972 licensed hams.
Thats a decrease of 2 percent over 8 years. Its a decline but not by much.

Does anyone have statistics that go back three or four decades??

>
>
>
> - Mike KB3EIA -

maybe the value of the radio is in the beholder
or it's applications ....

for example , I have a satori / sherwood modded
, full boat, drake r-4c and a fully loaded FT1000 field ....sitting
side by side .. here in the shack and the so called " old tube
r4-c " blows the doors off my much newer
and more expensive FT1000mp v . the FT1000 receiver
is an embarrassment as compared to the drake on
weak DX in a VERY crowded CW band. no comparison
at all. people tell me that many of the collins receivers can be
tuned up to outperform even the drake r4-c receivers. maybe THAT is
why people pay more for a drake r4-c (I have $1200 to $1400
invested in mine , so far) or collins !! certainly the value is
in the weak signal / crowded band performance to me and
looks like it is to a LOT of other people too.

obviously , for your operating needs, solid state rigs do the job
.... but for those of us that need competition grade cw receivers
...... some tube receivers are still doing a better job. different
strokes for different folks. I've got the best of both worlds and ,
for me, tubes still do a better job in certain applications. (both
my amps < a alpha and a henry > have tubes too) .... I do
use my FT1000 for my transmitter / exciter tho .. ha ha ha ha ah.

k.................

Antiquities are only worth what people are willing to pay for them
including old tube junk. 10 to 15 years ago an old Chrysler Hot Rod from
the 60's or 70's wasn't worth much, now you can't touch one in very good
shape for less than 3 to 4 times the original selling price new. Go figure.

What would be of much more interest is the use to which the licenses are put. A history of how the various classes operated over time would provide a big clue as to what is happening to the service now. Hard numbers are better than the constant speculation I see here all the time. For example a decline in some types of operations could reflect a trend where the technology in use is either unpopular or being replaced by another one. For example AM by SSB. This would even answer the ever present question, and assertion, that Ham Radio is being supplemented by increased computer use and the Internet. Knowing that then the ARRL could spend it's time promoting those things that apparently Ham Radio still had the edge in capabilities. If you want increased license numbers then you have to know how to "market" Ham Radio, and if you don't know what the market wants, or you promote the wrong thing, then you end up with a declining market share, i.e. license numbers.

That's very strange indeed, as the 7030+ has the highest blocking specs of any hobby receiver and higher than some very expensive professional receivers.
It should definitely outperform a R8B in blocking out of band high power TX signals, so I suspect there is something wrong with it.
Maybe whoever installed the Collins filters did not do a proper job and this is causing the breakthrough's and intermods?
Don't give up on the 7030+ as over time it has proved to be one of the best RX's available.
Many of the top DXer's in Europe use it and they are near 1000 KW TX's - they have no problems.
Have it checked out by a professional with the workshop manual.

There may well be a problem with it. I must say I found it awfully strange, given it's specifications. Nothing else seems to be awry, though. It's sensitivity certainly isn't impaired.

Steve

That reminds me, I did recently have the receiver go through its filter calibration routine. That obviously shouldn't mess anything up, and the process is so automated that I don't think I committed any errors. Oh well.

Unfortunately I have a stint of business travel coming up next week and so I don't have time to tinker with receivers just now--even though it's much more fun than hanging around hotels and airports!

>But these kinds of things aren't likely to happen on auctions for items bringing
>less than several hundred dollars.

This one was for a cheap radio. I didn't really consider it a "scam", just a rather clever "trick" on the merchants part to inflate a price.

It was one of those "info-mate" crank style radios. (Anyone have experience with those?)

I wouldn't mind a cheap crank radio with shortwave AND weather band. I've got a crank AM/FM and I like it for storms, but, alas, no weather band, shortwave or other, so it'd be pretty worthless in a longer power outage. (It's AM doesn't work all that well, tuner sticks, etc.. the main feature is the crank & solar panel)

One thing I like about mine is that I can very quickly crank it part way, release the handle and it'll play while the spring mechanism unwinds (This is kind of important, when a tornado is on it's way, the 15 seconds to wind it even part way feels like eternity) The batteries charge AND the radio operates while it unwinds. No weather band though...

Never occured to me that some radios would have the crank directly connected to the dynamo, with a restriction that the radio can't be used while cranking. If the radio could be used *while* cranking, it'd be nicer than mine but if it won't operate during the crank cycle AND you have to turn the crank for 60 seconds before turning it on, (w/out the spring, so high speed cranking 4 x faster DOESN'T equate to 15 seconds) what use is it during emergency?

Digging further revealed this model had these restrictions, so, I was kind of glad to back out. :-)

In the 40's the FCC and RCA were in bed together, Armstrong came along with FM and RCA managed to lobby the FCC to change the FM band after some early FM radios had been in use, basically screwing E. H. Armstrongs efforts. (Who incidently tried to work with RCA, but thats beside the point)

I'm of the belief that the FCC isn't completely above-board on all matters, protecting corporate broadcasters (who probably paid for permits) from smaller startups is in line with the other FCC activities of the day.

Well that's straight forward enough at first glance. The sticking point is many don't want a Ham ticket for any reason, they don't even know what it is. The ones you need to ask are those who find they get what they want using other means, computer - Internet, AFTER considering Ham Radio. The ideal place to find that information are the classes the ARRL is pushing under their educational program.

This is an important point because the kids can then make an "informed" choice based facts and first hand experience instead of something they read in a magazine or seen on TV / movies. Also just how many of those kids that do get licensed stick with the hobby? For those that don't these are the ones that have the answers as to why, for example the cell phone - instant messaging fits their needs and interest better. I don't know if the ARRL even bothers to try and collect this kind of data.

>I'd almost bet they are telling the truth...

Why wouldn't they?

> Yanno, you can do a lot of things to try to fix something--but when you
> find the right fix--you'll know it!!!

If you're going to try random chance at least try to narrow down the number of options, improve the odds of success, a bit. That's only going to happen if the ARRL gets systematic about collecting some useful and meaningful data, otherwise known as market research.

Normally I just sandbag on the side in this news group reading the posts. Most of the arguments over licensing numbers are petty much useless since most don't have any hard statistical data to support their points. I have to admit some of the arguments I've read are very well constructed and logical, but without the hard data it's just all speculation.

The dilemma, if you want to describe it as that, of declining Ham licensees is little to worry about. It appears that some few hand-wringers are making much ado about nothing.

I have noted that, over the years, the majority of new Hams are not joining the ARRL. And for good reason, too.

The ARRL is a dinosaur, replete with septegenarians who are interested in doing things the 'old way'. Many new Hams look at the yearly fee to be a member and simply toss the application in the waste basket. I did this very thing some 25 years ago and never looked back.
After all, who really needs the ARRL? What do you get for your membership? A monthly magazine? Big deal.

I will leave the speculation and 'hard data' gathering processes to others who show an interest in data processing. Their efforts will be of little value in the long term scheme, other than they gathered some numbers and percentages that have little, if any, value in the long run.

Meanwhile, catch me on the HF bands. I'll leave the overcrowded two meter repeaters to the handi-talkie newbies.

All the more reason to upgrade.

In VK, we continue to see a steady decline, both in absolute numbers and in
membership of our national radio body (Wireless institute of Australia)
despite the removal of CW as an comulsory entry requirement onto HF.
However, we are about to see a new licence system introduced similar to the
UK system (which I believe resulted in an increase in numbers there). Age
demographics are pretty much on the "old side" - but there continues tobe a
trickle of young amateurs coming on line - how it will go in the end, not
sure.
On a side note, the use of HF appears to have increased, but not
dramatically and it would be difficult to prove conclusively that this is
the case (based mainly on callback numbers to the weekly WIA broadcasts).

Yep, you can say that a few dozen times.. still, we continue to buy that
crap from China.

Since it is now impossible not to buy junk from China, I'm an advocate of
used stuff whenever possible.

Wish we could actually do something about it. It's obviously not sustainable.
How can a country exist when it imports everything?

The really sadd thing is that this stuff is made at the expense of chinese
workers.

China doesn't allow it's workers to unionize, consequently, they can't
really do anything about the problem.

We didn't outlaw slavery, we merely outsourced it.

> 1/4 A good?
> I think they sell wires with fuse holdes on them right?

I fuse the individual device wires for the device's claimed needs, more or less
times two. If it says 500ma, use a 1a (quick blow) fuse.

I got a bunch of 6-fuse fuse blocks (automotive, I guess) and wire all of one
side to +12v, and attach the device + wires to the other side. Radio Shack has
4-fuse blocks. I'd really like 20-fuse blocks already wired together on one
side but haven't found any.

The 16ga zipcord is fused with an inline fuse (quick blow) at I think 7a.

Use quick-blow fuses because slow-blow fuses get very hot themselves without
blowing. If a device blows a fuse in normal use, just use the next size bigger
fuse.

Acc. to what I can find on the web, 16ga wire is good for 10a, or 13a, depending
on who you believe, and also that's an AC rating and who knows what that means
at DC. Anyway somebody believes that's acceptable heating. Every 3 wire gauges
thinner gives you 2x the heating.

And they think they're hot shit with underpowered radios that barely
cover the noise on the repeater. Two meter simplex is cool, though.

Regular AM stations were worried about competition from shortwave
stations with unlimited coverage. I suspect they may have been
especially worried that NBC and CBS would build their own shortwave
stations and then yank their affiliations from their local stations.

Source record: 23156

Noel sold me a Sony SW100 a few weeks ago. He told me it was in very
good condition, and it was indeed just like new. I'm really pleased.
Honest transaction and FAST shipping. If I wanted an AN-LP1, I'd
definitely buy again from Noel.

I've got an AN-LP1, Noel, so I'm not in the market now. I don't use it
often, but it really kicks up the SW receive in the 3.5 to 21 MHz
range. As everyone here probably knows, doesn't cover MW or 10 meters
and higher. I've even mastered the way to fold the loop into three
loops, FINALLY.

I think the AN-LP1's best role is as an indoor SWL antenna where you
can't string an outdoors antenna. The noise filter helps a little with
electrical noise and you can stick it to a window and be pretty good.

Need a lot bigger sample size though. The younger people that I know find
the code the most fascinating part. The resistance comes from people taking
up ham radio who are middle aged. However neither your sample nor mine is
large enough to draw conclusions.

Keep in mind that any change in rules may take years to have a noticeable impact on the number of licensees. How long has VK been codeless? Has it been long enough to have the hoped for impact? If you change licensing systems, the same questions need considered before judging it.

Here in the states, it seems that the last couple of changes in licensing requirements has had no noticeable long term effect.

It was a B-25 and the images were genuine (albeit mislabelled)

It's actually an interersting story in its own right, about high-res
side-scan sonar and the discovery of a WW2 training flight crash site in
a lake. Somewhere in the Carolinas, AFAIR.

These are probably not images reflected by the intermediate frequency but second and/or third harmonics of the MW stations. Presumably you have ruled out any cause external to the radio, e.g., the comparison is being made using the same antenna and with no other device (including the other receiver) connected at the same time.

"Why not just do what I did, ask the younger people why they are not interested in getting a ham ticket..."

I think the ARRL and the licensed hams need to consider that question too. Most young people don't see ham radio as an up-to-date way of communication. Rather they see the licensing and equipment required as an anachronism. They have numerous highly portable license-free ways of communicating with one another and getting information about the world. Why go through the hassle of getting a license and radio equipment only to find out that the people you work and play with are not on the bands. They don't know what see you on 2 meters means - and when it is explained most of them say but I can do that on a cell phone with lots of people right now.

Yes, only a single antenna is being used. I now think something has to be wrong with the 7030+ because the overload I'm experiencing on it is actually worse than the overload I experience on my Lowe HF-150--so, that clinches it. My guess is the SD5400 mixer needs to be replaced, but that's just a guess. No other aspect of the receiver's functioning appears compromised. It's as sensitive as ever and an external highpass filter temporarily improves things.

I can send it off to AOR UK if necessary, though it'll have to wait a few weeks until my business travel has ended.

If any of you guys have other hypotheses about what the source of this difficulty is, please let me know. Thanks.

Instead of moving over, Al Jazeera may be moving in, with Telesur that is.

As Telesur gets set to launch, the Arab-language news program Al Jazeera, which is funded by oil-rich Qatar, is expanding into Latin America, opening a bureau in Caracas and possibly creating logistical ties with Telesur.

An article posted on a Venezuelan government web site http://www.minci.gov.ve/noticiasnuev.asp?numn=6256 refers to Al Jazeera's expansion into South America as "being framed within the Telesur-Al Jazeera project."

A spokesperson for Al Jazeera said he could not confirm that the two networks have signed any deals between them but said it is possible that the two state-funded enterprises could be cooperating logistically. Kozloff says it is his understanding that Telesur has entered a deal to extend office space to Al Jazeera in Telesur's headquarters.

This is to commemorate 70th Anniversary of the very first FM broadcast,
ever.
On the original frequency, at original site, with copy of original
transmitter.

42.8 MHz is low enough in frequency that some DXers might get skip
reception. Most ICOM radios go high enough to get this.

See:
http://www.cscmgt.com/news/2005-05-25-wfdu-armstrong-broadcast.html

The above link should shed some light on your situation.....it looks as if the SD5400 mixer is damaged. It shouldn't be too hard to replace. I don't have any of those on hand, or I would send you one of them.

Hi John,

The 100 kw claim is absolutely bogus. I've received a half dozen or so emails from two people connected with the Wantok Radio Light project since last December; one of them is the head engineer working on the installation, and the other is the USA head of fund raising and development for the 7120 khz station and it's FM sister-station.

Both of these people have said more than once that it is a 1 (ONE) Kw transmitter! I even have a coverage map document that lists "1 Kw" as the power, and the photographs I've seen of the transmitter show a very compact unit... definitely not a 100 Kw package!

So... there's no question that Wantok Radio Light is 1 Kw. The weak signal I've been receiving here is appropriate for this power level. They are also using a "NVIS" antenna design that attempts to restrict as much RF energy as possible to a few hundred miles radius. Of course, we know that the similar NVIS "Shower Service" of the 120 meterband Aussies propagates around the world despite their attempts to keep it local. Still, a lot less energy than 1 Kw is propagated across the globe from Wantok Radio Light from their transmitter/antenna combo.

The coverage map indicates a signal dropping to "< 20 dBu" field strength just past the Solomon Islands.

73,

Guy Atkins
Puyallup, WA USA

Well, getting the Aussie Northern Territory stations which have a 50 Kw
output is already great DX, so getting a clear ID on a 1000 watt station
from far off PNG is really superb DX.
Congratulations and well done.
Everything has to come together for that = great DX skills, an outstanding
antenna system and a really good RX.

Of course, manually operated generaters were traditionally cranked directly.
All those WWII spy radios and emergency gear, when you pedalled or spun

the crank you were either charging a battery or running the radio directly.

A windup radio is a relatively new thing (or if it's not new, it was rare
until relatively recently). The Baygen was quite an innovation, in
terms of power, when it arrived on the market, and that's either
the introduction of the windup generator, or he made it popular. For
consumer radios, you really didn't see generators until the Baygen arrived.
Afterwards, they started becoming more and more common, with of course
other items added to the mix. I was given an LED flashlight at Christmas,
and it's got a generator.

There may be patent restrictions on the windup, or other manufacturers
are unable to create as neat a result, making them go to a regular generator.

I have no idea, but one guess at why you aren't supposed to use
the radio while cranking is that the generator may be too noisy. Either
it will interfere with radio reception, or they worry that the spikes will
damage the radio circuitry.

That LED flashlight of mine says the same thing, don't turn the light
on while cranking. But I've done it, and it's not damaged yet.

It's on the mods.dk site last I looked. It's swapping a bunch of
resistors on the top circuit board with some different values.
(In the back right corner, if you have the top off).

IMHO, not worth doing unless you have the top board (all the RF
signal processing circuitry) out for some other reason.

It's a matter of changing the values of the resistors near the attenuator switch in the rear right-hand side of the upper board. I think you can find the value changes in the "Files" section of the Yahoo R-1000 user's group. I only changed the section for shortwave in mine. I left the LW/MW attenuator resistors as they originally were.

Divide 300 by the meter designation to get the approximate frequency
in MHz. In real terms, that's around 5, 5.9-6.2, 7.1-7.5, and 9.3-10 MHz.

Really, they should just drop the meter band stuff, which dates back
to the early 1900s. VOA doesn't bother with meters anymore.

If you check the front end configuration of these two receivers, you'll see that the Drake R-8 has a half octave switched preselector filter, and the AOR7030 has only a low pass filter. That will make a big difference in what shows up near the broadcast band. When you put the BCB blocking filter in front of the 7030 that's equivalent to what is already in the Drake. I expect the 7030 is working up to specs.

Sounds good to me. Separated, isolated detectors allow one to
concentrate on the particulars of each, makes it a lot easier to
work with.

For what it's worth on the audio-output part, I'm more fond of
rather high levels of IF into the detector to get around the
"square-law" response...looking for a better AM envelope
reproduction. While that results in better audio, it also makes
decoupling more difficult to avoid feeding the strong IF back
to the input. Different problem, same cuss-words on the bench,
though. :-)

>I strongly suspect that a number of the complicated AGC circuits evolved

>true, but it happens pretty often.

I agree with you there. At least for voice-band detection
receivers (of which I've only built two in a half century from
my own design). Discounting copies of "All-American Five"

table-model cheapies using a single diode for both audio rectification and (low-pass filtered) for AGC voltage to a single controlled variable-mu amplifier. Ultimate simplicity for reasons of price over the counter. One CAN put a BFO on those (Hallicrafters did back in the late 40s) but the performance is not the best.

Separating the "detectors" by function is best. The audio "detector" (I still think of them as 'rectifiers') can be optimized for best sound. The AGC detector can be optimized for its action separately...and its response versus IF input and overall receive chain amplification tailored for the AGC control-loop "gain." Filtering-decoupling that follows can be figured out to keep the low-frequency phase response from upsetting the closed-loop AGC control.

Separate AGC and voice detectors lets one play around with "attack" and "decay" time-constants with no more than a single dual op-amp shaping circuit...multiple time-constants under manual control if desired, that won't interfere with the audio detection part. AGC detector input would have to be the fastest-responding (to desired time-constant) with a relatively simple op-amp doing the time-stretching.

Some folks might consider that op-amp addition "complicated." Won't blame them if they do. From my experience, a "complicated" AGC subsystem is having to AGC on a 1 uSec pulse with a time gate in the presence of other assynchronous 1 uSec pulse sidebands located on 1 MHz intervals (up to 3) on either side...with a decay to attack time ratio of about 1000:1. :-) Did that for an R&D airborne system at RCA...was somewhat too much but that allowed a greater simplification for a following generation of airborne equipment. A lesson there can be to "cover all bases possible" the first time around, then investigate to see what can be simplified for something less complicated.

AGC, in the basic consideration, should begin as a control loop. From there on its a matter of choice of circuits.

I'd be tempted to agree with you if I hadn't compared the 7030+ with my HF-150 this morning. The HF-150 was significantly less prone to overload than the 7030+, and I can't believe it would be if the latter were performing up to specs. I suspect the SD5400 mixer is damaged, since that's known to produce this sort of problem. I'm also sort of hoping it's a damaged SD5400 mixer, since that's a relatively easy thing to fix.

Another huge mystery in human history.

By the way, I was raised in Essen, and the area around once was Germanys most important cole mining zone. Tons of petrified humans must have been used to run Krupp's steel mills. What a pity!

Look at the bottom part of the address... shouldn't be an 'F' there, but a
'D'...

'F' would be the country code for France... 'D' would be the proper country code
for Germany.

Perhaps not so obviously. I've been getting into Hollow state
technology recently. Bought a couple olde tube Heathkits and their power
supplies at Dayton, and will restore them. I came into Ham radio (radio
at all) too late for tube stuff, and frankly, the tube rigs seem very
cool to me.

It would seem that you should sell that FT1000 and go strictly tubes if all you do is use it for transmitting. 8^)

Every student going though the electronics and engineering courses at the college here knows very well what a ham ticket is (the instructor is a ham), and darn well pass any of the exams blindfolded... seldom do they see the need or have the desire when they have tuned the bands and listened...

You think most other colleges are different?

Warmest regards,
John

"John Plimmer" wrote (in part):

snip
That's very strange indeed, as the 7030+ has the highest blocking specs
of
any hobby receiver and higher than some very expensive professional
receivers.
snip

I had the good fortune to have a 7030+ to play with for a couple of
weeks.
I would sell kidney or other spare body part tonight to buy one.
However I live less then 4 miles from a littlel 1KW MW on 770.
And we a few fairly local power houses at 590 and 630 and 1300.
On the 7030+ I could receive the 770+590 fairly strong the , the
770+630
and and the 770+1300 very strong. In a nearby park about twice as far
from the 770 station as my home, I get no mix products. The 770 is so
strong that it will show up in most receivers even with the antenna
disconnected and replaced with a 50 ohm terminator. By most receivers
I mean R390, R392, R5000, R2000 DX389(3.5mm plug inserted),
the 7030+ and every automotive radio I have ever tested. I suspect
that
the 770KHz is so strong is just causes the front end to "colapse".
It is funny that my PRC1000 requires at least a paper clip to receive
it.

I can receive them on a simple crustal set with just the leads to the
earphones.

I am very glad they are only 1KW and daytime only!

Terry

> equipment only to find out that the people you work and play with are
> not on the bands.

??? I guess your outlook and idea of what Ham radio is is to chat with your buds? In that respect, you are probably correct. If all you want to do is *that*, you are better served by chat rooms or the telephone. Why on earth anyone with that as their main interest would become a ham is beyond me. Ham radio is not the best hobby for that, although we can do that.

They don't know what see you on 2 meters means - and
> when it is explained most of them say but I can do that on a cell phone
> with lots of people right now.

A person that gives that sort of answer is never going to be a Ham.

Is there any possibility that you have the rear-panel pre-amp turned on in the 7030?

What happens when you add in 10 dB or so of attenuation?

< Snip >

The 7030 has a metal case and so is shielded. This looks like a good
case of the BCB station coming in on the power cord through the house
wiring. With the 50 ohm resistor on the antenna terminal use a RF choke
on the DC power cord to the radio to see if the AM station goes away.
Same should work for any other radio that has a metal case.

The non-shielded radios may have the RF go through the case as an
additional path to consider.

2545. Pirate on 6800 kHz recently... anyone copy?

Newsgroup: rec.radio.shortwave
Date: 2005-05-29 02:09:26 UTC
From: Sparky Voltz <sparky_unit_412@yahooEY.com>
Message-ID: <j29i91p7d3ce2htg66uaq0pdnai8kd1d6v@4ax.com>
Source record: 23127

As some of you may know, I've been posting on various newsgroups as to the formation of a new group of radio outlaws. We're licensed hams, CB'ers, Freebanders, and general phreekin'cie phreeks. Without going into overly boring detail as to my own personal radio history (you're more than welcome to check that out at the Yahoo! group's URL listed below if you're so inclined), a bunch of us have picked 6.8 MHz LSB for 2-way comms, in addition to 13.555 MHz USB. (And let's not forget 11 meters and all it has to offer -- when ol' Sol allows.) Recently, I happened to be monitoring our 6.8 phreekin'cie and heard a Pirate Broadcaster with quite interesting programming. It consisted mainly of "Number 9, Number 9, Number 9 from the Beatles' "White Album", mixed with all sorts of quite interesting and innovative loops from other Shortwave related broadcasts, etc.

Did anyone else happen to hear this broadcaster? I think it was on Monday morning at around 0200 Z. I thought it was quite interesting that this individual chose our HF freeband channel instead of moving up the band to the usual 6925 kHz frequency. Perhaps it was one of our own members, but so far he/she hasn't said a word claiming responsibility. I heartily encourage any pirate broadcast activity on 6.8 MHz, as it will surely attract attention to our quickly growing group of phun-loving phreekin'cy radio renegades.

Rest assured, I am NOT a "Troll". I've been here on Usenet too long to waste my time trolling for reactions to controversial postings. As the title of one of Weather Report's last recordings, "This is This", and what you see is what you get. Please forgive the mixed metaphors.

All ham radio operators, CB'ers, SWL's, professional broadcast engineers, on-air talent, station owners, and anyone else interested in clandestine radio operation is highly encouraged to join in on the phun. Heck, you don't have to be a "techie" or any type of radio guru to join in on the phun. Just be smart about it if and when you choose to operate. Not that Uncle Charlie seems to care one way or another about 2-way communications in general (as long as they're not interfering with established and licensed entities), rather, their main interest seems to be in anything consumer-wireless related, like wireless toothbrushes, wireless beer pourers, wireless wires, etc. You get the idea. Two way radio is low on their priority list, thankfully.

Enough banter. Did anyone hear the broadcaster? Or, has anyone heard any of our members on the above mentioned phreekin'cies? Listen up! We're here, we're there, we're everywhere! And, by jinkies, we're having a ball.

Thanks to all for the constructive and informative discussion. I wish I could say that it has helped to solve my problem but I'm still wrestling with it. The low frequency circuit analysis by Spice, Bode and Nyquist plot are beyond my capacity but I have had some excellent help from Dave, off-list, who eye-balled the DX-394 schematic and my mod. We identified decoupling networks and what I assume to be AGC 'delay' networks and tackled it on the basis that reducing the time constants of the larger ones should reduce the low frequency phase shift that could be contributing to the problem. The opposite occurred - increasing the 'delayed AGC' time constant reduced the instability and effectively slowed the attack, especially on the RF front-end. More or less the same effect was obtained by slowing the attack in the attack network that affects all stages.

I believe 'delayed AGC' means a slower or delayed attack at the RF stages; in the DX-394, there is a R-C network adding maybe 15 ms to the attack on the AGC line affecting both the 1st mixer and the drain-source current of the RF preamp and a second network adding maybe 10 ms on top of this affecting the AGC gate of the RF preamp. I've doubled that first time constant and doubled what I would like in my attack and release networks in order to get the fastest stable speeds which I guess would be on the order of 20-40 ms attack and 50-80 ms release.

My mod has a FET amp/buffer at IF driving the heck out of the diodes so that should be fairly linear. I have adjustable gain at the output of the detector/attack filter. I don't think BFO interference is an issue; I don't notice any great difference in stability with it on or off - there are separate envelope and product detectors.

I'd welcome any more input. The base DX-394 schematic is at http://www.monitor.co.uk/radio-mods/dx-394/dx-394.htm and I'd be happy to send anyone the schematic of my mod.

73, Tom

If all you are interested in is 2-way communications then why don't you
get your ham ticket?

Pirates are a different story as a broadcasting station and license are
a much larger cost and a lot more effort to get.

The 7030 has a metal case and so is shielded. This looks like a good
case of the BCB station coming in on the power cord through the house
wiring. With the 50 ohm resistor on the antenna terminal use a RF choke
on the DC power cord to the radio to see if the AM station goes away.
Same should work for any other radio that has a metal case.

The non-shielded radios may have the RF go through the case as an
additional path to consider.

Telamon
Ventura, California

I can only wish I had my own 2030+. This was a borrowed unit
from a friend who was wrapping up the sale of her family farm
after graduation. I did try to place several ferrite RFI "snap on",
and while I could reduce the interference, even with over 10
on the power cord I still had a very weak signal on 770 and the
770+590.

I was really suprised by the R390 and R392. In these receivers
the RF was getting in through the audio line. High level RF is hard
to completly supress. At least the 770 station cleaned up their
harmonics. A nice letter with the comment that I would hate for them
to get fined for improper operation got the problem solved within
a week. The 1540, 2310 and 3850 were very strong.
No 4rth harmonic at all.

A high pass filter ruled out my receivers.

I wonder how many people have MW ingress and don't know it.
Sometime "real soon" I am going to psot the results of my RF
week end and how bad normal single or double brain only coax
is. By bad, I mean allows LW/MW and HF if any stations are
close or strong enough to leak in even with out an antenna connected.
I tested 100' of various good quality (Belden) coax. and one run of
200' (borrowed) run of triax.

I considered this, but I think the problem is too severe...especially since the HF-150, with its notiously weak front end, is not as badly affected. Also, tonight I noticed an image not just of a powerhouse broadcast station here in NYC, but of a relatively strong shortwave signal (Radio China International). I think a little bench time is required to correct this problem.

Describe your antenna.

Does your antenna have any mechanical connections that could be lose or
have rust between conductors?

Besides poor connections forming diodes out of oxides it could be that
your antenna is exceptional at picking up AM broadcast band. Are any
over S9 when tuned in?

Rick Kunath wrote:
Is there any possibility that you have the rear-panel pre-amp turned on
in
the 7030?

What happens when you add in 10 dB or so of attenuation?

Rick Kunath

Preamp was off.
Attenuation didn't mater.
It was reduced with a 50 Ohm termanator on the antenna
port but not eliminated.

Wasn't bad enough to be a problem, after all if a R390 and the R392,
completly shielded in a tough aluminium case with 4 1/4" bolts per side
of the front pannel, that amke good contact witht he front panel and
the
case, both received the 770KHz signal, I wan't suprised the 7030+
and almost every other receiver I have tried picks it up.

I would consider selling a kidney tonight, if legal, to get one. I
LOVED
the receiver. Sadly the ARM and QRN noise floor is my limiting factor,
even my R2000s don't reach their internal noise floor because of the
external crap.

But the selection of filters, the synch detector, tunning steps,
optional
PC control make the 7030+ my dream receiver. At my QTH any signal
I could receive with the 7030+ I could receive with either of R2000s.
But the synch detector is magic. The better filters allow listening to
weak signals that will give you a head ach on the R2000s. Signals
that are dificult to impossible to understand on the R2000 are hard
much easier to understand. I can't explain the difference, reminds me
of the tube/valve HiFi debate, but I will never be satisfied unitl I
have
my own 7030+. Even with similar bandwidths the 7030+ is the clear
winner. And it isn't just a pahse noise issue. Comparing it to a R390
and R392 in a friends fairly RFquite country home, the 7030+ beat
the R390 and R392 in weak signal "understandability". I don't have
a scale to measure it, or even words to really discribe it, but the
7030+ is just "cleaner". The R39X have "no" phase noise. I had
always writtensome of the less then perfect weak signal performance
of the R2000 to phase noise. I now know that isn't the whole story.
Don't get me wrong, for what I have in my R2000 they are great

receivers. Kind of like comparing a Toyota Camray to a Lamborghini. The Camray will get you there, but the Lamborghini will really get you there.

The only improvement for the AOR 7030+ that I can think of is a 90% price reduction.

I would gladly trade my PCs and all of my radios, ham gear included for a 7030+.

You're lucky I never throw anything away.

A review of this radio appears on page 100 of the 1993 Passport ot World Band Radio. It is also known as the Sangean MS-101 and the Roberts R101. It received one and a half stars.

Price: Sangean: $84 in the United States, CAN$99.95 in Canada, $65-125 in Europe (EC), and AUS$99.95 in Australia; Aiwa: $109.95 in the United States.

Advantages: Inexpensive. Travel power lock. FM stereo through headphones.

Disadvantages: No digital frequency display. Limited world band coverage. Mediocre adjacent-channel and spurious-signal ("image") rejection. Inferior audio. Dial not illunminated. No meaningful signal-strength indicator. No AC power supply.

Comment: Aiwa styled differently from other versions of this model.

Bottom Line: A low-priced, plain-vanilla portable of interest almost exclusively to the weight- and price-conscious traveler. Also sold under other names, inclucuding Curry's, Dixons, Goodmans, and Siemens.

2557. Impedance of pull-up whip on SW Receiver?

Newsgroup: rec.radio.shortwave
Date: 2005-05-29 03:35:59 UTC
From: John Smith <assemblywizard@gmail.com>

I have a Grundig YB-500 (Yacht Boy 500) shortwave portable. I frequently take it to remote locations with me and have enjoyed the radio for years. It has a short pull up whip antenna, all I have done in the past is to slingshot a long wire into a tree and use a clip lead to attach it to the pull-up whip (no external ant connections on the radio).

I was wondering what the impedance the collapsed whip would present, and what sort or a balun/auto-transformer could be used between a longwire (or other ant), gnd and the pull-up whip to improve reception...

... anyone ever done any experimenting or unique ideas?

Warmest regards,
John C. Smith

Hmmm, I have googled Richard... but not found anything other than standard baluns/auto-transformers and all too boring methods of using them... and yes, I could go expermenting on my own with these--was mainly hoping someone has walked this path before and already gleaned the best method, or at least could get me ranting, raving and thinking!!! <grin> My bark is MUCH worse than my bite yanno....

I didn't mean what the capacitve reactance of the pull-up whip was--itself, I meant to mean the input impedance which the input at the bottom of that whip expected to see...

It seems obivious they have provided some +J Ohms just past the bottom of that whip (or maybe not?)... however, input be high impedance and 1K+ ohms--and some non-reactive load could be assumed to be expected by it?

Warmest regards,
John

CW as a requirement for access to HF was dropped as at 01 Jan 2004. There has not been the expected massive increase in amateur licences - I think that VK currently has around 10,000 licenced amateurs (plus or minus a few) - with numbers pretty stagnant/decreasing slightly. I feel that there has been enough time for the expected increase to be visible, but this has yet to occur - maybe the majority of those with an interest in radios already have their licences, or lost interest in the subject - who knows. Onto another part of the thread - age. Most amateurs are older - when I took out my licence aged 23, I was one of the youngest around - going to the first club meeting, I was somewhat dismayed to see that I was the youngest by at least ten years, but at least I had lots of experience to learn from. Nowdays (ten years later), I am seeing young people getting into the hobby, but not in the numbers that I would like to see, nor in the numbers that we need to have a healthy population. Buggered if I know what to do, but the new foundation licence that is due to come in (not sure when as the date seems to continue slipping right) has great promise to at least increase numbers.

The 7030 has a low-pass image reject filter that cuts off just above 30MHz, a low-pass filter that cuts off at 1.7MHz, and a high-pass filter that cuts off at 1.7MHz, so MW bleedthrough shouldn't be a problem.
If there is enough interest, I will market a 7-band preselector. This will consist of a low-pass filter for the range below 500kHz, with bandpass filters for the ranges above 500kHz.
I will use PIN diodes for range changing. Interested parties can e-mail me directly and we can go from there.

I'm using a Wellbrook 330S antenna and I don't think it's suffering from any problems. I use it with my other receivers and they seem to function well with it. Occasionally there's overload on the HF-150, but it's always pretty minor, not like what I'm experiencing with the 7030. This makes me suspect the problem isn't with the antenna. I can even connect my SW77 to this antenna without getting the kind of overload I'm finding on the 7030.

Steve

And you had to post a 170 line message to pass on 4 lines of
information? This goes from boring to lazy.

The capacitive reactance comes free with the whip.

You will drum up a 100 responses on what's better - what is odder is
that all those great ideas haven't become ordinary after 50 years or
more. And after, what, 17 - 18 years? no one's figured out how to
power NYC with a Zippo's full of cold fusion either. Strange thing
about invention - doesn't seem to work all the time (or worse,
anytime).

Tom,
I haven't been following this thread. However, in my understanding,
'Delayed AGC' doesn't refer to a time delay. It normally means that the
AGC in the RF stage doesn't cut in until a certain level of signal is
reached. AGC is applied as 'normal' to the IF stages but the RF stage is
held at maximum gain until the input signal is higher. The effect is to
obtain a better signal-to-noise ratio with low-level signals.

OK, it is not likely that this type of antenna would have the problems I
mentioned and the fact that another receiver you own does not seem to
suffer the same problem points away from the antenna being the problem.

As Pete has mentioned the 7030 has front end filtering but depending on
its age those front end filters could have a problem with the elements
they are made of and at one point were "upgraded" by AOR. The inductors
on some early units had inductors that would saturate and I don't recall
what the problem was with the capacitors but both were changed. Maybe
you have the inferior inductors and capacitors in the front end filters.

Pete already gave the link to the bulletin page but specifically I point
you to this http://www.aoruk.com/7030bulletin.htm#ip3

He was a genius. He was responsible for the AC power grid that powers nearly everything these days not to mention the AC induction motor on three phase power. He envisioned how the motor would work in a flash of inspiration.

The concept of generators and transformers was already worked out. He came up with the realization of stepping up the voltage for long range transmission and coming up with the concept of the induction motor, which made the whole string of ideas that make up the electrical grid practical.

This alone means he was not suppressed but that does not mean he did not have his share of problems. The fact that he was not the usual egotistical type of person for an inventor did not help him get the recognition that he deserved.

Tesla used a primitive electromagnetic wave scheme of several tones for remote control before Marconi ever demonstrated EM wave propagation and there is a whole lot more like discovering X-rays.

Sorry to disappoint you John.

Nobody has ever made a significant improvement using aligator clips, lengths of wire and baluns on a portable whip receiver. Except, if lucky, merely by chance on one band at the expense of the others.

You may, however, hear a bunch of claims, e.g., by CB-ers and plagiarising old-wives, based on imagination and wishful thinking.

Signal to noise ratio is what matters. And that's an uncontrollable function of the incoming signals and noise. the ionosphere, and of the receiver itself.

However, it's quite interesting to experiment with longer antennas. Obtain a circuit diagram of the receiver and try to predict what will happen - if anything.

A most elementary circuit analysis is all that's needed. Otherwise you will be working entirely in the dark.

Clear your head and forget about a balun. You must have been reading the wrong magazines articles. You are dealing with an unbalanced-to-unbalanced, very high impedance-to-high impedance situation.

Consider a ground conection to the receiver chassis. This lowers the impedance to more predictable values. OK if you are located conveniently near to a domestic plumbing system. But even a short rod in good soil will have some effect for either better or worse.

If you insist, signal to noise ratio MIGHT be improved by using a single adjustable LC tuned circuit as a pre-selector in conjunction with a length of wire and a ground connection of some sort. But it might have an adverse effect.

My guess is that you will end up with a new, Japanese, very expensive, battery-operated, communications-grade receiver at the end of a 100-feet length of 18-gauge magnet wire. Even if the wire is just strewn on the ground.

Wait a bit and Chinese, equally good, 1/2-price versions may become available.

Economics provide the foundations of all engineering. If you don't understand economics then you don't understand anything. Not even SWR or the portion of a dipole from which most of the radiation is supposed to occur.

Regards, Reg.

I don't think a year is really long enough to tell. In addition, is the word getting out to prospective hams? Did the decrease in numbers come from lack of interest on the part of prospective hams or the failure to find prospective hams? Changes in licensing will have no noticeable impact when people don't even know that ham radio exists or barely know it exists but have no idea what it is all about.

Seems to be audible here with Christian music and did catch a mention of Papua New Guinea during the half hour prior to 1100. I'll have to catch them earlier rather than my regular routine of listening to the guys on 3849-50.

If you are into RACES/ARES or the like, then Ham radio is very useful. What happens when the cell towers, twisted pair & trunked radio systems are overloaded or damaged in a disaster? That is where ham radio can shine. Also it may not be "high tech", but when you build you own Yagi or cubical quad antenna & know that you have to think a little bit to make communication in a certain country (what band to use to make the hop) takes some thought vs. cell phone & internet which takes very little thought. My .02

Maybe some mullah will set up a public bible burning
in retaliation.
Then the christians can retaliate and burn Qurans.
Then the mullahs can retaliate and have an even bigger
bible burning.
The the christians can retaliate by having an even bigger
Quran burning.
And so on while the rest of us go get some marshmallows.

Yeah, but don't they claim somewhere that their target audience is
Canada or Mexico or such? Wink, wink. Say no more.

Hmm - on their web page they say essentially the Western Hemisphere.
(North and South America and the Carribean)

http://www.rwonline.com/reference-room/special-report/05_rwf_shortwave_2.shtml

[quote]
Second, in the United States, the SW bands are reserved for
international broadcasters.

"When the Voice of America was founded in 1947, it was prohibited from
broadcasting domestically, in order to prevent the government from
propagandizing to its citizens," says Larry Magne, editor in chief of
"Passport to World Band Radio."

"The FCC decided that if this rule applied to the VOA, it should also
apply to domestic shortwave broadcasters as well."

Fuzzy business model

However, according to NASB President and WRMI General Manager Jeff
White, the FCC's restriction has an important loophole.

"The current rules do not say SW stations cannot broadcast to the
U.S.," he said. "They say stations cannot broadcast programs that are
intended exclusively for an audience in the continental United
States."

As a result, U.S. shortwave broadcasters typically target countries
such as Canada and Mexico, with their signals coincidentally
blanketing any U.S. territory that happens to be in the way.

For instance, WRMI's 50 kW North American feed originates from a
Florida-based periodic yagi antenna pointed towards Vancouver at 317
degrees.

"With this heading, we manage to legally cover virtually all of the
continental United States," White said.
[close quote]

Hmm - does that mean that an 800 # heard on a U.S. shortwave station, especially in an ad, has to accept calls from Canada or maybe from other countries in the +1 country code such as the Dominican Republic and Grenada?

No expert here, but I once read he was responsible for the sixty cycle per second frequency in use for distribution. The Europeans went with fifty, most likely because it was more 'metric'.

Sixty cycle per second, Tesla may have said, is much more suited for electric clocks. It's easier to design the clock gear ratios when you're using multiples of 60.

Someone supposedly asked Tesla what he thought of the statement allegedly made by Edison, that "Genius is one percent inspiration and ninety nine percent perspiration". Tesla replied that if Edison had a better education, he wouldn't have had to perspire so much.

The US radio patent was finally given to him in the forties, if I recall. He had been fighting it out with the Marconi people for years. The schools STILL teach that Marconi was the inventor of radio.

Sadly, he was royally screwed by both Edison and Westinghouse. They would have owed him and his estate trillions by now if they were honourable companies.

The only reason he may be mistakenly seen as a 'nut' may well be due to the lunatic free power fringe who have attached themselves to his name.

"Before the internet and cell phones, we had television and regular
phones. "
JS> That is true, we did have television and land line telephones,
with all of their inherent limitations. But the internet provides a
range of communication that is unmatched by any other method of
communication, including 13 channels of VHF, a smattering of channels
on UHF on TV and rotary dial phones.

> Why go through the hassle of getting a license and radio
> equipment only to find out that the people you work and play with are
> not on the bands.

"??? I guess your outlook and idea of what Ham radio is is to
chat with
your buds? In that respect, you are probably correct. If all you want
to
do is *that*, you are better served by chat rooms or the telephone. Why

on earth anyone with that as their main interest would become a ham is
beyond me. Ham radio is not the best hobby for that, although we can do

that. "

JS> Communication is what amateur radio is about...people talking with
one another usually about everyday things or as you say "chatting with
their buds". And it is about the camraderie of people enjoying and
talking about their equipment. And how could we forget band congesting
contesting - how many people one can have a 5 word conversation with
over a set period of time. The hobby isn't about providing useful
emergency communications however. The last time I heard a hurricane
net it descended into chaos with hams trampling over one another trying
to be the first to contact someone in the emergency area. Hams have
not "saved the day" other than in their dreams for a long long time.

If ham radio is about something else, please inform me as well as the
potential hams who see amateur radio as little more than an expensive
and self-limiting way of talking to one another. Or said another way
if you stripped the communications aspect from the hobby what would be
left. And how many people would queue up for licenses?

Hams take a cavalier attitude when it comes to explaining the value of
ham radio, they end up driving the young new entrants away. They find
it difficult to consider new ways that might attract new blood into the
hobby. Hams have to be able to explain what the benefits of being a
ham are. Unfortunately most adopt a bunker mentality that goes like

this: "The requirements are what they are because I had to take them long long ago. Yes morse code is important, but I really can't tell you why. If you have to ask what the benefits of being a ham are, then there is a good chance you won't enjoy being a ham. Please consider another hobby."

I have heard R. Victoria on this frequency before, so I think you are correct on the ID. When I heard them (?) I did get a positive ID and heard street routes given for a demonstration for disabled people that matched names of principal streets in the southern cone (Villa el Salvador) of Lima.

I am not sure of their transmitter site, but almost every emisora in Lima is sited up on Morro Solar, a small mountain that projects into the sea south of Lima. It is quite prominent, and was strategic enough to have been the site of one of the major battles for Lima during the Chilean invasion of 1879.

Ouch: How do you spell clueless? I loves you dearly Michael, you're a very nice guy and yer heart is in the right place but you have this frustrating penchant for getting over yer head at warp speed when discussions turn to even moderately deep-end techie sorts of topics. You done it again.

This guy is obviously into low-band weak signal dxing on 160/80/40 etc. Those of us take this game seriously understand what it takes in the way of rcvr performance. He's talking about using his modded R4-C as an outboard RX because of it's legendary front end performance, it's blocking dynamic range and it's third order intercept points as they relate to successfully dealing with very difficult band conditions. Which leaves out your Heath treasures and all members of the FT-1000 clan in this particular pursuit.

"If the tube stuff is better, then I'd go for it in a minute" eh? Welp there ya go.

Can you please elaborate, Jim, on your assertions that Chinese workers now
have
"more freedom... than they have ever had in the entire history of China."

Perhaps you will be so kind as to define YOUR definition of "freedom"
before
you answer.

So Steve,

does the 7030 feel a lot like the 150 since Mr.Thorpe designed both? Can
you see a lot of the 150 in it? Do you think the 7030 is worth that much
more then the 150? Would you call the 150 the "poor man 7030?"

Lucky

MAKE ALOT OF MONEY!!! NOT A SCAM PLZ READ Posted By: JASON
Date: Tuesday, 30 May 2005 "Hi, I'm 23 and I make more money than my
parents and so can you" Turn $6.00 into $60,000...read this to find out
how!!! READING THIS COULD CHANGE YOUR LIFE! I found this on a
bulletin board like this one and decided to try it. A little while
back, I was browsing through a newsgroups, just like you are now, and came
across an article similar to this that said you could make thousands of
dollars within weeks with only an initial investment of $6.00! So I
thought, "Yeah right, this must be a scam", but like most of us, I was
curious, so I kept reading. Anyway, it said that you need to send $1.00
to each of the 6 names and address stated in the article. You then
place your own name and address in the bottom of the list at #6, and post
the article in at least 200 newsgroups. (There are millions) No catch,
that was it. So after thinking it over, and talking to a few people
first, I thought about trying it. I figured: "what have I got to lose
except 6 stamps and $6.00, right?" Then I invested the measly $6.00.
Well GUESS WHAT!!... within 7 days, I started getting money in the
mail! I was shocked! I figured it would end soon, but the money just kept
coming in. In my first week, I made about $25.00. By the end of the
second week I had made a total of over $1,000.00! In the third week I
had over $10,000.00 and it's still growing. This is now my fourth week
and I have made just over $42,000.00 and it's still coming in rapidly.
It's certainly worth $6.00, and 6 stamps, I have spent more than that on the
lottery!! Let me tell you how this works and most importantly, why it
works.... Also, make sure you print a copy of this article NOW, so you
can get the information off of it as you need it. I promise you
that if you follow the directions exactly, that you will start making more
money than you thought possible by doing something so easy! Suggestion:
Read this entire message carefully! (print it out or download it.)
Follow the simple directions and watch the money come in! It's easy. It's
legal. And, your investment is only $6.00 (Plus postage)
IMPORTANT: This is not a rip-off; it is not indecent; it is not
illegal; and it is virtually no risk - it really works!!!! If all of
the following instructions are adhered to, you will receive extraordinary
dividends. PLEASE NOTE: Please follow these directions EXACTLY,
and $50,000 or more can be yours in 20 to 60 days. This program
remains successful because of the honesty and integrity of the participants.
Please continue it's success by carefully adhering to the instructions.
You will now become part of the Mail Order business. In this business your
product is not solid and tangible, it's a service. You are in the
business of developing Mailing Lists. Many large corporations are happy
to pay big bucks for quality lists. However, the money made from the
mailing lists is secondary to the income which is made from people like you
and me asking to be included in that list. Here are the 4 easy steps

to success: STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the phrase "PLEASE PUT ME ON YOUR MAILING LIST.", your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses: #1)S.R. Johnson : 3285 Lewis Ave. : Signal Hill, CA 90807 #2)B. Hooper : 3 Warringah Gve. : Petrie, QLD, Australia 4502 #3)Matthew Speight : 6 Charnwood Ave. : Belfast : N. Ireland : BT15 5DH #4)Andrew Hunter . 7520-1 South Aragon Blvd . Sunrise, FL 33313 #5)Salvatore De Luca . 102 Overlook Ave . North Haledon, NJ 07508 #6)Marc New, 1/7 Sinclair Gardens, Edinburgh, Scotland, U.K. , EH11 1UU. STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list. STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 2.4million groups) All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This

will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to. Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.** Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still ONLY 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. REMEMBER, PLAY FAIRLY AND HONESTLY AND THIS WILL WORK FOR YOU!!!

>course--have to mimic that capacitive reactance you mentioned...

And you had to post a 170 line message to pass on 4 lines of information? This goes from boring to lazy.

The capacitive reactance comes free with the whip.

You will drum up a 100 responses on what's better - what is odder is that all those great ideas haven't become ordinary after 50 years or more. And after, what, 17 - 18 years? no one's figured out how to power NYC with a Zippo's full of cold fusion either. Strange thing about invention - doesn't seem to work all the time (or worse, anytime).

Aye Reg--economics rules the world... except my very own bench... and then it is my wallet and "tight a$$ nature"... I am little better than those buggers who want to keep all the money for themselves! <grin>

And, you are right again, I have been reduced to the humble L-tuner in the past... and it does work ok...

For the radio gnd, in the past, I used a modified plug into the "record" jack which is available, and use its gnd connection(from the gnd on that plug--which "seems" to actually be hooked to circuit board ground, special screws hold the back on the radio which I do not have a tool to remove (similar to an "allen wrench"--but different)--and never looked hard for one--or machined one,for the L-Tuner, however, a modest gain in performance seems to be realized by using a real earth ground, even to the point of being able to pull the radio ground while still realizing the benefit, and a modest adjustment of the L-tuner--I expect EXTREME impedance at the whip--even touching the whip degrades signal reception drastically--when other ant is hooked....

I simply measured the gnd I get from the "ground plug" I am using to the neg of the batteries, they are at the same level, and I decided to call that close enough to call gnd...

Warmest regards,
John

Sorry to disappoint you John.

Nobody has ever made a significant improvement using aligator clips, lengths of wire and baluns on a portable whip receiver. Except, if lucky, merely by chance on one band at the expense of the others.

You may, however, hear a bunch of claims, e.g., by CB-ers and plagiarising old-wives, based on imagination and wishful thinking.

Signal to noise ratio is what matters. And that's an uncontrollable function of the incoming signals and noise. the ionosphere, and of the receiver itself.

However, it's quite interesting to experiment with longer antennas. Obtain a circuit diagram of the receiver and try to predict what will happen - if anything.

A most elementary circuit analysis is all that's needed. Otherwise you will be working entirely in the dark.

Clear your head and forget about a balun. You must have been reading the wrong magazines articles. You are dealing with an unbalanced-to-unbalanced, very high impedance-to-high impedance situation.

Consider a ground conection to the receiver chassis. This lowers the impedance to more predictable values. OK if you are located conveniently near to a domestic plumbing system. But even a short rod in good soil will have some effect for either better or worse.

If you insist, signal to noise ratio MIGHT be improved by using a single adjustable LC tuned circuit as a pre-selector in conjunction with a length of wire and a ground connection of some sort. But it might have an adverse effect.

My guess is that you will end up with a new, Japanese, very expensive, battery-operated, communications-grade receiver at the end of a 100-feet length of 18-gauge magnet wire. Even if the wire is just strewn on the ground.

Wait a bit and Chinese, equally good, 1/2-price versions may become available.

Economics provide the foundations of all engineering. If you don't understand economics then you don't understand anything. Not even SWR or the portion of a dipole from which most of the radiation is supposed to occur.

Regards, Reg.

No their not preocupied with OT " Fox News, politics, religion and other OT
or borderline OT
subjects that have far less to do with SW listening " .
In my part of NA (North Carolina) the BBC has gelded itself.

ALL the "program stream" transmission time reductions have reduced the BBC
to a non player.

Only one broadcast on an FM outlet 120 miles away at 9AM on weekdays is
availble to me.
I can't find a variety BBC programming available at convenient times.

2625. Re: 7030+ front end

Newsgroup: rec.radio.shortwave
Date: 2005-05-29 16:27:21 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1117384041.302778.132020@g44g2000cwa.googlegroups.com>
Source record: 23351

The case of the 7030 is very solid, like the 150's. The sparse controls on the front panel is also reminiscent of the 150, as is the solid tuning knob. Performance wise they're quite different. The 7030 is a DX machine and it feels like it.

My experience with the 7030 is still pretty limited, but I'd have to say I still favor the R8B overall. I don't mind the ergonomics of the 7030, but the 7030's sync detector, although it's very good, can't quite lock onto signals as weak as the ones the R8B's can snag, and often I find that it takes a fair amount of adjusting and knob twiddling to end up with a signal that's as good as the one you get right away on the Drake. But the 7030 is great and I especially like its notch filter. I'm sure lots of people would prefer the 7030 to the R8B, depending on their preferences and listening styles.

I hope we hear from John Thorpe again one of these days....

Steve

No expert here, but I once read he was responsible for the sixty cycle per second frequency in use for distribution. The Europeans went with fifty, most likely because it was more 'metric'.

Sixty cycle per second, Tesla may have said, is much more suited for electric clocks. It's easier to design the clock gear ratios when you're using multiples of 60.

Someone supposedly asked Tesla what he thought of the statement allegedly made by Edison, that "Genius is one percent inspiration and ninety nine percent perspiration". Tesla replied that if Edison had a better education, he wouldn't have had to perspire so much.

The US radio patent was finally given to him in the forties, if I recall. He had been fighting it out with the Marconi people for years. The schools STILL teach that Marconi was the inventor of radio.

Sadly, he was royally screwed by both Edison and Westinghouse. They would have owed him and his estate trillions by now if they were honourable companies.

The only reason he may be mistakenly seen as a 'nut' may well be due to the lunatic free power fringe who have attached themselves to his name.

Hmmm, I replied before looking at the pic you provided, just which of those jacks do you think is an antenna jack?

Top is head phones, next down is line out level audio, next down is mic level audio and next one is power--that is exactly like mine--and none of those are an antenna jack!

Warmest regards,
John

Here is a way out solution.

To avoid the pumping try the following as a last resort:

1. Increase the agc filter cap. value. This by itself will decrease the agc attack time, but if you lower the charging source resistance you can again decrease the attack time. This change may require two emitter flowers in series to lower the charging source resistance. (If 2 x .7 volts is two high of an offset try npn followed by pnp or select the optimum fet.) The object is to move the filter corner down in frequency and stop the pumping. At this point you have fast attack and very slow release.
2. Now add a second agc circuit in parallel with the first. It should have the attack and release times that you want. Compare the two agc voltages and when the second one is lower than the first by some small amount, activate an active pull down to discharge the large cap in the first agc filter.

This may be one way to isolate and stabilize the agc feedback .

Like so many other outright geniuses, Tesla's mind constantly
teetered on that edge between stunning insight/brilliance and wildly
impractical wacko/nutjob ideas. His contributions to the field of
electronics were tremendous and too little known or appreciated today.
But many of his pet ideas and theories also provoke rolling eyes to this
day. Perhaps some of them will someday be made practical, then he'll be
one of those geniuses who was simply well ahead of his time - but in the
case of a few of his ideas, it really isn't likely.

But a true genius in his field? Oh yes - there's way to much proof of
that to argue it.

Tony

He hurt his influence, authority and sponsorship when it became known that he had been laying the little ladies at the camp. I visited there and noticed that he placed a lot of PUBLIC emphasis on the virgins, even pointing out a few who were. He seemed to be a bit pre-occupied with the subject.

...But then to find, at least according to testimonies, that this was not a one time deal but had been going on for a long period of time with him supposedly telling one or more of the girls how to cause a spontaneous abortion - without telling them that's what they'd actually be doing!

...All the time telling the world that NOT ONE CHILD OF GOD HAD EVER BEEN ABORTED, or something to that effect, explaining that till God breathed the breath of life into them they did not become a living soul. Until they are born they do not breath. It sounds to me like he was trying to justify the action he was having the girls to take and possibly ease their minds or consciences should they realize that they caused the abortion / miscarriage by following his directions.

He still preaches a lot of truth but many folks expect him to PRACTICE what he preaches! Yes, God can still use him. He used a jackass one time. He's probably used some of us who were about as unworthy as the jackass.

I expect him to learn that he should have stayed with WWCR, at least part time. However, I suspect his pride will not allow him to ever go back. He probably feels they did him wrong by not continuing to "sponsor" him by supplementing his air time. Let's see if he gets the same listenership, support, etc. from the other stations, even though they may be a bit cheaper.

The world moves on!

The next chapter?

I really like the one I just bought, the KA1103.
It picks up so much more stations, and haven't even hooked up the long
antenna that came with it yet.
Plus your able to spin the tuning dial with one finger.
I took some time reading reviewson the radios and got some
good feedback here on the newsgroup before I bought it.
Picks up the Am pretty good.
Haven't read enough to figure the sideband, except for pressing the button
and going through the dial.
Haven't picked up any ham broadcasts yet, maybe I need the long antenna to
do that.

No way. The only thing that will happen is ultimately we will end up without
trees.

This, of course, will put a serious damper on the toilet paper supply.
Whereas if we maintain the status quo, the number of "Holy Books" being
printed today will supply our toilet paper needs, and we can continue trying
to renew the renewable resource of trees. It's like having your cake and
eating it too. Balance, you see.

I hope so too especially now that Drake has bowed out of the market.

I generally like my 7030+ it is a cool radio and has some features the
Drake R8B does not have like the auto notch, auto filter calibration and
a remote control but I like the Drake R8B more the way it operates and
it generally seems to do a better job of making weak signals listen-able.

I own three table tops RX340, Drake R8B and the 7030+ all of which I
like for different reasons. They are all great radios and I'm pleased to
own all of them.

Try clipping the pull-out antenna to a ground rod.
For some reason, that seems to work better than a long slingshot.
I tried Slingshot -kiddie antennas once and found a ground wire works better
for portables.

Meters are wavelength, which helps put frequency of operation in
perspective when you talk about antennas, transmission lines and other
receiving components.

If people don't want information in meters they should speak up like
you have and if enough do then I'll drop the terminology.

Wave length in meters is just the inverse of frequency.

Source record: 23386

I just got one yesterday for CDN$90 from Durham Radio (that's about US$72). Good, accurate review by John S. I would add:

- the PLL is rather squishy meaning that, when you are tuning in SSB mode and can hear the heterodynes caused by the BFO, they don't snap in 1 kHz steps but sort of fast swoop with a tiny warble until locked
- scanning speed is slow
- it's a little annoying that when you start scanning outside one of the 'meter' bands, the scan ultimately gets captured by the first meter band it encounters. It would be nice to be able to set two frequencies for scanning to run between.
- I'd like a bit more range on the Fine Tuning control than the +/-1.5kHz (estimated). +/-2.5 kHz would probably be optimal with the 'narrow' 4kHz filter. To shift the filter to favour the lower or upper sideband, you tune the radio higher or lower in frequency and shift the Fine Tuning control to restore the pitch. This provides modest 'single signal discrimination'.
- the sharp filter is surprisingly good at suppressing adjacent channel interference; if interference is on one side only, tuning to the other side by 2kHz knocks it down quickly.
- images and intermod interference abound, even with the telescoping antenna. I have not checked everywhere but the 26-30MHz range has combinations of many SW and probably MW stations.
- I was pleased to see its automatic memory remembers not only the last frequency tuned in each meter band but also the mode - if it was SSB, it recalls SSB; the user stored memories also recall the mode.
- there is no autoscan of memories, seems to default to the band that the current memory frequency is in.
- tuning seems accurate - in SSB mode, tuning to reliably accurate stations such as WWV on 15MHz and local MW broadcasters, set the Fine Tune to zero beat or a low pitch audible tone on one and then switch to the other (memory tuning is great for this). The beat note should be the same. It was for mine.
- I wish it would not revert back to AM mode every time you key in a new frequency. Of course, it stays in SSB when jog tuning. I guess I'll have to program in one frequency in SSB for each one of the ham bands to be able to jump between them and stay in SSB mode.
- I agree that the retro analog dial is a waste of space that could have been used for better button layout.
- I'm impressed with the 'fit and finish'.
- great value for the money!

Tom

At 1400 UTC Radio Australia at 53 N, 102 W, Central Sask Cda, all signals intended apparently for Asia. Using Icom R-75 w/ 100m aerial on the house eaves.
5995 - outstanding reception with very small amount of static only.
6080, 7240, 9590, 11750 - all audible, with attentive listening could be understood.

Radio New Zealand on 6095 was not as good as R Aus on 5995 but better than the other freq's for R Aus.

Lots of Spanish everywhere today. N-S propagation was v good. E-W not very good, not even signals from 500 miles distant, like Calgary Alberta on 6030 - could tell there was something on, but that's all.

6$ into 60,000 $??

Lets see.....Buy a cheap 6$ knife......Stab someone that has a gun in the back and take the gun.....

Rob a bank

(At least Its a little more honorable than the chain letter!)

< Snip >

He responded to your post that way because you are full of it. Most of
what you posted is either wrong, off topic or unhelpful. Take your
pick.

Just about anyone reading rec.radio.shortwave has connected some wire
to a portable radio and gotten an improvement in being able to hear a
weak signal.

About the only right, on topic comment you made out of a long post was
about signal to noise being most important factor in the receiving
antenna system.

AND...

I'm not somebody's old wife.

I'm not a CB'er.

I have a clear head.

I understand how BALUNs work.

I did not imagine it or indulge in wishful thinking and the improvement
wasn't just by chance.

I'm not waiting to buy a Chinese portable.

I understand the economics of electronic engineering.

Since most of your 119 line post is pure disregard for anyone else's
experience or opinion I may have missed some.

If you can't make a non condescending on topic post then go away please.

JIM,
.
I would say the 'some' Chinese Workers have
more Disposable Income then they ever had
in the modern History of China.
.
As to the Freedom(s) both Written and Real
(Actual Human Rights) of the Citizens of China.
Many would say that the average Chinese Citizen
(the common man) had more Freedoms and
Human Rights under the Sun Yat-Sen Republic and
later Kuomintang Government of Chiang Kai-Shek.
.
Most knowledgeable people today would say that
the Taiwan (Republic of China) was the natural
successor to the former Kuomintang Government
of Chiang Kai-shek affords it's Citizens Greater
Economic, Political and Social Freedoms then
Mainland China (The People's Republic of China.).
.
it's a matter of political perspective and history ~ RHF

JS,
.
Take a look at the RF Systems AA-1 External
AM/MW and Shortwave Antenna "Adapter" that
is designed to be Hooked-Up to most 'portable'
AM/FM Shortwave Radios.
http://www.universal-radio.com/catalog/preamps/0902.html
.
A simple 4:1 or 9:1 Matching Transformer (UnUn)
built along the same lines should get the job done
and be cost effective.

He's posting in HTML with Microsoft Outlook Express 6.00.2900.2180,
which bloats the number of lines and sends the message twice, once in
html and once in plain text. Usenet is something else he doesn't
understand.

He's posting in HTML with Microsoft Outlook Express 6.00.2900.2180, which bloats the number of lines and sends the message twice, once in

html and once in plain text. Usenet is something else he doesn't
understand.

Really? He was just an employee, not a business partner so how was
it that "Sadly, he was royally screwed by both Edison and
Westinghouse."?

> The only reason he may be mistakenly seen as a 'nut' may well be due to the
> lunatic free power fringe who have attached themselves to his name.

He went insane after his first couple sucesses. Broadcast power
would stop you from using a radio or TV set, and the losses were
horrendous. The power is reduced by 75% every time you double the
distance.

An "Earthquake machine" that one man could carry? Come on, even YOU
have to see the insanity there!

Well, I wouldn't call that "freedom" in any sense of the word.
I would call that simply "wealth". Or in our discussion wealthier.

> China's economy has been growing at near double digit rates for the
> last 20 years.

Well Jim, that is certainly very arguable in the strict numeric sense. Of course China's double digit growth started from a base of, for all practical purposes, Zero. So that alleged double digit growth for the last 20 years only sounds spectacular. However, there are serious conflicting statistics related to energy consumption which doesn't support this phenomenal growth. In fact the energy statistics refute this "double digit" growth. But if I were a Central Government cadre I to would use smoke
and mirrors to attract as much foreign "Capitalist" investment as possible. Considering that my Central Government owned banks are all technically bankrupt... and my currency is not freely traded on the open market... and the average monthly salary is less than US$400 month...

There are only one type of statistics available and those are government allowed statistics. ALL statistics from the Beijing government are to be considered highly suspicious. Think Soviet Union. Not simply because it IS a Communist government, although that fact alone should raise the, ahem, red flag. The problem is that the central government sets a goal and the local cadres will never disappoint the central government. So these local cadres, in fear of losing their cushy socialist welfare state livelihood, will in every instance "massage" the statistics that are then forwarded to Beijing.

So, you see Jim in a free society statistics are simply statistics. In Communist China they are a "way of life".

Not at all. 'Intelligent design' proponents don't like science and admit it. They don't mind using their computers and cell phones but as soon as any scientific findings conflict with their bible, they cry foul. This was true in Copernicus and Gallileo's day (they were threatened with death for saying the sun, not the earth was the center of the solar system) and it's true now.

Yes, some of those real old timers were/are right on... I have always found that the proof is in the pudding, when you are working with a received signal... all the BS disappears... either that signal does increase or it does not--you are suddenly stuck in the REAL WORLD--either one design, balun, turner, ant is better, or it is not... you cannot fool that receiver, it knows how many nano watts is available immediately at its' input, or not...

... while not always the case, it usually proves that an antenna (if it can handle power, etc) which is good at receiving a signal from a certain direction/spot on the globe--will also transmit a equally good signal back to that exact same place... assuming that the receiver has the exact expectations of impedance as the xmitter... with receivers that can be very difficult to tell...

... swr meters/devices, when they "just happen" to coincide with delivering max power to the ant, are a GOOD thing... and it does help if you forget about SWR and just gauge the results in how many tubes you are flattening or high power rf transistor you are replacing (it is best if this number starts out at zero and remains there!)... and you are right, if x-watts come in to the final, x-watts (subtracting watts lost due to efficiency losses, etc) must leave that same transmitter--else you have a nice little heater for the shack...

Body handling: HTML body converted to readable text

That is the same as saying all politicians are the same as Hitler--some
are, some aren't--what is true is this--just like child molesters will
gravitate to schools and institutions where children are present to
molest--so will evil victimizers move towards positions of power where
they can harm others... gov't and religion are no different from one
another--right now some Jim Jones is attempting to get a religious
following together--and his counter part (a Hitler) is attempting to
gain an office to exact his evil deeds...

Not at all. 'Intelligent design' proponents don't like science and
admit
it. They don't mind using their computers and cell phones but as soon
as
any scientific findings conflict with their bible, they cry foul.
This was
true in Copernicus and Gallileo's day (they were threatened with death
for
saying the sun, not the earth was the center of the solar system) and
it's
true now.

Really? He was just an employee, not a business partner so how was
it that "Sadly, he was royally screwed by both Edison and
Westinghouse."?

> The only reason he may be mistakenly seen as a 'nut' may well be due
to the
> lunatic free power fringe who have attached themselves to his name.

He went insane after his first couple sucesses. Broadcast power
would stop you from using a radio or TV set, and the losses were
horrendous. The power is reduced by 75% every time you double the
distance.

An "Earthquake machine" that one man could carry? Come on, even
YOU
have to see the insanity there!

Like so many other outright geniuses, Tesla's mind constantly teetered on that edge between stunning insight/brilliance and wildly impractical wacko/nutjob ideas. His contributions to the field of electronics were tremendous and too little known or appreciated today. But many of his pet ideas and theories also provoke rolling eyes to this day. Perhaps some of them will someday be made practical, then he'll be one of those geniuses who was simply well ahead of his time - but in the case of a few of his ideas, it really isn't likely.

But a true genius in his field? Oh yes - there's way to much proof of that to argue it.

Tony

Actually, it may be, and it may have had nothing to do with that guy wire/ground wire you were visually looking at (well, not directly--and it serving as an antenna)... in the presence of VERY STRONG magnetic fields, rf fields can be dramatically warped and rf fields bent and focused... and, it is not uncommon to find hundreds of amps (in some instances thousands have been recorded), at a very low voltage, around such poles... but that is a whole different story which has not been investigated well yet...

DUH. I already have my "ham ticket", thankyouverymuch. You needn't tell me the woes of buying into the commercial broadcast industry, either; I'm well aware of the FCC's requirements for such activity.

The common thing about pirating, both 2-way, and broadcasting is... are you ready for this revelation? -- GETTING AWAY WITH IT. That's the PHUN of it, dear telamon.

Do yourself a favor and read up on the subject. Better yet, buy yourself a receiver, do some tuning around, and figure it out for yourself.

But thanks anyway for something we all already know. (DUH)

Again I pose the question, did anyone hear a broadcaster on 6.8 MHz AM or not? Simple question deserves a simple answer, no?

2708. Re: 7030+ front end

Newsgroup: rec.radio.shortwave
Date: 2005-05-30 04:32:49 UTC
From: Pete KE9OA <p.gianako@worldnet.att.net>
Message-ID: <RHwme.855907$w62.259582@bgtnsc05-news.ops.worldnet.att.net>
Source record: 23290

Those are all good radios. I never owned the R8B, but I have played with it, and it is a very good receiver.
I do have the AOR7030 (original version), along with the HF-150 and the HF-225. All of them sound similar, and have very similar sensitivity, except that the 7030 does have better IM rejection.
The HF-225 is similar in sensivity to the HF-150 with the exception that the HF-150 has better sensivity on the MW band when using the Radio Shack loop antenna. With a long wire, though, performance is very similar. The HF-150 does seem to have the best bass response of the bunch, while I would describe the sound of the 7030 as more "open and airy". I think this is because the 7030 has better treble response.
I think that the slight difference in sound is also because of that Plessey SL6700 I.F. system that the Lowe receivers used, although the TDA1572 that the 7030 uses is also a very good chip. I have been using the 1572 in my own designs for several years.....measured distortion on AM is .3% @1kHz @60% modulation index.
Even with the 7030's relatively open front end, I don't hear any MW IMD products on the LW band, while I do hear them on the HF-150. Still, now that I have added that Lumitex fiber optic backlight panel to my HF-150, it makes for a great bedside radio.

Oh well, you pushed a pet peeve button. Using meters for band designation
is either pointless nostalgia or a shibboleth, a secret password that
denotes group membership.

Source record: 23292

I had emailed the company doing the broadcast. They dont have a schedule
when the transmission will start, but they plan to put out PR right before
the broadcast happpens.

I plan to record it as I wont be home, I will be 70+ miles east in FN41 for
the VHF/UHF contest which i doubt the broadcast from Alpine will go that far

Don't mind teleprobe....I've dealt with him before.
When you look up rectal probe in the dictionary,
you find his picture.....He oft complains about
RRAA being a crib of inbred morons, but who
do I now see here at RRAA acting a total fool.....

""I don't like him one bit. I think he is a waste of time. He posts in
a
number of news groups that interest me and is the reason I don't post
in any of them. ""

Sheesh....
What a chicken@*$% whiner....I don't really care for Telamon too
awful much either, but you don't see me whining about it, or avoiding
his usual roost of r.r. shortwave....I just ignore him. I don't
killfile
anyone. Killfiles are for girly men that can't deal with confrontation.
Telly said he killfiled me months ago, so he shouldn't be able to
see any of this message....
MK

No, the problem is that google is masking email addresses in the newsgroup
archive. This started with the new interface that became the norm
back in December.

Over at google, they show it like:
From: "Pete KE9OA"
and in the body:
my e-mail address is: p.gian...@worldnet.att.net

I've heard that if one "joins" a group over there (an additional
step beyond registering to post) you do see email addresses, but
I've not tried that.

I suppose the only way to get around it is to use the link for
replying to the author, but I've not tried that either.

Michael

Sorry - I had the wrong email return address configured in Outlook Express - just fixed. I just posted the unit on eBay so it is no longer available for trading - sorry.

The listing is here:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5778533526&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1

I was looking to trade it for a nice portable(s).

You don't know what you're talking about. I've had maybe four bottles of beer in my life, and the only drugs I take are all prescription from the VA clinic:

Metformin.
Simvasatin.
Triamterene.
Linsopril

Its up to you to find out what these are for.

I have several prescription pain killers that don't do anything, so i don't take them.

I also have to wear surgiacl thigh highs to reduce the swelling in my legs, or I'll end up losing them to the diabetes.

You owe me a big appology. I am 100% disabled veteran (non sevice connected), but my mind is still sharp enough to see that you are grasping at srtraws to pull others down to your level. I don't wrestle woith pigs. I don't like the mud, and I can't walk. You're still upset that everone on news:rec.radio.amateur.homebrew shot down your blue sky ideas about receiver design and wouldn't design or build your "Modular Universal Receiver" for you. They saw right through you, and that you have no inkling of the work required to design and build a quality receiver, or the legal requirements to sell it. Like I told you on news:rec.radio.amateur.homebrew I have worked on reciver designs, built a TV station and a KU band receiver that's part of the International Space Station. It is a customized 700 series Microdyne/L-3com unit designed to run on the 48 VDC power supply aboard the ISS. We built it. Lockheed=Martin munted it in the specail aluminum rack case for the ISS and was resonsible for it being launched and installed in the rack.

I worked on the RCB-2000 DSP based telemetry reciver developed by Microdyne. It is fully programable, has a built in spectrum display and can

be remotly controlled by a 9600 baud or higher serial port, an IEEE-488-2 parallell port, or ethernet. The operatindg system is windows NT Embedded. Oh yeah! it cost about $80,000 nd its fully modular. How many do you want to buy? here is a link to the specifications.
http://www-te.tw.l-3com.com/PDF/RCB-2000.pdf

Have you ever done anything other than slander people online? You must be a very insecure little man to stoop so low.

Michael:

I don't owe you anything, I served my duty when there was a real war going on... I was just smart enough or lucky enough or both to have avoided taking any hits...

For some reason SOME hams get into some kind of weird "hero worship"--these hams do themselves no good, they do the hobby no good, and they certainly do no others any good, almost like the sports freaks do for athletes and sports...
This doesn't float in my book... the world is for the living, we here will all be dead soon, this is really someone else's world we are just using for a brief time span... get on with your life man!

The only reason I am in the industry at all is for the money and I would rather code than be a politician... people don't owe me anything, I am being paid--if you weren't--well, I just don't know what to say--maybe you should have asked for more...

Whatever the case, you will have to take what you got and move on, the younger generation will soon take on these reins--perhaps repeating these same mistakes... well, unless you plan on living forever--me, I am out of denial, I may have 20 to 30 years left, with luck, perhaps a bit more... too little time to waste on this foolishness... I suggest you take what little time you have left and make the best of it... whining and pi$$ing about does you no good, nor any other...

Warmest regards,
John

With a decent and high antenna with some gain it should be possible to
catch the transmission up to 100 miles away. At least there should be no
QRM....
If ionospherric conditions are fine it will likely be heard easier in
Europe than 150 - 300 miles from the transmitter site ... :-)
Ham transmissions on 6 mtr should be a good indicator.

Consider the times he lived in. The structure of the atom was still
unknown. When he said there as no electron, he may have meant that
there was no particle that carried negative charge. He may have felt
that electricity was actually a wave phenomena and not a particle.

Hmm.. Wonder why there aren't any consumer based dynamos with an
adapter to run stuff on. (A dynamo / recharge battery takes place
of a wal-wart transformer)

>I have no idea, but one guess at why you aren't supposed to use
>the radio while cranking is that the generator may be too noisy. Either
>it will interfere with radio reception, or they worry that the spikes will
>damage the radio circuitry.

I would think the generator kicks out a higher voltage (or spiked) which
would trash the radio. I guess the spring-loaded radios actually
unwind at different rates depending on volume?

Slowly cranking a generator so as to supply the correct effeciency
would really be annoying.

>That LED flashlight of mine says the same thing, don't turn the light
>on while cranking. But I've done it, and it's not damaged yet.

Would be interesting to see what one of them does when the radio
is played during the crank cycle.

> it serving as an antenna)...

Some traveling-wave antennas are wired "directly" to
ground at the far end. We are dealing with distributed
RF networks, not DC circuits. A DC ground wire 1/4WL
long is usually NOT an RF ground at all.

If one installs artificial ground circuitry between the
radio antenna and the ground rod, one can either attenuate
the signal or not depending upon the settings of the
artificial ground.

I don't take any pain medication. The strongest one I was prescribed
was Naproxen, but the doctor switched it to prescription Tylenol which
is useless so I don't take anything.

You slander my name and you don't owe me an apology? That speaks
volumes about your character, John.

I served during the Vietnam war era. I was sent to the US Army cold
weather test site in Alaska instead of Vietnam. The station in Vietnam
was destroyed a month after I arrived at Ft Greely, AK and the staff was
killed. On the other hand, you could freeze to death anytime you were
outdoors during the winter at Ft. Greely. Have you ever been on
survival training with little food, no tools and a few matches when its
-40? BTW, I'm heading to Highlands Memorial Park Cemetery in about a
half hour to pay my respects to those who didn't make it home from war.

What are you babbling about? I am not a "Ham" and I have no heros.
In my book a hero is someone who gives their life in an attempt to save
another. Like a local soldier we are trying to have a new school named
after who threw himself on a grenade and saved three of his buddies.
The "Politically correct" crowd is trying to block it, of course. They
are they gutless ones who would never serve their country in the first
place.

I visit the ham newsgroups to discuss receivers, parts and designs.
I understand the circuits down to the component level and have made a
lot of improvements in mission critical receiver design. I work from DC
to 11 GHz, design embedded controllers and wrote the support software.
What have you designed?

> This doesn't float in my book... the world is for the living, we here

I may not be able to work full time but like I've told you before, I
collect and repair computers to give to disabled and disadvantaged
Veterans here in Marion County, Florida. This is being done along with

the Marion County "Vets helping Vets" program, the local newspaper and some radio stations. I am teaching high school kids and some adults to fix the computers, and we give them away for free. I am working on a website to list what is available to veterans, and where to go for help. What do you do for your fellow veterans?

> The only reason I am in the industry at all is for the money and I would

The love of money is the root of all evil, and explains a lot of your bad attitude.

> Whatever the case, you will have to take what you got and move on, the

It seems to me that you're the one "Whining and pissing" about your life. You took a job "For money" That's prostitution in my book, John. I have never taken a job "For the money". I have turned down better paying jobs that didn't appeal to me including one where I would have been flying all over the world installing video systems in nightclubs. I took jobs for a challenge or because it was interesting. A challenge would be building the Ch 58 TV station in Destin Florida about 15 years ago. The challenge was to move and rebuild a commercial RCA TTU-25B TV transmitter with few spare parts and no factory support. Interesting was building the Microdyne LEO earth station for NOAA, and the wideband receiver for the ISS.

Your "Warmest regards"? I doubt it. Its just another smarmy phrase to mislead people.

You can freeze to death outdoors in a lot of places if you don't wear
enough clothing to protect yourself. So what are you saying? You were
somehow real brave for being at Ft. Greely where it gets cold in the winter?

I think I got it now Cecil, my newsreader kept changing and setting settings, it would keep turning back on html instead of plain text, and turn on a "stationary" back ground (pretty pictures)--it would just ignore sending the message in plain text... a file msfix.xml had set an "email template" to do this, I have two outlooks, reg outlook and outlook2002--because on installing office XP, one sending though another--won't bore you with more details--deleting that file cured it... I think I picked up something from my "fans" which email me... it happens and I learned something... <grin>

Warmest regards,

You are just one of a small group of people that occupy a few newsgroups
at everyone else's expense. If you don't think the small click of people
you belong to does not drive other people away from contributing to the
amateur news groups you have a big surprise coming.

I'm not interested in "dealing" with obnoxious people like you.

No. He accused me of taking drugs. I've accepted that my life has changed, but I won't let someone like him make accusations about my character. I would have to be a coward to let it go unchallenged. I am adapting to the limitations, which are better than the alternative. SO what if I can't work 12 to 16 hours a day anymore? I'll take two or three over being stuck in a bed, or dead.

Amen! I just got back from a visit to the local veteran's cemetery.
I don't know any of the men and women buried there, but I have veteran
friends who will probably be there before me so I wanted to start
visiting it now.

I've got dialup, and it has frequent disconnects, so it is out of the question for me. It took three attempts to get the download for myself, but at least we have one site to go to.

Put the jerk in your kill file so you don't end up reading him. He is not worth your time. Some people just like to cause problems. The fact that people like him use a public forum where you can't see them face to face makes them the cowardly one when they denigrate you.

Yes, I am glad you mentioned it, I have never verbalized it before (or placed my agreement in text.)

But, a few times I have felt a seller has a "friend" bid against you to "hype" the price to a level he wants... What I can;t figure out, is a way to ever be able to prevent this--other than realizing what you are willing to pay, make the bid and let them go their merry way...

... and when they contact you back... tell 'em, "naaa, already got one!"

Warmest regards,

That is the right attitude. Their is no good reason to get upset over
some jerks posting on Usenet. There are some people that either don't
know how or care to behave in a public forum.

Apparently some people have a dark side that they give free rain to in a
forum that protects them from the consequences of their posts. Don't let
these people waste your time.

You are just one of a small group of people that occupy a few
newsgroups
at everyone else's expense.

You are as full of crap as a xmas turkey.

If you don't think the small click of people
you belong to does not drive other people away from contributing to the
amateur news groups you have a big surprise coming.

I don't belong to a "click"....I'm a big boy. I'll laugh at
your goofy ass all by myself. I don't need others help.

I'm not interested in "dealing" with obnoxious people like you

Good. Crawl back in your telahole, and I'll let you know if I
need to hear from you again. Jeez....What a preenus....

Well everytime Michael gets backed into a corner over something he
starts dragging out his medical problems looking for sympathy. I don't
wish medical problems on anyone, but I know some who make his medical
problems look like a head cold and they don't whine and complaine and
bring them up every time something doesn't go just to their liking.

We were in storm conditions this morning but even so I was getting some pretty good audio out of Wantok Radio 7120 in PNG.

By the way, in PNG "wantok" means friend.

Very good receiver, but too small for me, kind of scanner like.

I've owned a 7030 and 7030 plus, with all the kiwa mods and two extra kiwa premium filter modules. The synchronous detector isn't as good as the Drake R8B and they aren't quite as sensitive either. Lots of problems with the early production, since corrected.

Indeed - but it's an excellent DX receiver for travelling purposes - like if you're into bringing a suitable DX receiver along when travelling abroad or if attending a DX camp. Small size and the weight is ok.

Without a ground connected to a battery-operated portable receiver,
for example via the earphone socket, the input impedance at the
antenna socket is umpteen thousand ohms.

So it doesn't matter very much what you do about the whip.

But you knew that before you asked the question. So why ask it? ;o)

I would guess, in your younger days, you were a gifted, over-active
little boy who asked questions with a motive always different from the
obvious one.

It is indeed a very useful technique for gaining information about
which the subject may be reluctant to divulge. Perhaps you should have
been employed as a WMD inspector to discover that none existed years
before Saddam confessed that he never had any and had never possessed
the facilities to manufacture them.

But it's a dangerous occupation. The senior British WMD Inspector
committed suicide shortly after blowing the whistle - or so the story
goes. ;o) ;o) ;o) ;o)

Whilst on the subject of whip antennas you may be interested to run
program WHIP_1 which analyses performance, from transmitter to
receiver input, of a typical vehicle-mounted whip + un-un transformer
+ coax line + receiver.

This from a guy who blindly accepted some far right wing Newsmax
columnist's assertion about Chinese molecular nano superweapons that was
based on claims by the CCP? Get it straight, Li. Either the CCP is lying
or they are not. I tend to think that they're lying. I doubt they have
molecular nano superweapons. I doubt that anything that any dictatorship
claims can be trusted. In fact, I'd be willing to bet that even the US

govt lies outright a good percentage of the time.

You claim that double digit growth starting from zero is not impressive. But considering how backward China was 30 years ago, much like the Soviet Union was in the 80s, China's progress is remarkable indeed. Russia hasn't managed to turn things around as well as China has (at least economically speaking). Yes, salaries in China are low compared to the US. But in China, it takes a lot less money to live large than in the US. In India, many workers earn US$70 a month, but in India, that puts them solidly into the middle class. Meanwhile, Americans who make $50k a year struggle to pay their bills. It's all relative.

Source record: 23328

Since the HF/SW bands are trash this afternoon I
decided to tune around the LW/LF band and see what
I could find. I found a very strong DGPS FSK signal
on 317KHz. It is either Hartsville TN,or St. Paul MN.
See for a nation wide list of active DGPS stations:
http://www.navcen.uscg.gov/ado/DgpsCompleteConfiguration_tabular.asp

Does anyone know if there are any software programs
to decode the FSK? The DGPS stations are about evenly
split between 100 and 200 bps.

LF is much quiter then I expected for a May night.
Some distant lightning crashes, but not too bad with
the NB on.

Terry

There used to be a Tesla museum in Old Colorado City, next to Colorado Springs, CO. Funds ran out to maintain it or they lost their lease, can't remember which, but a lot of the items mysteriously dissappeared. I always meant to see it when visiting, but always something else conflicting. There has been talk about attempting to re-establish the museum. Tesla did a lot of his experminting in Colorado Springs. The city wasn't too happy with Tesla when one of his experiments took down the city power plant.

Poor old DeForest, couldn't even explain how his audion tube worked and
was such a lousy business man he lost several fortunes. He was often
taken in by con men.

After Armstrong's death his widow took up his patent fights and won most
of them, not that that did Armstrong any good, but would have made him
feel better.

> any Tesla experts out there ?

Well, I am not an expert on tesla but you
can download MANY of his unredacted
patents online.

Just doo a google search for "Tesla Patents" and
many sites will come up.

Tesla was curious as he believed in wireless power distribution
via high frequency electric fields. Some of his patents even
called for painting walls with conductive paint and charging
the same in an RF field!

Unfortunatly, such technology would never be applicable
today and the AC approach we have via Westinghouse
is the way to do things right.

Tesla was more of an experimenter than an inventor.
His work likely gave us the induction and RF furnace
we use today. The Edison System for lighting for
the era however was far better than Tesla's methods
for that day.

Tesla's COMPLETE Patent files can be
downloaded here FOR FREE --> http://www.keelynet.com/tesla/

All are in .PDF format

Anyhow, shibboleth's aside, went through the freqs.
that I was pointed to and didn't hear Bro. Stair.
Alot of religious programming though.
Did listen to Radio Netherlands a while.
I'm in South Florida so I've been picking up alot of Spanish stations.
After listening to local AM for about 10 years (haven't had a SW radio since
95)
it's a nice change.

Nice rundown, I'm kind of new at the terminology ,
but interesting.
I like the dial, had one on the old Sony analog radio
which I haven't been using since getting the Kaito.
The scan is a little slow, tried it but haven't used it much.

Yea, he electrocuted an elephant to demonstrate that AC was more
dangerous than DC. Boy would the activists have a field day with that
one today. It was pretty cruel even though the elephant was supposed to
be sick and about to die anyway.

I'm glad someone besides me can see this. I've always marvelled at the people that talk about 'sweat shops' in second and third world countries that pay very small percentages of what we make in the US being evil. Thing is, as you stated above, the standard of living in those countries allows for making much less money than in the US for a comparable lifestyle. In Thailand for instance, the median annual income is around $6000, yet most there still have most of the same conveniences we take for granted, and there are many US products available in the stores at much less than we pay for them.

I heard Bro. Stair this morning about 6:50. He was calling for radio checks. He was still on 5070 and I believe he said he was still on 7465 and a couple of other NON-WWCR SW frequencies. Seems he said WWCR promised to carry him till Wednesday and then that is to be IT. He's making the best he can of the WWCR frequencies by telling the world where they can find him on the competition's frequencies. :-)

5070 was booming into eastern NC this morning about that time. I think he got a call from FL that said they were getting it pretty good.

I have a file of copies of Armstrong's patents that were supposedely
used in some the Armstrong vs RCA ligitation. One I found quite amusing,
patent # 1,941,067 October 20, 1932 - Moses & Noblet Attorneys. It is
for a circuit to automatically mute a radio receiver during commercials.
Seems that at the station, when the switch is made from the studio mic
to the announcer's mic, a sub-audiable tone is transmitted on the
carrier along with the audio. A receiver equipped with Armstrong's
circuit will pick up the sub-audiable tone and activate a relay which
shorts out the speaker terminals, thus sparing the receiver owner the
trouble of turning down the volumn during commercials.

Can't you just hear the broadcasters howing about that one. Sure, they
are going to transmit a tone to kill the commercials that pay the bills,
you betcha.

Interesting you should bring up shibboleth. For those who don't know
it's in Judges 12, verses 1-6. Seems 42,000 people died that day but
probably not all because they could not say shibboleth. They were
saying sibboleth, leaving out the first h.

> for them.

Well, working conditions in China still aren't that great, and some of
the workplaces there would qualify as sweatshops by most measures of
working conditions, but they pay well enough for urban Chinese to enjoy
a pretty good standard of living. In the countryside, things are much
worse, however, since agriculture is still collectivized from what I
know, and most rural peasants barely scrape by. Most of the anger at the
CCP is in the countryside. Also, many Asian cultures will tolerate much
more political repression than Americans if they have lots of economic
freedom and lots of money. Look at Singapore-very rich, very capitalist,
yet very repressive politically. Vietnam is another prosperous Asian
nation where the Communist Party still rules with an iron fist. For
decades South Korea, where you live, was very repressed politically yet
very capitalist. Westerners tend to assume that capitalism and democracy
go together, I guess it's the result of decades of Cold War propaganda.
But that's not necessarily the case. Deng Xiaoping acheived what
Gorbachev could not-turn a communist country capitalist without chaos
breaking out and the whole society falling to pieces.

The shibboleth was off your post.
Maybe Talamon was messing with me because I'm new and
wouldn't be able to figure out the meter designations he gave.
Been awhile since college.

You are. It helps to have your very rich and powerful family backing you up. Daddy has been responsible for everything you've ever "achieved" in your pathetic life, including your sweetheart business deals and rigging the presidential vote in your favor-twice. JFK had the same advantages, but he was smart and had fortitude, both of which you lack. If you had half of JFK's problems you'd be wrapped in a straitjacket and packed away in a rubber room. And I'm just talking about the physical challenges, not the political ones.

As I understand it, he was in direct competition with Edison, and tried
to beat Edison in the marketplace. While he was innovative, most of his
innovations were impractical. He pushed for DC electrical power. Edison
won out in the marketplace because his ideas were practical.

The line between genius and insanity is very fine. That said, much of
what he proposed (broadcast power) wouldn't work, and much of the rest
is so wild and crazy that even today most people have no clue what he
meant.

Tesla IS revered in some circles. Tesla brand vacuum tubes used to be
made in the Czech Republic, and an 80s rock band was named after him.

Agreed on the working conditions. As far as rural versus urban living, this is often the case, even in more open and prosperous societies.

Gorby (whom I still think got the shaft, and did a lot to change the former USSR) never got the chance to make his reforms under his much more reasonable timetable. You can't change a disaster into a success overnight, which is what his political opponents were insisting he do. Had he been given the chance, I'm sure that Russia would be doing quite well by now. The man had guts, that's for sure.

Tesla pushed for AC power. Edisons generating plants were all DC. Edison's
most famous demonstration of how dangerous AC power was (and why we
shouldn't use it) was by using AC power to supply the electric chair.

Tesla had lots of wacky ideas. A lot of the stuff he proposed is still incomprehensible today even in our modern world. Does that make him crazy or beyond brilliant? I guess it's a matter of opinion. What I DO know is that Tesla tried to go head to head with Edison in the electric power market and failed. Japan DID try DC mains power, that's why voltage in Japan is 100v, but they couldn't make it work. A brilliant experimenter is not necessarily a brilliant inventor, and a brilliant inventor is not necessarily a brilliant businessman. Edison was all three. So was Lee DeForest, to an extent. Farnsworth never made much money off electronic TV. Armstrong never lived to see FM live up to its potential, in good part because Sarnoff's meddling drove him to suicide. Sarnoff didn't invent radio, but he made it widely used.

It's a fine table top receiver at the right price, which should be around $200 to $250.00 depending on condition. Take a look at the review on dxning.com for more information.

Huh? You can view any US patent online, at the US Patent Office
website, http://www.uspto.gov/patft

You will need to know the patent numbers, since anything before
a certain date (and all of Tesla's patents would be long before
that date) are graphic files and not searchable.

To be perfectly honest many receivers have a scan function, but I find it to be of little value on shortwave mostly because the threshold for stopping scan is way too high on all the receivers I've tried. It misses lots of weaker signals. Spinning the dial is in my experience a much better way to move through the dial. With one finger you can move through the band at any speed, stop, reverse, etc. Much more cumbersome and imprecise with a scan button.

Actually, Tesla may have been partially right. I've read that electrons
behave more like waves than particles. Certainly, real atoms bear little
resemblance to those billiard ball drawings that we all remember from
high school physics-neutrons are not neat clusters of little balls, and
electrons are not little balls that go around the atom nucleus in
perfect circles. But most school board members can't grasp the basics of
quantum physics, so they assume that the kids can't either, so the kids
get billiard ball drawings. I think that some Planck theory would liven
up senior year physics a little bit and get the kids to pay attention,
but that's a threat to insular admins, so... (you know the rest)

Diabetes is one NASTY disease. My grandfather has it, and he can't feel
his legs either. His hands feel like sandpaper. He doesn't need leg
braces though-yet. My uncle in law died of it. He would cut his feet,
and since he couldn't feel it they'd get infected.

While the current administration would like to make out that the "economy is strong", there seems to be mounting evidence that it is harder for people to increase there economic situation, move up the ladder of success, etc. Immigrants who used to only take 3 generations to get from where they are to the mainstream middle class are now expected to take six generations to do it, if at all. The country is, reportedly, becoming less of a meritocracy, where people move up based on their ability, and more of a "caste system" where people are born to an economic level, and move up only with great diffuculty.

See:

http://www.csmonitor.com/2005/0523/p17s01-cogn.html

This is probably at work for holding back a lot of potential amateurs. You don't go spending the money you might once have spent on a radio if you're 30 yrs old and a technical geek - you now spend it on the rent.

Prosperity is becoming more of a rare thing, with really staggaring numbers of jobs being shipped overseas because their workers will build a software program at a pay of $30K per year, compared with a worker here that gets $80K per year. The general "think" on this by the American public seems to be that the $80K SW engineer here is just too greedy, and deserves to be out of a job in preference to the $30K a year Indian or Russian or whoever. IOW, grassroots opinion is supporting the outsourcing.

So this is probably the basis for how this hobby, and a lot of other hobbies requiring the spending of significant cash, is going to fail - not for lack of personal interest or ability, but from an economic lack of ability to reasonably pursue the hobby. Yeah, we've always sat around and wanted a bigger

tower like Chief Brody wanted a bigger boat - but the basic stuff of ham radio, a decent transciever, is likely harder for the newer hams than it used to be for us. Heck, we had Heathkit! Now, people either don't have good jobs, or their present jobs are so uncertain that they won't spend the money and go in debt for the radio or tower or whatever.

So, welcome to the 21st Century.

What to do about it? The income tax is largely at work here. Corporate taxes make producing things here more expensive. Companies ship their jobs overseas where the aren't taxed so much - if India were to tax a worker there 50%, and take that $30K a year SW engineer down to $15K, is that more or less expensive overall than using the Stateside SW engineer at a 28% rate for that level of salary. 28% of $80K is $22,400. So, that's _more_ $$$ down the drain for taxes here than a 50% tax overseas would be.

Get rid of the income tax, and espcially the corporate income tax, and replace it with a sales tax, and all of a sudden that cheap accounting software package from India that used to cost $200 now costs maybe $260. In the meanwhile, the equivalent product built here, for $250 or so, first has its price go down from the USA-based company not having to pay income tax, and then add the sales tax percentage, and you get a _much_ more competitive USA-built piece of software.

Hooray! Its what we need now... I mean _NOW_.

>I will leave the speculation and 'hard data' gathering processes to
>others who show an interest in data processing. Their efforts will be of
>little value in the long term scheme, other than they gathered some
>numbers and percentages that have little, if any, value in the long run.
>
>Meanwhile, catch me on the HF bands. I'll leave the overcrowded two
>meter repeaters to the handi-talkie newbies.

Well, there's nothing wrong with repeaters, handi-talkies, and newbies. We need the newbies, and having lotsa repeaters is a _good_ thing.

This is 2nd hand from a local ham telling the story of an emergency exercise involving FEMA and a communications network over a local repeater. Everything was going outstandingly when the FEMA guy thought he'd throw a monkey wrench into the works. He went over to the net control guy and told him to simulate the repeater going down. Net control just called the guy with the biggest home signal and told him to tell everybody to go to another local repeater, and the net was back on the air pretty much without skipping a beat. The FEMA fellow said, "How'd you _do_ that?" NC just smiled and said, "Hey, we have backups!"
>
>All the more reason to upgrade.

Always a good idea.

The inventor of toilet paper had a hell of a time selling his invention.
People thought, why waste clean paper when a page from last year's Sears
catalog would do just as well? That was about a hundred years ago. Plus
the toilet paper had splinters (ouch).

I always viewed it as a situation where events got away from him. China
was able to make the transition mostly without the West noticing. Russia
had the US hounding them, plus 15,000 nukes pointed at their heads with
the person at the switch avidly reading Hal Lindsey. On top of that,
Russians had been listening to VOA for 30 years and wanted all of
America's goodies right now. Gorby's situation was a lot less favorable
for a successful transition to capitalism than Deng's.

Thanks for the reference, Bill. I did learn something of value from it but the devices are clearly intended for audio frequency although one might actually support 0dB gain at 455kHz! However, they are a closed loop system and it's not obvious that one could bring out the required control voltage to drive the receiver AGC.

Regards,

Tom

Thanks, I mixed them up. Edison also did big demonstrations where he
electrocuted animals.

As far as I remember, he was promised so many dollars per horsepower delivered
by his motors. Neither company kept their half of the bargain.

> As I understand it, he was in direct competition with Edison, and tried
> to beat Edison in the marketplace. While he was innovative, most of his

Tesla brought us **AC** power. It was Edison who had a vested interest in DC. He
even put on public demonstrations by killing animals with AC to try and frighten
the public into staying with DC.

>>>The only reason he may be mistakenly seen as a 'nut' may well be due to the
>>>lunatic free power fringe who have attached themselves to his name.
>>
>>
>> He went insane after his first couple sucesses. Broadcast power
>>would stop you from using a radio or TV set,

Why? it would all depend on frequency and harmonics. A coexistence could have
been achieved.

>>and the losses were
>>horrendous. The power is reduced by 75% every time you double the
>>distance.

Not once an equilibrium is reached, which is what he was after. The sparking
would have been greatly reduced at that point. Not all the power being
transmitted was to be used simultaneously. As far as I see it, the idea was
dropped because metering the consumption would have been very difficult, if not
impossible.

.

>> An "Earthquake machine" that one man could carry? Come on, even YOU
>>have to see the insanity there!

Even me? Thank you.

Resonance works very well at shaking things apart. A wind at just the right speed brings down power lines that can withstand huge ice loads. A line of Soldiers break stride to cross footbridges.

Look at what a little wind can do:
http://www.ketchum.org/bridgecollapse.html
http://www.answers.com/topic/tacoma-narrows-bridge-2

A four year old child can set a swing with a two hundred pound adult on it in motion. You just have to reinforce the natural cycle of the swing.

Remember the story of a singer shattering a glass with her voice?
http://www.answerbag.com/q_view.php/11062

With all this, I believe it's quite possible to start tremors and earthquakes with the proper frequency.

Well, he had over a hundred and ten US patents issued. That doesn't include the stuff he didn't get credit for at Edison or Westinghouse.

http://www.corrosion-doctors.org/Biographies/TeslaBio-Patents.htm

If that is wild and crazy, I'd give my eye teeth to be that insane.

Yeah, YHWH is one nasty fucker. According to one Bible translation, he killed 70,000 people because they didn't sufficiently rejoice when they heard His Name. Strange thing is, most Jews I've met have been much nicer than their god.

Yeah, PETA would never forgive Edison for electrocuting animals. "Edison wears smoking fur!" I've heard that animals (including human animals) who are electrocuted actually cook like a steak. That's gotta hurt.

> crazy or beyond brilliant? I guess it's a matter of opinion. What I DO
> know is that Tesla tried to go head to head with Edison in the
> electric power market and failed.

Uhh... that's exactly opposite of how it happened. It was EDISON who failed in the long run, as DC transmission was completely impractical over long distances.

The core design of the entire polyphase AC power distribution system we use today is Tesla's, and Tesla's alone. He invented the 3-phase AC generator, the synchronous AC motor, and the step-up / step-down transformer. Even more importantly, Tesla derived the extremely complex network equations necessary to build a reliable large-area interconnected power transmission grid with multiple generating stations. For the time, that was a stunning achievement in applied mathematics.

Tesla had patents on all of these inventions. His "failure" was as a businessman. He sold the patents to George Westinghouse for a pittance, and was put on Westinghouse's payroll as a "consultant". Westinghouse had the manufacturing capacity to turn Tesla's concept into a working system, and the marketing acumen to sell it. Westinghouse became a very wealthy man in the process. The Tesla/Westinghouse AC system quickly dominated, driving the Edison DC system into obscurity. Tesla unfortunately, never received more than tiny fraction of the profits that Westinghouse made from his invention.

There's no question that Tesla "went off the deep end" in many ways later in his life, but his design of the polyphase AC power system was an outstanding success - in no way could it be said that he was "defeated" by Edison.

Decent receiver and even better if you do the few of the simple modifications posted on the R-2000 Resource Site (try typing this in Google). On par with the FRG-8800 of the same era.

Toilet paper got its big break when the Wilson War Department decided to
issue toilet tissue to the doughboys, much to the amazement of the
Tommies and Poilus. Fritz's attitude is unrecorded. I dunno how well
a roll of tissue did in the mud of France.

Tivo, 1930s style. :) I think that some people are just too smart for
their own good. FM worked, and worked great, but Sarnoff killed it off
for 25 years, until baby boomers discovered that Jimi Hendrix sounded a
lot better on FM than AM. I know that in 1965 a lot of FM stations were
broadcasting classical music all day, meaning that FM was strictly for
the audiophile. It took hippie rock to make FM commercially feasible.
Thank Sarnoff for this (and for killing Armstrong). It could be said
that FM worked TOO well, and Sarnoff could see it relegating AM to a has

been method of transmitting. So to preserve RCA's investment in music playing AM stations, he forced the FCC to move the FM band and hounded Armstrong until Armstrong jumped off a Manhattan skyscraper. But Sarnoff didn't see the advent of electric guitar hippie rock.

They draw a crowd alright, the wife and I go there every now and then but you hardly ever see any radio gear there. There is one fellow who shows up just about weekly with some really nicely restored 30's and 40's radios but nothing exotic, think I saw a DX-160 there once and it looked like it had been around the block a few times. RM~

PS, Don't want to get in the biz, just want to get rid of a 40 + year accumulation without having to pack it and ship it. I wind up on short end every time I ship something.

< Snip >

I'm not messing with you. This is basic terminology not something
exotic. The majority of short wave broadcasts occur in designated bands
of frequencies. The bands are identified by the inverse of a rounded
frequency in the band. This is how the broadcast bands are identified.

wavelength = speed of propagation/frequency

In oder to calculate in meters the formula is
wavelength in meters = (300 meters/sec) / (frequency in MHz/sec)

so 60 meters is 5 MHz. The 60 meter band is 4.750 MHz to 5.060 MHz

BAND MEGAHERTZ (MHz) KILOHERTZ (KHz)

120 m 2.300-2.500 MHz 2300-2500 KHz
90 m 3.20-3.40 MHz 3200-3400 KHz
75 m 3.90-4.00 MHz 3900-4000 KHz
60 m 4.750-5.060 MHz 4750-5060 KHz
49 m 5.950-6.20 MHz 5950-6200 KHz
41 m 7.10-7.60 MHz 7100-7600 KHz
31 m 9.20-9.90 MHz 9500-9900 KHz
25 m 11.600-12.200 MHz 11600-12100 KHz
22 m 13.570-13.870 MHz 13570-13870 KHz
19 m 15.10-15.80 MHz 15100-15800 KHz
16 m 17.480-17.90 MHz 17480-17900 KHz
13 m 21.450-21.850 MHz 21450-21850 KHz
11 m 25.60-26.10 MHz 25600-26100 KHz

By knowing the wavelength of a frequency you get an understanding of the
size of the resonant antenna to receive it.

Hi Terry,
go to the following site:
http://www.beaconworld.org.uk/download.htm
then near the bottom is a section called DGPS Databases and Articles. Within
that is a pdf file called Introduction to DGPS DXing. This should answer a
lot of questions about DGPS and it talks about software for decoding it.
This site is excellent for info about LW in general.

I just spoke with Richard Hillier of AOR UK. He confirmed that the 7030 should not be displaying any of the overload problems I'm encountering, and he suspects that it is indeed the SD5400 mixer that's the problem. He also noted something that should interest other 7030 owners out there: namely, that the SD5400 mixer is *very* static sensitive. In fact, he suspects that mine was damaged when it got zapped at some point....this is apparently the way it happens most of the time.So, whenever your plugging in external speakers, headphones or anything like that, be very careful!

2854. Re: AGC Design?

Newsgroup: rec.radio.shortwave
Date: 2005-05-31 12:05:38 UTC
From: Richard Hosking <richardh@iinet.net.au>
Message-ID: <429c5313$0$5113$5a62ac22@per-qv1-newsreader-01.iinet.net.au>
Source record: 23488
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.shortwave

I have struggled with this in the past
It is a function of the behaviour of the servo loop at low freq and I
dont have the theory to analyse it properly.
However, the most successful AGC system I used in a DC receiver had a T
attenuator as the control element, consisting of resistors on the
horizontal arms of the T with a Darlington pair to ground as the control
element. This was driven by Opamp -> rectifier (BE junction of a 2N3904)
driving an emitter follwer driving a conventional RC circuit. It seemed
that when you got rid of any DC shift in the system this fixed the
problem. As a bonus you got a surprisingly accurate log detector(over
about 60bB range) for an S meter. The difficult part in all systems
seems to be the control element.

Richard

And today, after 1300 they can't even seem to get the transmission going via French Guiana. I've noted them coming on in the past around 1303-5, but today no trace of them yet and it's 1320.

Pretty soon no SW listeners at all!

Personally, I'd rather have one with meters, but 7 amps is probably more than enough unless you're looking to run several receivers at once or take up arc welding as a hobby.

Otherwise, as far as I know, Astron has a reputation for making good quality power supplies.

It certainly is a design flaw, in my opinion, to have a critical component be so vulnerable to static electricity. Of course any receiver is going to have to have its weak points, but you shouldn't have to worry every time you plug in an external speaker or a set of headphones. That's just common sense.

If there's ever a 7030++, maybe they'll farm some work out to the Drake designers....

Kind of like the Sony 2010 which seemed prone to static electricity as well.

Yeah, the AOR-Drake R9.... and hopefully Drake would put a 'real' S meter on it.

> against civilian populations that we see in Iraq.

Tarleton took care of that. As did some of the "rouse up
the Indians against the colonists", as well.

> Also, there was no religious component to the colonial rebellion;
> they wanted self rule and freedom from taxes, not a religiously
> pure state. No suicide missions, either.

There was some religious component to the WoI, but that's
because the world was different then. The religious
component was more obvious in the ACW than the WoI,
but the concept of things like Days of Prayer and the revival
movement of the 1760's had impacts.

As for suicide missions, you could consider The Turtle a
suicide mission, but not a religious one.

The RCB-2000 and DR-2000 family were a team effort that took half of
the engineering department over a year to design, then the best techs in
the company were assigned to the project to smooth the rough edges to
turn it into a manufacturable product, which took another six months
before were were in actual production. The early units were hand
assembled by the engineering department. Its an expensive receiver, but
the military and NASA like them because they can be reprogrammed for
different applications without sending a radio back to the factory for
modifications.

We went through that with the 1200 series. A microprocessor
controlled front panel was designed for the -B rev and a customer
decided they wanted their 100+ units modified so they could use the
remote control functions. It required the radio to be completely
rebuilt to change the wiring harness, nd add the new front panel with
the new chassis layout. I miss ripping a commercial design apart to see
what I could do to make it better. :(

RHF - I understand EOT, but you stated 20:11 hours and since I am in a time zone approximately 18 hours ahead of you, I would not want to shortchage you by having it all happen 18 hours earlier than predicted. will it occur at 20:11 hours in each time zone? Will that mean it stops for an hour and waits until the next timezone turn 20:11?

Brad.

2875. American Patriot "Deepthroat" is Revealed

Newsgroup: rec.radio.shortwave
Date: 2005-05-31 21:05:59 UTC
From: Anonymous-Remailer@See.Comment.Header
Message-ID: <O99LZ3YZ38503.6708217593@anonymous.poster>
Source record: 23609
Cross-posted to: alt.politics.bush,rec.radio.shortwave

http://apnews.myway.com/article/20050531/D8AEALP80.html

NEW YORK (AP) - A former FBI official claims he was "Deep Throat," the long-anonymous source who leaked secrets about President Nixon's Watergate coverup to The Washington Post, Vanity Fair reported Tuesday.

W. Mark Felt, 91, who was second-in-command at the FBI in the early 1970s, kept the secret even from his family until 2002, when he confided to a friend that he had been Post reporter Bob Woodward's source, the magazine said.

"I'm the guy they used to call Deep Throat," he told lawyer John D. O'Connor, the author of the Vanity Fair article, the magazine said in a news release.

Felt was initially adamant about remaining silent on the subject, thinking disclosures about his past somehow dishonorable.

"I don't think (being Deep Throat) was anything to be proud of," Felt indicated to his son, Mark Jr., at one point, according to the article. "You (should) not leak information to anyone."

Felt is a retiree living in Santa Rosa, Calif., with his daughter, Joan, the magazine said. He could not immediately be reached for comment by The Associated Press. His family members disagreed with their father, feeling that he should receive accolades for his role in Watergate before his death.

The Washington Post had no immediate comment on the report.

O'Connor is a lawyer at the San Francisco firm Howard, Rice, Nemerovski, Canady, Falk & Rabkin. A receptionist there said O'Connor was out of the office but confirmed he was the author of the Vanity Fair article.

The existence of Deep Throat, nicknamed for a popular porn movie of the early 1970s, was revealed in Woodward and Carl Bernstein's best-selling book "All the President's Men." In the hit movie based on the book, Deep Throat was played by Hal Holbrook.

But his identity of the source whose disclosures helped bring down the Nixon presidency remained a mystery.

Among those named over the years as Deep Throat were Assistant Attorney General Henry Peterson, deputy White House counsel Fred Fielding, and even ABC newswoman Diane Sawyer, who then worked in the White House press office. Ron Zeigler, Nixon's press secretary, White House aide Steven Bull, speechwriters Ray Price and Pat Buchanan, and John Dean, the White House counsel who warned Nixon of "a cancer growing on the presidency," also were considered candidates.

And some theorized Deep Throat wasn't a single source at all but a composite figure.

In 1999, Felt denied he was the man.

"I would have done better," Felt told The Hartford Courant. "I would have been more effective. Deep Throat didn't exactly bring the White House crashing down, did he?"

In 2003, Woodward and Bernstein reached an agreement to keep their Watergate papers at the University of Texas at Austin.

At the time, the pair said documents naming "Deep Throat" would be kept secure at an undisclosed location in Washington until the source's death.

It happened more than once in history. During a revolt on Corsica
or Sardinia they had a variant pronunciation for some kind of bean
(vegetable) that got your throat slit if you didn't say it the right way.
"ciciri" or some thing like that.

That was back in the days when the press was allowed to come forward with the truth. Sadly those days are gone. Now days the rightwing controlled media just shouts down the reporters with calls of traitor. Little things like Bush's advanced plan to attack Iraq with made up evidence of WMD's are just not to be addressed. Nixon planned and executed some breakins, buggings, and did a lot of lying. FOXnews would just blow this off as liberals hating America and that would be as far as it would go today. The rest of the media would check their ratings and go back to desperate housewives and making sure Jants titty wasn't flopping out.

Real news is what shortwave radio is for. I always find it interesting
to watch TV "news" (actually entertainment) and then listen to the BBC.
Even though the BBC has its bias, it's still a better news organization
than American TV. And occasionally even Radio Havana has scooped
American TV by several days.

American news no longer is, now Walter Cronkite was a newscaster... all
the pimps and bozo's in their wigs and makeup today are a joke--they
think we are all their "fans" out here, admiring them and want them to
do cutsie things to entertain us--so that is all they give us...

... they think no one notices--some of us do...

Regards,
John

Facts is facts and these be facts. He did some great work in the diplomatic front. T'is been said and I believe it, "Only Nixon could have gone to China."
IMHO, his work with China will still have the best and deepest long term affects of any diplomatic effort of any President in our modern times.

However he also let his (in)famous paranoia get the best of him and tried to rig an election by burglarizing and bugging the HQ of the opposition party. That fact also be a fact.

Oh, nixon was a traitor and should have been hung--he was all about
greed and corruption--so was clinton--clinton is directly responsible
for the chinese now having ICBMs which can reach this continent
effectively--I am amazed george is showing his true colors--he must
really be no better when he allows clinton to participate in anything...
I am afraid all these men are only puppets of a much more sinister and
invisible monster--one which probably identifies with no single nation
or people and owes no allegiance to any specific peoples, nation or
continent--but then that is beginning to sound like a conspiracy theory,
isn't it...

... rather the hero is deep throat...

Warmest regards,
John

Sadly, he actually did so much more than that. He set up
a shadow cabinet to work out ways of carrying out his
extreme policies without the knowledge or consent of
Congress. Bastard probably had Hendrix killed too.

Oh yea he made some big mistakes and it's too bad because he had the makings
to possibly have been one of the better presidents but maybe if he hadn't of
screwed up presidentialy he might not have ended up being as great diplomat.
I mean maybe his failure as a president pushed him to be a great diplomat to
make up for his bad term as President? Who knows?

The usual bullshit from a brainwashed believer. The fact is that the 60's and early 70's were characterized by presidents who felt that it was their prerogagive to lie to the American people. Johnson made up stories about the Bay of Tonkin in an attempt to justify further war against the Vietnamese, but the book "The Pentagon Papers" told the truth and drove that Democrat out of office.

Later, the Republican named Nixon engaged in the same arrogance and suffered an even worse fate when he was outed by Deep Throat and was revealed as a petty breakin apologist.

The nonsense of course hasn't stopped. Clinton left cum all over the dress of an almost underage intern and then told lies about it. He later got impeached for lying under oath to a Federal court.

Knotheads who sit back and impugn a particular party are a big part of the problem. There is blame enough to go all around, and yet they refuse to see it.

Until they do, the turds in Washington will continue to screw the citizens of this country. The turds belong to both parties, and only fools think otherwise.

And that, sir, makes you a fool.

... see above, this thread started "talking" about DEEP THROAT being a
PATRIOT (hero), I never thought that changed...

Warmest regards,
John

It will serve you well for decades.

I am not a big fan of MOV over voltage protectors,
but it might be well worth the few dollars it will
take to add on between the Astron and the wall outlet.

Terry
